Fig. 622: Identifying O-Ring, Input Shaft And Speed Sensor With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

67. Install the new O-ring (C) on the output shaft (countershaft) speed sensor (D), and install the output shaft (countershaft) speed sensor and the sensor washer (E).
68. Install the 4th clutch transmission fluid pressure switch (A) with the new sealing washer (B). Tighten the switch with the metal part.

Fig. 623: Identifying 4Th Clutch Transmission Fluid Pressure Switch And Sealing Washer With Torque Specificaiton
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

69. Install the 3rd clutch transmission fluid pressure switch (A) with the new sealing washer (B). Tighten the switch with the metal part.

Fig. 624: Identifying 3rd Clutch Transmission Fluid Pressure Switch And Sealing Washer With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

70. Install the ATF cooler lines (C) with the new sealing washers (D) and the line bolts (E).
71. Install the connector bracket (F), and secure the ATF lines with the 6.0 mm bolts (G) on the transmission housing.
72. Install the ATF temperature sensor (H) with the new O-ring (I). Install the connector on the connector bracket and the harness clamp on the bracket.
73. Install the 2nd clutch transmission fluid-pressure switch (A) with the new sealing washer (B). Tighten the switch by the metal part.

Fig. 625: Identifying 2nd Clutch Transmission Fluid-Pressure Switch And Sealing Washer With Torque Specificaiton

Courtesy of AMERICAN HONDA MOTOR CO., INC.

74. Install the ATF dipstick guide pipe (A) with the new O-ring (B).

Fig. 626: Identifying ATF Dipstick Guide Pipe And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

75. Install the ATF dipstick (C) in its guide pipe.
76. Install the transmission ground terminal (D).

A/T DIFFERENTIAL

COMPONENT LOCATION INDEX

Fig. 627: Identifying A/T Differential Component
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BACKLASH INSPECTION

1. Remove the final driven gear and transfer drive gear from the differential carrier.
2. Install both axles into the differential assembly (A) and place the axles on V-blocks (B).

Fig. 628: Identifying Backlash Of Pinion Gears With Dial Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the backlash of the pinion gears (C) with a dial indicator (D).

Standard (New): 0.05-0.15 mm (0.002-0.006 in.)

4. If the backlash is out of standard, replace the differential carrier.
5. Install the final driven gear and transfer drive gear on the differential carrier (see **DIFFERENTIAL CARRIER, FINAL DRIVEN GEAR, AND TRANSFER DRIVE GEAR REPLACEMENT**).

DIFFERENTIAL CARRIER, FINAL DRIVEN GEAR, AND TRANSFER DRIVE GEAR REPLACEMENT

NOTE: **Inspect and adjust the bearing preload whenever the carrier is replaced.**

1. Remove the final driven gear (A) and transfer drive gear (B) from the differential carrier (C).

NOTE: **The final driven gear bolts have left-hand threads.**

Fig. 629: Identifying Final Driven Gear, Transfer Drive Gear And Differential Carrier With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the final driven gear on the differential carrier in the direction shown. The letter on the final driven gear must match the letter on the top of the countershaft. They are a matched set.
3. Install the bolts through the differential carrier to the transfer drive gear.
4. Tighten the bolts to the specified torque in a crisscross pattern.

CARRIER BEARING REPLACEMENT

Special Tools Required

Attachment, 45 x 55 mm 07MAD-PR90100

NOTE:

- The bearing and outer race should be replaced as a set.
- Inspect and adjust the bearing preload whenever the bearing is replaced.
- Check the bearing for wear and rough rotation. If the bearing is OK, removal is not necessary.

1. Remove the carrier bearing (A) with a commercially available bearing puller (B), bearing separator (C), and stepper adapter (D).

Fig. 630: Identifying Carrier Bearing, Bearing Puller, Bearing Separator And Stepper Adapter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new carrier bearing using the attachment (45 x 55 mm) and the press.

NOTE:

- Press the bearing on until it bottoms.
- Use the small end of the attachment (45 x 55 mm) to install the bearings.
- Press the bearing on securely so there is no clearance between the bearing and the differential carrier.

Fig. 631: Identifying Carrier Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OIL SEAL REPLACEMENT

Special Tools Required

- Driver 07749-0010000
- Oil seal driver attachment 07GAD-PG40101

- Oil seal driver attachment 07JAD-PH80101

1. Remove the oil seal from the transmission housing.

Fig. 632: Identifying Oil Seal Of Transmission Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the oil seal from the torque converter housing.

Fig. 633: Identifying Oil Seal Of Torque Converter Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the new oil seal flush to the transmission housing using the drive and the oil seal driver attachment.

Fig. 634: Identifying Oil Seal Flush To Transmission Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the new oil seal to the torque converter housing using the drive and the oil seal driver attachment.

Fig. 635: Identifying Oil Seal To Torque Converter Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CARRIER BEARING OUTER RACE REPLACEMENT

Special Tools Required

- Driver 07749-0010000
- Attachment, 83 mm 07HAD-SG00100
- Attachment, 78 x 80 mm 07NAD-PX40100

NOTE:

- Replace the bearing with a new one whenever the outer race is replaced.
- Do not use shim(s) on the torque converter housing side.
- Adjust the preload after replacing the bearing and the outer race.
- Coat all parts with ATF during installation.

1. Remove the bearing outer race (A), spacer (B), and 85 mm thrust shim (C) from the transmission housing (D) by heating the housing to about 212 °F (100°C) with a heat gun (E). Do not heat the housing more than 212 °F (100°C).

Fig. 636: Identifying Bearing Outer Race, Spacer (And Thrust Shim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the 85 mm thrust shim (A), spacer (B), and outer race (C) in the transmission housing (D).

Fig. 637: Identifying Thrust Shim, Spacer, Outer Race And Transmission Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using the driver and the attachment (83 mm), drive the outer race securely in the housing so there is no clearance between the outer race, spacer, shim, and housing.

Fig. 638: Identifying Housing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the plate (A), and remove the bearing outer race (B) and spacer (C) from the torque converter housing (D).

Fig. 639: Identifying Plate, Bearing Outer Race, Spacer And Torque Converter Housing With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the spacer and the new outer race in the torque converter housing.
6. Drive the bearing outer race securely in the housing using the driver and the attachment (78x80 mm).

Fig. 640: Identifying Spacer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the plate over the outer race in the torque converter housing.

CARRIER BEARING PRELOAD INSPECTION

Special Tools Required

- Driver 07749-0010000
- Attachment, 83 mm 07HAD-SG00100
- Preload inspection tool 070AJ-0020101

NOTE: If the transmission housing, torque converter housing, differential carrier, tapered roller bearing, bearing outer race, or thrust shim were replaced, the bearing preload must be adjusted.

1. Remove the bearing outer race (A), spacer (B), and 85 mm thrust shim (C) from the transmission housing (D) by heating the housing to about 212 °F (100 °C) with a heat gun (E). Do not heat the housing more than 212 °F (100 °C).

NOTE: Let the transmission housing cool to room temperature before adjusting the bearing preload.

Fig. 641: Identifying Bearing Outer Race, Spacer, And Thrust Shim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Replace the tapered roller bearing when the outer race is to be replaced.
3. Do not use a shim on the torque converter housing side.
4. Install the 85 mm thrust shim (A) in the transmission housing (B). If you replace the 85 mm thrust shim with a new one, use the same thickness shim as the old one.

Fig. 642: Identifying Thrust Shim In Transmission Housing
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the spacer (C), and the bearing outer race (D) in the transmission housing.
6. Drive the outer race securely in the housing using the driver and the attachment (83 mm) so there is no clearance between the outer race, spacer, shim, and housing.

Fig. 643: Identifying Spacer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the differential assembly (A) in the torque converter housing (B), and install the gasket (C) and the two dowel pins (D) on the housing.

Fig. 644: Identifying Differential Assembly With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the transmission housing (E), and install the mounting bolts (24 bolts) with the transmission hanger (F) and the ground terminal bracket (G), then tighten the bolts.
9. Rotate the differential assembly in both directions to seat the bearings.
10. Measure the starting torque of the differential assembly with the preload inspection tool, a torque wrench (A), and a socket (B). Measure the starting torque at normal room temperature in both directions.

Standard

New bearings:

3.9-5.1 N.m (40-52 kgf.cm, 35-45 lbf.in.)

Reused bearings:

3.6-4.8 N.m (37-49 kgf.cm, 32-43 lbf.in.)

Fig. 645: Identifying Starting Torque Of Differential Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. If the measurement is out of standard, remove the thrust shim and measure its thickness.
12. Select a new thrust shim. To increase the starting torque, increase thickness of the thrust shim.

To decrease the starting torque, decrease the thickness of the thrust shim. Changing the shim to the next size will increase or decrease the starting torque about 0.5-0.6 N.m (5-6 kgf.cm, 4-5 lbf.in.).

THRUST SHIM, 85 mm

41484-RGR-000	1.325 mm (0.0522 in.)
---------------	-----------------------

13. Install the new thrust shim, then recheck the starting torque.

TRANSFER OUTPUT SHAFT

COMPONENT LOCATION INDEX

Fig. 646: Identifying Transfer Output Shaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSFER OUTPUT SHAFT BEARING REPLACEMENT

Special Tools Required

Driver, 40 mm I.D. 07746-0030100

1. Remove the transfer output shaft bearing (A) with a commercially available puller (B), bearing separator (C), and shaft protector (D). Place a shaft protector between the transfer output shaft and the puller to prevent damaging the shaft.

Fig. 647: Identifying Transfer Output Shaft Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new bearing (A) on the transfer output shaft with the using the driver (40 mm I.D.) and the press.

Fig. 648: Identifying Bearing On Transfer Output Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OIL SEAL REPLACEMENT

Special Tools Required

- Driver 07749-0010000
- Attachment, 65 mm 07JAD-SH30100

1. Remove the oil seal from the torque converter housing.

Fig. 649: Identifying Oil Seal Of Torque Converter Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new oil seal flush to the torque converter housing using the driver and the attachment (65 mm).

Fig. 650: Identifying Oil Seal Flush To Torque Converter Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSMISSION HOUSING BEARING REPLACEMENT

Special Tools Required

- Driver 07749-0010000
 - Attachment, 72 x 75 mm 07746-0010600
1. Remove the transfer output shaft bearing (A) from the transmission housing (B) by heating the housing to about 212 °F (100 °C) with a heat gun (C). Do not heat the housing more than 212 °F (100 °C).

Fig. 651: Identifying Transfer Output Shaft Bearing Of Transmission Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new bearing in the housing in the direction shown.

Fig. 652: Identifying Bearing In Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Drive the new bearing until it bottoms in the housing using the driver and the attachment (72 x 75 mm).

Fig. 653: Identifying Bearing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSFER OUTPUT SHAFT INSTALLATION HEIGHT INSPECTION/ADJUSTMENT

NOTE: If the transfer output shaft, transfer output shaft bearing, transfer output shaft transmission housing bearing, transmission housing, or torque converter housing were replaced, adjust the transfer output shaft installation height with the 28.5 mm thrust shim.

1. Install the transfer output shaft (A) in the torque converter housing, and install the 28.5 mm thrust shim (B) on the top of the shaft. If you replace the 28.5 mm thrust shim with a new one, use the same thickness shim as the old one.

Standard: 46.31-46.35 mm (1.823-1.825 in.)

Fig. 654: Identifying Transfer Output Shaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Transfer Output Shaft Cutaway View

Fig. 655: Identifying Transfer Output Shaft Cutaway View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new gasket (C) on the torque converter housing.
3. Measure the height (D) of the transfer output shaft installation between the surface (E) of the gasket and the top (F) of the 28.5 mm thrust shim in at least three places. Use the average as the actual height.
4. If the measurement is out of standard, remove the 28.5 mm thrust shim and measure its thickness.
5. Select and install a new thrust shim, then recheck the installation height.

THRUST SHIM, 28.5 mm**THRUST SHIM THICKNESS SPECIFICATION**

No.	Part Number	Thickness
A	29031-RDK-000	1.82 mm (0.0717 in.)
B	29032-RDK-000	1.84 mm (0.0724 in.)
C	29033-RDK-000	1.86 mm (0.0732 in.)
D	29034-RDK-000	1.88 mm (0.0740 in.)

O	29045-RDK-000	2.10 mm (0.0827 in.)
P	29046-RDK-000	2.12 mm (0.0835 in.)
Q	29047-RDK-000	2.14 mm (0.0843 in.)

R	29048-RDK-000	2.16 mm (0.0850 in.)
S	29049-RDK-000	2.18 mm (0.0858 in.)
T	29050-RDK-000	2.20 mm (0.0866 in.)
U	29051-RDK-000	2.22 mm (0.0874 in.)
V	29052-RDK-000	2.24 mm (0.0882 in.)
W	29053-RDK-000	2.26 mm (0.0890 in.)
X	29054-RDK-000	2.28 mm (0.0898 in.)
Y	29055-RDK-000	2.30 mm (0.0906 in.)
Z	29056-RDK-000	2.32 mm (0.0913 in.)
AA	29057-RDK-000	2.34 mm (0.0921 in.)

TRANSFER ASSEMBLY

INSPECTION

Transfer Gear Backlash Measurement

1. Set a dial indicator (A) on the transfer companion flange (B); position the dial indicator tip (C) on the direct extension of the bolt hole center (D).

Fig. 656: Identifying Transfer Gear Backlash
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Measure the transfer gear backlash.

Standard: 0.06-0.16 mm (0.02-0.06 in.)

Total Starting Torque Measurement

3. Secure the transfer housing (A) in a bench vise (B) with soft jaws. To prevent damaging the transfer housing, always use soft jaws or equivalent materials between the transfer housing and the vise.

Fig. 657: Identifying Total Starting Torque
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rotate the companion flange several turns to seat the tapered roller bearings.
5. Measure the starting torque at the companion flange (C) with a torque wrench (D) and a socket (E).

Standard: 2.64-4.23 N.m

(26.9-43.1 kgf.cm, 23.3-37.4 lbf.in.)

6. If any of the pressures are out of standard, disassemble the transfer assembly and repair it.

DISASSEMBLY

Exploded View

2008 Acura MDX

2007-09 TRANSMISSION Automatic Transmission - MDX

Fig. 658: Exploded View Of Transfer Housing With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

Companion flange holder 07XAB-0010101

NOTE: Refer to the Exploded View as needed during the following procedure.

1. Remove the transfer cover (A) from the transfer housing (B).

Fig. 659: Identifying Transfer Cover Of Transfer Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the transfer hypoid drive gear/shaft assembly (C), 25 mm thrust shim (D), and tapered roller bearing (E).
3. Remove the O-ring (F) from the cover.
4. Drain the transfer fluid (hypoid gear oil) from the transfer housing.
5. Cut the lock tab on the locknut using a chisel.

Fig. 660: Identifying Lock Tab On Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Secure the transfer housing (A) in a bench vise (B) with soft jaws. To prevent damaging the transfer housing, always use soft jaws or equivalent materials between the transfer housing and the vise.

Fig. 661: Identifying Transfer Housing In Bench Vise
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the companion flange holder on the companion flange, then loose the locknut.
8. Remove the companion flange holder.
9. Remove the locknut (A), conical spring washer (B), back-up ring (C), O-ring (D), and companion flange (E) from the transfer output shaft (hypoid gear) (F).

Fig. 662: Identifying Locknut , Conical Spring Washer, Back-Up Ring, O-Ring, And Companion Flange
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the transfer output shaft (hypoid gear) (A) from the transfer housing (B), then remove the thrust washer (C) and transfer spacer (D) from the transfer output shaft (hypoid gear).

Fig. 663: Identifying Transfer Output Shaft, Transfer Housing, Thrust Washer And Transfer Spacer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the oil seal (A) and tapered roller bearing (B) from the transfer housing (C).

Fig. 664: Identifying Oil Seal, Tapered Roller Bearing And Transfer Housing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSFER HYPOID DRIVE GEAR BEARING REPLACEMENT

Special Tools Required

- Driver 07749-0010000
- Attachment, 42 x 47 mm 07746-0010300
- Attachment, 40 x 50 mm 07LAD-PW50601

1. Remove the tapered roller bearing (A) from the transfer hypoid drive gear (B) using the driver, the attachment (42 x 47 mm), bearing separator (C) and the press.

Fig. 665: Identifying Tapered Roller Bearing Of Transfer Hypoid Drive Gear
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new tapered roller bearing (A) on the transfer hypoid drive gear (B) using the driver, the attachment (42 x 47 mm), the attachment (40 x 50 mm), and the press.

Fig. 666: Identifying Tapered Roller Bearing On Transfer Hypoid Drive Gear
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSFER OUTPUT SHAFT (HYPOID GEAR) BEARING REMOVAL/INSTALLATION

Special Tools Required

Driver, 40 mm I.D. 07746-0030100

1. Remove the tapered roller bearing (A) from the transfer output shaft (hypoid gear) (B) with a bearing

separator (C) and the press. Place a shaft protector (D) between the transfer output shaft (hypoid gear) and the press to prevent damaging the transfer output shaft (hypoid gear).

Fig. 667: Identifying Tapered Roller Bearing Of Transfer Output Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the 40 mm thrust shim (A) over the transfer output shaft (hypoid gear) (B).

Fig. 668: Identifying Thrust Shim And Transfer Output Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tapered roller bearing (C) over the transfer output shaft (hypoid gear) using the driver (40 mm I.D.) and the press.

TRANSFER HOUSING TAPERED ROLLER BEARING OUTER RACE REPLACEMENT

Special Tools Required

- Driver 07749-0010000

- Attachment, 52 x 55 mm 07746-0010400
- Attachment, 65 mm 07JAD-SH30100
- Tapered bearing race installer A 07MAF-SP0011A
- Installer shaft 07MAF-SP0013A

NOTE: **Replace the bearing with a new one whenever the outer race is replaced.**

1. Remove the 52 mm bearing outer race (A), 75 mm outer race (B), and 65 mm outer race (C) from the transfer housing (D).

NOTE: **Some bearing outer races (52 mm, 65 mm, and 75 mm) are press-fitted in the housing and must be removed by heating the housing.**

Fig. 669: Identifying Bearing Outer Race And Transfer Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the press-fitted bearing outer race (A) from the transfer housing (B) by heating the housing to about 212 °F (100 °C) with a heat gun (C). Do not heat the housing more than 212 °F (100 °C).

Fig. 670: Identifying Press-Fitted Bearing Outer Race
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the 52 mm bearing outer race (A) until it bottoms in the transfer housing (B) using the driver and the attachment (52 x 55 mm).

Fig. 671: Identifying Bearing Outer Race
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the 75 mm bearing outer race (A) and 65 mm bearing outer race (B) in the transfer housing (C), set the attachment (65 mm) and the tapered bearing race installer A over the races, and install the installer shaft through the attachment and installer.

Fig. 672: Identifying Bearing Outer Race And Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tighten the installer shaft nut (A) to install the races (B) (C) into the transfer housing (D) securely.

Fig. 673: Identifying Installer Shaft Nut, Races And Transfer Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSFER COVER TAPERED ROLLER BEARING OUTER RACE REMOVAL/INSTALLATION

Special Tools Required

- Driver 07749-0010000
- Attachment, 78 x 80 mm 07NAD-PX40100

NOTE: Replace the bearing with a new one whenever the outer race is replaced.

1. Remove the bearing outer race (A) and 80 mm thrust shim (B) from the transfer cover (C). If the bearing outer race is press-fitted, remove the outer race by heating the cover to about 212 °F (100 °C) with a heat gun (D). Do not heat the housing more than 212°F (100°C).

Fig. 674: Identifying Transfer Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the 80 mm thrust shim (A) and bearing outer race (B) in the transfer cover (C).

Fig. 675: Identifying Thrust Shim, Bearing Outer Race And Transfer Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Drive the outer race securely in the cover using the driver and the attachment (78 x 80 mm) so there is no clearance between the outer race, thrust shim, and cover.

Fig. 676: Identifying Thrust Shim And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRANSFER COVER OIL SEAL REPLACEMENT

Special Tools Required

- Driver 07749-0010000
- Attachment, 65 mm 07JAD-SH30100

1. Remove the oil seal from the transfer cover.

Fig. 677: Identifying Oil Seal Of Transfer Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new oil seal (A) in the transfer cover (B) in height (C) of 0-1 mm (0-0.04 in.) above the cover surface using the driver and attachment (65 mm).

Fig. 678: Identifying Oil Seal In Transfer Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

Special Tools Required

- Driver, 40 mm I.D. 07746-003010G
- Driver 07749-0010000
- Attachment, 65 mm 07JAD-SH30100
- Companion flange holder 07XAB-0010101

2008 Acura MDX

2007-09 TRANSMISSION Automatic Transmission - MDX

- Attachment, 78 x 80 mm 07NAD-PX40100

NOTE:

- While reassembling the transfer assembly:
 - Check and adjust the transfer gear tooth contact.
 - Measure and adjust the transfer gear backlash.
 - Check and adjust the tapered roller bearing starting torque.
- Coat all parts with transfer fluid (hypoid gear oil) during reassembly.
- Replace the tapered roller bearing and the bearing outer race as a set if either part is replaced.
- Replace the transfer hypoid drive gear and the transfer output shaft (hypoid gear) as a set if either part is replaced.

1. Select the 40 mm thrust shim if the transfer output shaft (hypoid gear) is replaced. Calculate the thickness of the 40 mm thrust shim using the formula below, and select the shim from the following table.

FORMULA: $A/100 - B/100 + C = X$

A: Number on the existing transfer output shaft (hypoid gear)

B: Number on the replacement transfer output shaft (hypoid gear)

C: Thickness of the existing 40 mm thrust shim

D: Thickness needed for the replacement 40 mm thrust shim

NOTE: The number on the transfer output shaft (hypoid gear) is shown in 1/100 mm.

EXAMPLE

A: Existing transfer output shaft (hypoid gear) Number = +2

B: Replacement transfer output shaft (hypoid gear) Number = -1

C: Existing 40 mm thrust shim thickness = 1.05 mm

X: Replacement 40 mm thrust shim thickness

$$X = A/100 - B/100 + C$$

$$= 2/100 - (-1)/100 + 1.05$$

$$= 0.02 + 0.01 + 1.05 = 1.08 \text{ (mm)}$$

Select No. M 40 mm thrust shim of 1.08 mm (0.043 in.)

Fig. 679: Identifying Thrust Shim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

THRUST SHIM, 40 mm

THRUST SHIM THICKNESS SPECIFICATION

Shim No.	Part Number	Thickness
A	29361-RDK-000	0.72 mm (0.028 in.)
B	29362-RDK-000	0.75 mm (0.030 in.)
C	29363-RDK-000	0.78 mm (0.031 in.)
D	29364-RDK-000	0.81 mm (0.032 in.)
E	29365-RDK-000	0.84 mm (0.033 in.)
F	29366-RDK-000	0.87 mm (0.034 in.)
G	29367-RDK-000	0.90 mm (0.035 in.)
H	29368-RDK-000	0.93 mm (0.037 in.)
I	29369-RDK-000	0.96 mm (0.038 in.)
J	29370-RDK-000	0.99 mm (0.039 in.)
K	29371-RDK-000	1.02 mm (0.040 in.)
L	29372-RDK-000	1.05 mm (0.041 in.)
M	29373-RDK-000	1.08 mm (0.043 in.)
N	29374-RDK-000	1.11 mm (0.044 in.)
O	29375-RDK-000	1.14 mm (0.045 in.)

2. Select the 40 mm thrust shim if the tapered roller bearing on the transfer output shaft (hypoid gear) is replaced. Measure the thickness of the replacement bearing and the existing bearing, and calculate the difference of the bearing thickness. Adjust the thickness of the existing 40 mm thrust shim by the amount of difference in bearing thickness, and select the replacement 40 mm thrust shim.
3. Install the 40 mm thrust shim (A) on the transfer output shaft (hypoid gear) (B), then install the tapered roller bearing (C) using the driver (40 mm I.D.) and the press.

Fig. 680: Identifying Thrust Shim On Transfer Output Shaft
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Place the tapered roller bearing (A) on the bearing outer race of the companion flange side of the transfer housing, and install the new oil seal (B).

Fig. 681: Identifying Tapered Roller Bearing And Oil Seal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Drive the oil seal securely in the transfer housing using the driver and the attachment (65 mm).

Fig. 682: Identifying Oil Seal In Transfer Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the transfer output shaft (hypoid gear) (A) in the transfer housing (B). Do not install the transfer spacer and thrust washer on the transfer output shaft (hypoid gear).

Fig. 683: Identifying Transfer Output Shaft In Transfer Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the companion flange (A), conical spring washer (B) in the direction shown, and locknut (C) on the transfer output shaft (hypoid gear) (D). Do not install the O-ring and back-up ring.

Fig. 684: Identifying Companion Flange, Conical Spring Washer And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Secure the transfer housing (A) in a bench vise (B) with soft jaws. To prevent damaging the transfer housing, always use soft jaws or equivalent materials between the transfer housing and the vise.

Fig. 685: Identifying Transfer Housing In Bench Vise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the companion flange holder on the companion flange.
10. Tighten the locknut while measuring the starting torque of the transfer output shaft (hypoid gear) so the starting torque is within 1.15-1.71 N.m (11.7-17.4 kgf.cm, 10.2-15.1 lbf.in.). Do not stake the locknut in this step.
11. Remove the companion flange holder.
12. Apply Prussian Blue to both sides of the transfer hypoid drive gear teeth lightly and evenly.
13. Install the tapered roller bearing (A), 25 mm thrust shim (B), and transfer drive gear/shaft assembly (C) in the transfer housing (D).

Fig. 686: Identifying Tapered Roller Bearing, Thrust Shim, Transfer Drive Gear And Shaft Assembly With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the transfer cover (E) and secure the cover with the bolts. Do not install the O-ring on the transfer cover.
15. Rotate the companion flange in both directions until the transfer gears rotate one full turn in both directions.
16. Set a dial indicator (A) on the transfer companion flange (B); position the dial indicator tip (C) on the direct extension of the bolt hole center (D).

Fig. 687: Identifying Dial Indicator On Transfer Companion Flange

Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Measure the transfer gear backlash.

Standard: 0.06-0.16 mm (0.002-0.006 in.)

18. Remove the transfer cover, transfer hypoid drive gear/shaft assembly, and check the transfer hypoid drive gear tooth contact pattern.

CORRECT TOOTH CONTACT PATTERN

INCORRECT TOOTH CONTACT PATTERN

TOE CONTACT

HEEL CONTACT

FLANK CONTACT

FACE CONTACT

Fig. 688: Identifying Correct Tooth Contact Pattern

Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. If the backlash measurement is out of standard, adjust the backlash with the 40 mm thrust shim and recheck. Do not use more than two 40 mm thrust shims to adjust the backlash.
20. If the transfer gear tooth contact is incorrect, adjust the tooth contact with the 25 mm, 40 mm, or 80 mm thrust shim. Do not use more than two of each thrust shim to adjust the tooth contact.

- Toe Contact

Use a thicker 40 mm thrust shim to move the transfer output shaft (hypoid gear) away from the transfer hypoid drive gear. Because this movement causes the transfer gear backlash to change, move the transfer hypoid drive gear toward the transfer output shaft (hypoid gear) to adjust the transfer gear backlash as follows:

- Reduce the thickness of the 25 mm thrust shim.
- Increase the thickness of the 80 mm thrust shim by the amount you reduced the thickness of the 25 mm thrust shim.

- Heel Contact

2008 Acura MDX

2007-09 TRANSMISSION Automatic Transmission - MDX

Use a thicker 40 mm thrust shim to move the transfer output shaft (hypoid gear) toward the transfer hypoid drive gear. Because this movement causes the transfer gear backlash to change, move the transfer hypoid drive gear away from the transfer output shaft (hypoid gear) to adjust the transfer gear backlash as follows:

- Increase the thickness of the 25 mm thrust shim.
- Reduce the thickness of the 80 mm thrust shim by the amount you increased the thickness of the 25 mm thrust shim.
- Flank Contact

Use a thicker 25 mm thrust shim to move the transfer hypoid drive gear away from the transfer output shaft (hypoid gear). Flank contact must be adjusted within the limits of the transfer gear backlash. If the backlash exceeds the limits, adjust as described under Heel Contact.

- Face Contact

Use a thinner 25 mm thrust shim to move the transfer hypoid drive gear toward the transfer output shaft (hypoid gear). Face contact must be adjusted within the limits of the transfer gear backlash. If the backlash exceeds the limits, adjust as described under Toe Contact.

THRUST SHIM, 25 mm

THRUST SHIM THICKNESS SPECIFICATION

Shim No.	Part Number	Thickness
1.70	29411-P1 C-000	1.70 mm (0.067 in.)
1.73	29412-P1 C-000	1.73 mm (0.068 in.)
1.76	29413-P1 C-000	1.76 mm (0.069 in.)
1.79	29414-P1 C-000	1.79 mm (0.070 in.)
1.82	29415-P1 C-000	1.82 mm (0.072 in.)
1.85	29416-P1 C-000	1.85 mm (0.073 in.)
1.88	29417-P1 C-000	1.88 mm (0.074 in.)
1.91	29418-P1 C-000	1.91 mm (0.075 in.)
1.94	29419-P1 C-000	1.94 mm (0.076 in.)
1.97	29420-P1 C-000	1.97 mm (0.078 in.)
2.00	29421-P1 C-000	2.00 mm (0.079 in.)
2.03	29422-P1 C-000	2.03 mm (0.080 in.)
2.06	29423-P1 C-000	2.06 mm (0.081 in.)
2.09	29424-P1 C-000	2.09 mm (0.082 in.)
2.12	29425-P1 C-000	2.12 mm (0.083 in.)
2.15	29426-P1 C-000	2.15 mm (0.085 in.)
2.18	29427-P1 C-000	2.18 mm (0.086 in.)
2.21	29428-P1 C-000	2.21 mm (0.087 in.)
2.24	29429-P1 C-000	2.24 mm (0.088 in.)

21. Remove the transfer cover (A), transfer hypoid drive gear/shaft assembly (B), 25 mm thrust shim (C), and tapered roller bearing (D) from the transfer housing (E) after adjusting the transfer gear backlash or transfer gear tooth contact.

Fig. 689: Identifying Incorrect Tooth Contact Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Secure the transfer housing (A) in a bench vise (B) with soft jaws. To prevent damage to the transfer housing, always use soft jaws or equivalent materials between the transfer housing and the vise.

Fig. 690: Identifying Transfer Housing With Soft Jaws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Install the companion flange holder on the companion flange, then loose the locknut.
24. Remove the companion flange holder.
25. Remove the locknut (A), conical spring washer (B), and companion flange (C) from the transfer output shaft (hypoid gear) (D).

Fig. 691: Identifying Locknut, Conical Spring Washer And Companion Flange
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Remove the transfer output shaft (hypoid gear) from the transfer housing.
27. Install the thrust washer (A) and the new transfer spacer (B) on the transfer output shaft (hypoid gear) (C) in the direction shown, and install them in the transfer housing (D).

Fig. 692: Identifying Thrust Washer, Transfer Spacer, Transfer Output Shaft And Transfer Housing
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Coat the threads of the locknut and transfer output shaft (hypoid gear) with transfer fluid (hypoid gear oil).

29. Install the companion flange (A), new O-ring (B), back-up ring (C), new conical spring washer (D), and new locknut (E) on the transfer output shaft (hypoid gear) (F). Install the conical spring washer in the direction shown.

Fig. 693: Identifying Companion Flange, O-Ring, Back-Up Ring And Conical Spring Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Secure the transfer housing (A) in a bench vise (B) with soft jaws. To prevent damaging the transfer housing, always use soft jaws or equivalent materials between the transfer housing and the vise.

Fig. 694: Identifying Transfer Housing In Bench Vise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Install the companion flange holder on the companion flange.
32. Tighten the locknut while measuring the starting torque of the transfer output shaft (hypoid gear) so the starting torque is within 1.15-1.71 N.m (11.7-17.4 kgf.cm, 10.2-15.1 lbf.in.).

Tightening Torque:

108-294 N.m

(11.0-30.0 kgf.m, 79.6-217 lbf.ft)

Starting Torque:

1.15-1.71 N.m

(11.7-17.4 kgf.cm, 10.2-15.1 lbf.in.)

NOTE:

- Rotate the companion flange several turns to seat the tapered roller bearings, then measure the starting torque.
- If the starting torque exceeds 1.71 N.m (17.4 kgf.cm, 15.1 lbf.in), replace the transfer spacer and reassemble the parts. Do not adjust the torque with the locknut loose.
- If the tightening torque exceeds 294 N.m (30.0 kgf.m, 217 lbf.ft), replace the transfer spacer and reassemble the parts.

33. Remove the companion flange holder.

34. Stake the locknut into the transfer output shaft (hypoid gear) in depth (A) of 0.7-1.2 mm (0.03-0.05 in.) using a 3.5 mm punch (B).

Fig. 695: Identifying Locknut Into Transfer Output Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Install the tapered roller bearing (A), 25 mm thrust shim (B), and transfer hypoid drive gear/shaft assembly (C) in the transfer housing (D).

Fig. 696: Identifying Tapered Roller Bearing, Thrust Shim And Transfer Hypoid Drive Gear With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Temporarily install the transfer cover (E) without the O-ring, and secure the cover with the bolts.
37. Secure the transfer housing (A) in a bench vise (B) with soft jaws. To prevent damaging the transfer housing, always use soft jaws or equivalent materials between the transfer housing and the vise.

Fig. 697: Identifying Transfer Housing In Bench Vise

Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Rotate the companion flange several turns to seat the tapered roller bearings.
39. Measure the starting torque at the companion flange (C) with a torque wrench (D) and a socket (E).

Standard: 2.74-4.64 N.m

(27.9-47.3 kgf.cm, 24.2-41.1 lbf.in.)

40. Remove the transfer cover from the transfer housing.
41. If the measurement is within the standard, go to step 47.
42. If the measurement is out of standard, remove the bearing outer race (A) and 80 mm thrust shim (B) from the transfer cover (C). If the bearing outer race is press-fitted, remove the outer race by heating the cover to about 212 °F (100 °C) with a heat gun (D). Do not heat the housing more than 212 °F (100 °C).

Fig. 698: Identifying Transfer Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. Measure the thickness of the 80 mm thrust shim, and select the new 80 mm thrust shim.

THRUST SHIM, 80 mm

THRUST SHIM THICKNESS SPECIFICATION

Shim No.	Part Number	Thickness
A	41401-RDK-000	1.52 mm (0.060 in.)
B	41402-RDK-000	1.55 mm (0.061 in.)

AM	41439-RDK-000	2.66 mm (0.105 in.)

44. Install the 80 mm thrust shim (A) and bearing outer race (B) in the transfer cover (C). If you heated the cover, let it cool to room temperature before installing the thrust shim.

Fig. 699: Identifying Thrust Shim, Bearing Outer Race And Transfer Cover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

45. Drive the outer race securely in the cover using the driver and the attachment (78 x 80 mm) so there is no clearance between the outer race, thrust shim, and cover.

Fig. 700: Identifying Thrust Shim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

46. After replacing the 80 mm thrust shim, recheck and make sure that the total starting torque is within the specification.
47. Install the new O-ring (A) on the transfer cover (B), then install the transfer cover on the transfer housing (C).

Fig. 701: Identifying O-Ring, Transfer Cover And Transfer Housing With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

48. Remove the filler plug (A), then refill the transfer assembly with transfer fluid (hypoid gear oil). Use an SAE 90 or SAE 80W-90 viscosity hypoid gear oil, API classified GL4 or GL5 only.

Viscosity:

SAE 90: Above 0 °F (-18°C)

SAE 80W-90: Below 0 °F (-18 °C)

Hypoid Gear Oil Capacity: 0.45 L (0.48 US qt)

COMPONENT LOCATION INDEX

Fig. 2: Identifying Driveline/Axle Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVESHAFT INSPECTION

1. Check the inboard boot (A) and the outboard boot (B) on the driveshaft (C) for cracks, damage, leaking grease, and loose boot bands (D). If any damage is found, replace the boot and boot bands.

Fig. 3: Identifying Inboard Boot And Outboard Boot On Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the driveshaft for cracks and damage. If any damage is found, replace the driveshaft.
3. Check the inboard joint (E) and the outboard joint (F) for cracks and damage. If any damage is found, replace the inboard joint or the outboard joint as an assembly.
4. Hold the inboard joint and turn the front wheel by hand, then make sure the joint is not excessively loose. If necessary, replace the inboard joint or the outboard joint as an assembly.

FRONT DRIVESHAFT REMOVAL

1. Raise the vehicle on a lift. remove the front wheels.
2. Remove the front wheels.
3. Pry up the locking tab (A) on the spindle nut (B), then remove the nut.

Fig. 4: Identifying Locking Tab On Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the splash shield.(see step 30 on **ENGINE REMOVAL**).
5. Drain the transmission fluid, then reinstall the drain plug with a new sealing washer. (see **ATF REPLACEMENT**).
6. Remove the suspension stroke sensor (with active damper system). (see **DASHBOARD WIRE HARNESS (CENTER CONSOLE BRANCH)**)
7. Remove the lock pin (A) from the lower arm ball joint castle nut (B), and remove the nut.

Fig. 5: Identifying Lock Pin From Lower Arm Ball Joint Castle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Separate the ball joint from the knuckle (C).

NOTE:

- To avoid damaging the ball joint, install the ball joint thread protector onto the threads of the ball joint.
- Be careful not to damage the ball joint boot when installing the remover (see BALL JOINT REMOVAL).

9. Loosen the driveshaft outboard joint from the front hub using a plastic hammer.

Fig. 6: Tapping Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Pull the knuckle outward, and separate the outboard joint from the front hub.

Fig. 7: Identifying Driveshaft Outboard Joint From Front Wheel Hub
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Left driveshaft: Pry the inboard joint (A) from the differential with a prybar. Remove the driveshaft as an assembly.

NOTE:

- Do not pull by the driveshaft (B) or the inboard joint may come apart. Pull the driveshaft straight out to avoid damaging the oil seal.
- Be careful not to damage the ball joint boot when installing the remover .

Fig. 8: Prying Inboard Joint From Transmission Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Right driveshaft: Drive the inboard joint (A) off of the intermediate shaft using a drift and a hammer. Remove the driveshaft as an assembly.

NOTE:

Do not pull on the driveshaft (B) or the inboard joint may come apart.

Fig. 9: Tapping Inboard Joint With Drift
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the set ring (A) from the left driveshaft inboard joint.

Fig. 10: Identifying Set Ring And Left Driveshaft Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the set ring (A) from the intermediate shaft.

Fig. 11: Identifying Set Ring And Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DRIVESHAFT DISASSEMBLY

Special Tools Required

- Threaded adapter, 26 x 1.5 mm 07XAC-001030A
- Slide hammer, 5/8"-18 UNF, commercially available.
- Puller, commercially available
- Boot band pliers, commercially available

Inboard Joint Side

1. Remove the boot bands. Be careful not to damage the boot.
 - If the boot band is a double loop type (A), lift up the band end (B), then push it into the clip (C).
 - If the boot band is a low profile type (D), pinch the boot band using commercially available boot band pliers (E).

Double loop type

Double loop type

Fig. 12: Identifying Boot Band Clip (Double Loop Type)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Low profile type

Low profile type

Fig. 13: Identifying Boot Band Using Boot Band Pliers (Low Profile Type)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Make marks (A) on each roller (B) and inboard joint (C) to identify the locations of rollers and grooves in the inboard joint. Then remove and place the inboard joint on a shop towel (D). Be careful not to drop the rollers when separating them from the inboard joint.

NOTE: Do not engrave or scribe any marks on the rolling surface.

Fig. 14: Identifying Mark Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Make marks (A) on the rollers (B) and spider (C) to identify the locations of the rollers on the spider, then remove the rollers.

NOTE: Do not engrave or scribe any marks on the rolling surface.

Fig. 15: Identifying Rollers And Spider With Circlip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the circlip(D).
5. Mark the spider and driveshaft (E) to identify the position of the spider on the shaft.
6. Remove the spider.

NOTE: If necessary, use a commercially available puller.

7. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the boot.

Fig. 16: Identifying Splines On Driveshaft With Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the inboard boot. Be careful not to damage the boot.
9. Remove the vinyl tape.

Outboard Joint Side

1. Remove the boot bands (A). Be careful not to damage the boot. Lift up the three tabs (B) with a screwdriver.

Fig. 17: Identifying Lifting Up Three Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the outboard boot (A) partially to the inboard joint side. Be careful not to damage the boot.

Fig. 18: Identifying Outboard Boot

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Wipe off the grease to expose the driveshaft and the outboard joint inner race.
4. Make a mark (A) on the driveshaft (B) at the same level as the outboard joint rim (C).

**Fig. 19: Identifying Grease To Expose Driveshaft And Outboard Joint Inner Race**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Securely clamp the driveshaft in a bench vise with a shop towel.
6. Remove the outboard joint (A) using the 26 x 1.5 mm threaded adapter (B) and a commercially available 5/8"-18 UNF slide hammer (C).

**Fig. 20: Identifying Outboard Joint**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the driveshaft from the vise.
8. Remove the stop ring (A) from the driveshaft.

Fig. 21: Identifying Stop Ring From Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the boot.

Fig. 22: Identifying Splines On Driveshaft With Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the outboard boot. Be careful not to damage the boot.
11. Remove the vinyl tape.

FRONT DRIVESHAFT REASSEMBLY

Exploded View

Fig. 23: Exploded View Of Front Driveshaft Reassembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Boot band tool, KD-3191 or equivalent, commercially available
- Boot band pliers, Kent-Moore J-35910 or equivalent, commercially available
- Boot band pliers, commercially available

NOTE: Refer to the EXPLODED VIEW, as needed, during this procedure.

Inboard Joint Side

1. Wrap the splines with vinyl tape (A) to prevent damaging the inboard boot.

Fig. 24: Identifying Splines With Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the inboard boot onto the driveshaft, then remove the vinyl tape. Be careful not to damage the inboard boot.
3. Install the spider (A) onto the driveshaft by aligning the marks (B) you made on the spider and the end of the driveshaft.

Fig. 25: Identifying Spider Onto Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the circlip (C) into the driveshaft groove. Rotate the circlip in its groove to make sure it is fully seated.
5. Fit the rollers (A) onto the spider (B) with their high shoulders facing outward, and note these items:
 - Reinstall the rollers in their original positions on the spider by aligning the marks (C) you made.

- Hold the driveshaft pointed up to prevent the rollers from falling off.

Fig. 26: Identifying Driveshaft Position

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pack the inboard joint with the joint grease included in the new inboard boot set.

Grease quantity

Inboard joint: 190–210 g (6.7–7.4 oz)

Fig. 27: Identifying Grease Applying Area

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Fit the inboard joint onto the driveshaft, and note these items:
 - Reinstall the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the rollers.
 - Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.

Fig. 28: Identifying Marks On Inboard Joint And Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Fit the boot ends (A) onto the driveshaft (B) and the inboard joint (C).

Fig. 29: Identifying Boot Ends Onto Driveshaft And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Adjust the inboard joint so the rollers are in the middle of the joint, bleed the excess air from the boot, then adjust the driveshaft length to the figure as shown. Doing this prevents a vacuum or too much air in the boot, preventing it from compressing or extending properly.

Right driveshaft: 569.5—574.5 mm (22.42—22.62 in.)

Left driveshaft: 571.2—576.2 mm (22.49—22.68 in.)

Fig. 30: Identifying Driveshaft Length

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install new boot bands.
 - For the double loop type, go to step 11.
 - For the low profile type, go to step 20.
11. Fit the boot ends onto the driveshaft and the inboard joint, then install the new double loop band (A) onto the boot (B).

NOTE: Pass the end of the new double loop band through the clip (C) twice in the direction of the forward rotation of the driveshaft.

Fig. 31: Identifying End Of Double Loop Band Through Clip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pull up the slack in the band by hand.
13. Mark a position (A) on the band 10-14 mm (0.4-0.6 in.) from the clip (B).

Fig. 32: Identifying Boot Band Position

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Thread the free end of the band through the nose section of the commercially available boot band tool KD-3191 or equivalent (A), and into the slot on the winding mandrel (B).

Fig. 33: Identifying Boot Band

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Using a wrench on the winding mandrel of the boot band tool, tighten the band until the marked spot (C) on the band meets the edge of the clip.
16. Lift up the boot band tool to bend the free end of the band 90 degrees to the clip. Center-punch the clip, then fold over the remaining tail onto the clip.

Fig. 34: Identifying Boot Band

Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Unwind the boot band tool, and cut off the excess free end of the band to leave a 5-10 mm (0.2-0.4 in.) tail protruding from the clip.

Fig. 35: Identifying Cutting Off Excess Free End Of Band

Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Bend the band end (A) by tapping it down with a hammer.

NOTE:

- Make sure the band and clip do not interfere with anything on the vehicle and the band does not move.
- Clean any grease remaining on the surrounding surfaces.

Fig. 36: Identifying Boot Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Repeat steps 11 through 18 for the band on the other end of the boot.
20. Install the new low profile band (A) onto the boot (B), then hook the tab (C) of the band.

Fig. 37: Identifying Boot Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Close the hook portion of the band with a commercially available boot band pliers (A), then hook the tabs (B) of the band.

Fig. 38: Identifying Hook Portion Of Band

Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the boot band on the other end of the boot, and repeat steps 20 and 21.

Outboard Joint Side

1. Wrap the splines with vinyl tape (A) to prevent damaging the outboard boot.

Fig. 39: Identifying Splines With Vinyl Tape

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new ear clamp bands (B) and the outboard boot, then remove the vinyl tape. Be careful not to damage the outboard boot.
3. Install the new stop ring into the driveshaft groove (A).

Fig. 40: Identifying Stop Ring Into Driveshaft Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pack about 35 g (1.2 oz) grease included in the new joint boot set into the driveshaft hole in the outboard joint.

NOTE: If you are installing a new outboard joint, the grease is already installed.

Fig. 41: Identifying Grease In Driveshaft Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint.

Fig. 42: Identifying Driveshaft Into Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. To completely seat the outboard joint, pick up the driveshaft and joint, and tap or hit them from a height of about 10 cm (4 in.) onto a hard surface. Do not use a hammer as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.

Fig. 43: Identifying Outboard Joint Into Hard Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Check the alignment of the paint mark (A) with the outboard joint rim (B).

Fig. 44: Identifying Alignment Of Paint Mark With Outboard Joint Rim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pack the outboard joint (A) with the remaining joint grease included in the new joint boot set.

Total grease quantity
 outboard joint: 115—135 g (4.0—4.7 oz)

Fig. 45: Identifying Grease To Outboard Joint
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Fit the boot (A) ends onto the driveshaft (B) and the outboard joint (C).

Fig. 46: Identifying Boot Onto Driveshaft And Outboard Joint
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Adjust the length of the driveshafts to the figure below, then adjust the boots to halfway between full compression and full extension. Make sure the ends of the boots seat in the groove of the driveshaft and joint. Doing this prevents a vacuum or too much air in the boot, preventing it from compressing or extending properly.

Right driveshaft: 569.5—574.5 mm (22.42—22.62 in.)

Left driveshaft: 571.2—576.2 mm (22.49—22.68 in.)

Fig. 47: Identifying Driveshafts Length
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Close the ear portion (A) of the band with commercially available boot band pliers Kent-Moore J-35910 or equivalent (B).

Fig. 48: Identifying Portion Of Band

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.

Fig. 49: Identifying Clearance Between Closed Portion Of Band

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Repeat steps 11 and 12 for the band on the other end of the boot.

FRONT DRIVESHAFT INSTALLATION

NOTE: Before starting installation, make sure the mating surfaces of the joint and the splined section are not dusty or dirty.

1. Apply about 5 g (0.18 oz) of moly 60 paste (P/N 08734-0001) to the contact area (A) of the outboard joint and the front wheel bearing.

NOTE: The paste helps to prevent noise and vibration.

Fig. 50: Identifying Grease In Outboard Joint And Front Wheel Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install a new set ring (A) in the set ring groove (B) of the driveshaft (left driveshaft).

Fig. 51: Identifying Set Ring In Set Ring Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install a new set ring (A) onto the set ring groove (B) of the intermediate shaft.

Fig. 52: Identifying Set Ring & Set Ring Groove

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply 2.0-3.0 g (0.07-0.10 oz) of super high temp urea grease (P/N 08798-9002) to the entire splined surface (A) of the right driveshaft. After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft.

Fig. 53: Identifying Grease To Splined Surface

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Clean the areas where the driveshaft contacts the differential thoroughly with solvent or brake cleaner, and dry with compressed air.

NOTE: Do not wash the rubber parts with solvent or brake cleaner.

6. Insert the inboard end (A) of the driveshaft into the differential (B) or intermediate shaft (C) until the set ring (D) locks in the groove (E).

Fig. 54: Identifying Inboard Of Driveshaft Into Differential
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the knuckle (A) onto the lower arm (B). Be careful not to damage the ball joint boot (C). Wipe off the grease before tightening the nut at the ball joint. Torque the new castle nut (D) to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the nut by loosening it.

NOTE: Make sure the ball joint boot is not damaged or cracked.

Fig. 55: Identifying Outboard Joint Into Front Wheel Hub
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Wipe off any grease contamination from the ball joint tapered section and threads, then install the knuckle (A) onto the lower arm (B). Be careful not to damage the ball joint boot (C). Wipe off the grease before

tightening the nut at the ball joint. Torque the new castle nut (D) to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole.

NOTE:

- Make sure the ball joint boot is not damaged or cracked.
- Do not align the nut by loosening it.

Fig. 56: Identifying Knuckle Onto Lower Arm With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the lock pin (E) into the pin hole as shown.
10. Install the suspension stroke sensor (with active damper system). **SUSPENSION STROKE SENSOR REPLACEMENT**
11. Install the splash shield.(see step 39 on **ENGINE INSTALLATION**
12. Apply a small amount of engine oil to the seating surface of the new spindle nut (A).

Fig. 57: Identifying Mount Of Engine Oil To Seating Surface Of Spindle Nut With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.
14. Clean the mating surfaces of the brake disc and the front wheel, then install the front wheels.
15. Turn the front wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
16. Lower the vehicle on the lift.
17. Refill the transmission with recommended fluid. (see ATF REPLACEMENT).
18. Test-drive the vehicle.(see WHEEL ALIGNMENT).

INTERMEDIATE SHAFT REMOVAL

1. Drain the transmission fluid. Reinstall the drain plug using a new washer (see ATF REPLACEMENT).
2. Remove the right driveshaft (see FRONT DRIVESHAFT REMOVAL).
3. Remove exhaust pipe A (see step 7 in TRANSFER ASSEMBLY REMOVAL).
4. Remove the exhaust pipe bracket (A).

Fig. 58: Identifying Exhaust Pipe Bracket And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the flange bolt (A), and two dowel bolts (B).

Fig. 59: Identifying Flange Bolt And Dowel Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the intermediate shaft (C) from the differential. Hold the intermediate shaft horizontally until it is clear of the differential to prevent damaging to the differential oil seal.

INTERMEDIATE SHAFT DISASSEMBLY

Special Tools Required

- Driver 07749-0010000
- Support base attachment 07LAF-SM40300
- Support base 07965-SD90100
- Attachment, 42 x 47 mm 07746-0010300

1. Remove the heat shield.

Fig. 60: Identifying Heat Shield And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the intermediate shaft outer seal (A) from the bearing support (B).

**Fig. 61: Identifying Set Ring And External Snap Ring**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the set ring (C) and external snap ring (D).
4. Press the intermediate shaft (A) out of the intermediate shaft bearing (B) using the support base attachment (C), support base (D) and a press. Be careful not to damage the bearing support ring (E) on the intermediate shaft during disassembly.

**Fig. 62: Identifying Intermediate Shaft Out Of Intermediate Shaft Bearing**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the internal snap ring.

Fig. 63: Identifying Internal Snap Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Press the intermediate shaft bearing (A) out of the bearing support (B) using the support base attachment (C), support base (D), driver (E), attachment (F) and a press.

Fig. 64: Identifying Intermediate Shaft Bearing Out Of Bearing Support

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT REASSEMBLY

Exploded View

Fig. 65: Exploded View Of Intermediate Shaft With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Driver 07749-0010000
- Support base attachment 07LAF-SM40300
- Support base 07965-SD90100
- Oil seal driver attachment 07JAD-PH80101
- Fork seal driver, 39.2 x 49.5 x 15 mm 07947-4630100

NOTE: Refer to the EXPLODED VIEW, as needed, during this procedure.

1. Clean the disassembled parts with solvent, and dry them with compressed air. Do not wash the rubber parts with solvent.
2. Press the intermediate shaft bearing (A) into the bearing support (B) using the driver (C), oil seal driver attachment (D) and a press.

Fig. 66: Identifying Intermediate Shaft Bearing Into Bearing Support
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install, then seat the internal snap ring in the groove of the bearing support.

Fig. 67: Identifying Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Press the intermediate shaft (A) into the shaft bearing (B) using the fork seal driver (C) and a press.

Fig. 68: Identifying Intermediate Shaft Into Shaft Bearing
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install, then seat the external snap ring (A) in the groove of the intermediate shaft (B).

Fig. 69: Identifying External Snap Ring In Groove Of Intermediate Shaft
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the outer seal (A) into the bearing support (B) using the fork seal driver (C), support base attachment (D), support base (E) and a press.

Fig. 70: Identifying Outer Seal Into Bearing Support
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the heat shield onto the bearing support.

Fig. 71: Identifying Heat Shield Onto Bearing Support With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT INSTALLATION

1. Clean the areas where the intermediate shaft contacts the differential thoroughly with solvent or brake cleaner, and dry with compressed air.

NOTE: Do not wash the rubber parts with solvent or brake cleaner.

Fig. 72: Identifying Intermediate Shaft Installation Positions With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install a new set ring (A) onto the set ring groove of the intermediate shaft (B).
3. Insert the intermediate shaft into the differential correctly.
4. Install the flange bolt (C), two dowel bolts (D), and exhaust pipe bracket (E).
5. Install exhaust pipe A. (see step 5 on **TRANSFER ASSEMBLY INSTALLATION**).
6. Install the right driveshaft. (see **FRONT DRIVESHAFT INSTALLATION**).
7. Refill the transmission with recommended fluid. (see **ATF REPLACEMENT**).
8. Check the wheel alignment, and adjust it if necessary. (see **WHEEL ALIGNMENT**).
9. Test-drive the vehicle.

REAR DRIVESHAFT REMOVAL

Special Tools Required

- Driveshaft remover 07AAD-S3VA000
- Ball joint remover, 28 mm 07MAC-SL0A202

1. Raise the vehicle on a lift.
2. Remove the rear wheels.
3. Pry up the locking tab (A) on the spindle nut (B), then remove the nut.

Fig. 73: Identifying Locking Tab On Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the rear wheel sensor (A) and harness clip (B).

Fig. 74: Identifying VSA Rear Wheel Sensor And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the lock pin (A) from the upper arm ball joint castle nut (B), and remove the nut.

Fig. 75: Identifying Ball Joint From Upper Arm With Ball Joint Remover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Separate the ball joint from the upper arm (C) with the ball joint remover (D) (see **BALL JOINT REMOVAL**).
7. Remove the special self-locking nut (B), washer and flange bolt (C), then remove the lower arm A.

Fig. 76: Identifying Special Self-Locking Nut And Washer With Flange Bolt
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Place a transmission jack under lower arm B and remove the flange bolt (A).

Fig. 77: Identifying Transmission Jack Under Lower Arm And Flange Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Loosen the rear driveshaft outboard joint from the rear hub using a plastic hammer.

Fig. 78: Tapping Rear Driveshaft Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Pull the knuckle (A) outward, then remove the rear driveshaft outboard joint (B).

NOTE: When removing the outboard joint, continue supporting both the knuckle and lower arm with the transmission jack. Make sure not to over extend the brake hose.

Fig. 79: Identifying Rear Driveshaft Outboard Joint And Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Using the driveshaft remover (A) and the hammer, pry out the inboard joint (B) from the rear differential (C).

Fig. 80: Identifying Prying Out Inboard Joint From Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the rear driveshaft(A), then remove the set ring (B).

Fig. 81: Identifying Rear Driveshaft And Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DRIVESHAFT DISASSEMBLY

Special Tools Required

Threaded adapter, 24 x 1.5 mm 07XAC-001020A

Inboard Joint Side

1. Remove the boot bands. Be careful not to damage the boot (see step 1).
2. Make a mark (A) on each roller (B) and inboard joint (C) to identify the locations of the rollers and the grooves in the inboard joint. Then remove the inboard joint and place it on a shop towel (D). Be careful not to drop the rollers when separating them from the inboard joint.

Fig. 82: Identifying Mark Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the circlip (A).

Fig. 83: Identifying Spider And Rollers

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Make a mark on the spider (B) and driveshaft (C) to identify the position of the spider on the shaft.
5. Remove the spider and rollers using a commercially available bearing remover (D).
6. Wrap the splines on the driveshaft (A) with vinyl tape (B) to prevent damaging the boot.

Fig. 84: Identifying Splines On Driveshaft With Vinyl Tape

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the inboard boot (C). Be careful not to damage the boot (see **INBOARD JOINT SIDE**).
8. Remove the vinyl tape.

Outboard Joint Side

1. Remove the boot bands. Be careful not to damage the boot (see step 1)).
2. Slide the outboard boot (A) partially to the inboard joint side. Be careful not to damage the boot.

Fig. 85: Identifying Outboard Boot

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Wipe off the grease to expose the driveshaft and the outboard joint inner race.
4. Make a mark (A) on the driveshaft (B) at the same level as the outboard joint end (C).

Fig. 86: Identifying Grease To Expose Driveshaft And Outboard Joint Inner Race

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Securely clamp the driveshaft in a bench vise with a shop towel.
6. Remove the outboard joint (A) using the 24x1.5mm threaded adapter (B) and a commercially available 5/8"-18 UNF slide hammer (C).

Fig. 87: Identifying Outboard Joint

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the driveshaft from the bench vise.
8. Remove the stop ring (A) from the driveshaft (B).

Fig. 88: Identifying Stop Ring From Driveshaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Wrap the splines on the driveshaft with vinyl tape to prevent damaging to the boot.
10. Remove the outboard boot. Be careful not to damage the boot.
11. Remove the vinyl tape.

REAR DRIVESHAFT REASSEMBLY

Exploded View

2008 Acura MDX

2007-09 DRIVELINE/AXLES Driveline/Axle - MDX

Fig. 89: Exploded View Of Rear Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

Inner handle, 30 mm 07946-MB00000

NOTE: Refer to the EXPLODED VIEW as needed during this procedure.

Inboard Joint Side

1. Wrap the splines with vinyl tape (A) to prevent damaging the inboard boot (B).

Fig. 90: Identifying Splines With Vinyl Tape

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the spider and rollers (A) onto the driveshaft by aligning the marks (B) you made, install it using the inner handle (C).

Fig. 91: Tapping Spider On Driveshaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the circlip (D) into the driveshaft groove. Rotate the circlip in its groove to make sure it is fully seated.
4. Pack the inboard joint with the joint grease included in the new inboard boot set.

Fig. 92: Identifying Grease In Inboard Joint

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Fit the inboard joint onto the driveshaft, and note these items:
 - Reinstall the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the rollers.
 - Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.

Fig. 93: Identifying Inboard Joint Onto Driveshaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Fit the boot ends (A) onto the driveshaft (B) and outboard joint (C).

Fig. 94: Identifying Boot Onto Driveshaft And Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Adjust the length of the driveshafts to the figure as shown, then adjust the boots to halfway between full compression and full extension. Make sure the ends of the boots seat in the groove of the driveshaft and joint. Doing this prevents a vacuum or too much air in the boot, preventing it from compressing or extending properly.

Left driveshaft: 592.5—593.5 mm
(23.33—23.37 in.)
Right driveshaft: 621.5—622.5 mm
(24.47—24.51 in.)

Fig. 95: Identifying Driveshafts Length
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install new boot bands:
 - For the double loop type (see step 11 on)
 - For the low profile type (see step 20 on)

Outboard Joint Side

1. Wrap the splines with vinyl tape (A) to prevent damaging the outboard boot (B).

Fig. 96: Identifying Splines With Vinyl Tape

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the outboard boot, then remove the vinyl tape. Be careful not to damage the outboard boot.
3. Install a new stop ring (A) in the driveshaft groove (B).

Fig. 97: Identifying Stop Ring In Driveshaft Groove

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pack about 35 g (1.2 oz) grease included in the new outboard boot set into the driveshaft hole in the outboard joint.

NOTE: If you are installing a new outboard joint, the grease is already installed.

Fig. 98: Identifying Grease In Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint.

Fig. 99: Identifying Driveshaft Into Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. To completely seat the outboard joint, pick up the driveshaft and joint, and tap them on a hard surface.

NOTE: Do not use a hammer as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.

Fig. 100: Seating Outboard Joint

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Check the alignment of the paint mark (A) you made with the outboard joint end (B).

Fig. 101: Identifying Alignment Of Paint Mark

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pack the outboard joint (A) with the remaining joint grease included in the new outboard boot set.

NOTE: Total grease quantity ; Outboard joint: 85-105 g (3.0-3.7 oz)

Fig. 102: Identifying Grease In Outboard Joint

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Fit the boot ends (A) onto the driveshaft (B) and the outboard joint (C). Bleed any excess air from the boots by inserting a flat-tipped screwdriver between the boot and the joint.

Fig. 103: Identifying Boot Onto Driveshaft And Outboard Joint

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Inspect the length (A) of the driveshaft to the figure as shown, then adjust the boots to halfway between full compression and full extension.

Left driveshaft: 592.5—593.5 mm
(23.33—23.37 in.)
Right driveshaft: 621.5—622.5 mm
(24.47—24.51 in.)

Fig. 104: Identifying Driveshafts Length

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the new low profile bands (see step 20).
12. Install the boot band on the other end of the boot, and repeat step 11.

REAR DRIVESHAFT INSTALLATION

NOTE: Before starting installation, make sure the mating surfaces of the joint and the splined section are free from dirt or dust.

1. Apply 1.5-2.0 g (0.05-0.07 oz) of grease to the whole splined surface (A). After applying grease, remove the grease from the splined grooves at intervals of 2-3 splines and from the set ring groove (B) so that air can bleed from the differential.

Fig. 105: Identifying Grease To Splined Surface

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install a new set ring in the set ring groove (A) of the differential.

Fig. 106: Identifying Set Ring Groove

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Clean the areas where the driveshaft contacts the differential thoroughly with solvent or brake cleaner, and dry with compressed air. Insert the inboard end (A) of the driveshaft into the differential (B) until the set ring (C) locks in the groove (D).

Fig. 107: Identifying Inboard Of Driveshaft Into Differential

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull the knuckle (A) outward, and install the rear driveshaft outboard joint (B) into the rear hub.

NOTE: When installing the outboard joint continue supporting both the knuckle and lower arm with the transmission jack. Make sure not to over extend the brake hose.

Fig. 108: Identifying Rear Driveshaft Outboard Joint And Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Loosely install the flange bolt (A) onto lower arm B.

Fig. 109: Identifying Flange Bolt Onto Lower Arm With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the lower arm A, then loosely install a new flange bolt (B) and a new self-locking nut (C) with a washer (D).

Fig. 110: Identifying Lower Arm And Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the upper arm (A). Be careful not to damage the ball joint boot (B). Wipe off the grease before tightening the nut at the ball joint.

Fig. 111: Identifying Upper Arm And Ball Joint Boot With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Torque the new castle nut (C) to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the nut by loosening it.

NOTE: Make sure the ball joint boot is not damaged or cracked.

9. Install the rear wheel sensor (A) and harness clip (B).

Fig. 112: Identifying VSA Rear Wheel Sensor And Harness Clip With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place a floor jack under the lower arm, and raise the suspension to load it with the vehicle's weight.

Fig. 113: Identifying Spindle Nut With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Tighten the lower arm B flange bolt, the lower arm A self-locking nut and the lower arm A flange bolt to the specified torque values.
12. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).
13. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.
14. Clean the mating surfaces of the brake disc and the rear wheel, then install the rear wheels.
15. Turn the rear wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
16. Lower the vehicle on the lift.
17. Check the rear wheel alignment, and adjust it if necessary.(see **WHEEL ALIGNMENT**).

18. Test-drive the vehicle

PROPELLER SHAFT INSPECTION

Universal Joint and Boots

1. Shift the transmission to .
2. Raise the vehicle on a lift (see **LIFT AND SUPPORT POINTS**).
3. Check the center support bearing (A) for excessive play or rattle. If the center support has excessive play or rattle, replace the propeller shaft assembly.

Fig. 114: Identifying Center Support Bearing And Rubber Portion Mount
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the rubber portion of the mount (B) for damage and deterioration. If the rubber portion is damaged or deteriorated, replace the propeller shaft assembly.
5. Check the universal joints for excessive play or rattle. If the universal joints have excessive play or rattle, replace the propeller shaft assembly.

Propeller Shaft Runout

6. Install a dial indicator with its needle on the center of No. 1 propeller shaft or No. 2 propeller shaft.
7. Turn the other propeller shaft slowly, and check the runout. Repeat this procedure for the other propeller shaft.

No. 1 Propeller Shaft Runout Service Limit: 1.5 mm (0.06 in.)

**No. 1 Propeller Shaft Runout
Service Limit: 1.5 mm (0.06 in.)**

Fig. 115: Identifying Propeller Shaft Runout No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

No. 2 Propeller Shaft Runout Service Limit: 1.5 mm (0.06 in.)

**No. 2 Propeller Shaft Runout
Service Limit: 1.5 mm (0.06 in.)**

Fig. 116: Identifying Propeller Shaft Runout No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If the runout on either propeller shaft exceeds the service limit, replace the propeller shaft assembly.

PROPELLER SHAFT REMOVAL

1. Raise the vehicle on a lift.
2. Remove the propeller shaft protector.

Fig. 117: Identifying Propeller Shaft Protector And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Make a reference mark (A) across the No. 1 propeller shaft (B) and transfer companion flange (C).

Fig. 118: Identifying No. 1 Propeller Shaft And Transfer Companion Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Separate the No. 1 propeller shaft from the transfer assembly.
5. Remove the center support bearing mounting bolts.

Fig. 119: Identifying Center Support Bearing Mounting Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Make a reference mark (A) across the No. 2 propeller shaft (B) and rear differential companion flange (C).

**Fig. 120: Identifying No. 2 Propeller Shaft And Transfer Companion Flange**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Separate the No. 2 propeller shaft from the rear differential, then remove the propeller shaft assembly.

PROPELLER SHAFT INSTALLATION

1. If you are installing a new propeller shaft, go to step 2.

If you are reinstalling the original propeller shaft, go to step 3.

2. Install the new propeller shaft (A) onto the rear differential (B), by aligning the reference mark (C) on the new propeller shaft with the factory reference mark (D) on the companion flange (E). Do not use the marks you made on the companion from the removal procedure. If there are no factory marks on the companion flange, go to step 4.

Fig. 121: Identifying Reference Mark On Propeller Shaft With Factory Reference Mark On Companion Flange

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the No. 2 propeller shaft (A) to the rear differential (B) by aligning the reference marks (C) you made during the removal procedure.

Fig. 122: Identifying No. 2 Propeller Shaft To Rear Differential With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Attach the No. 2 propeller shaft to the rear differential with new mounting bolts. Tighten the bolts to the specified torque.
5. Install the center support bearing mounting bolts. Make sure you use new bolts.

Fig. 123: Identifying Center Support Bearing Mounting Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the No. 1 propeller shaft (A) onto the transfer companion flange (B) by aligning the reference mark (C). Make sure you use new mounting bolts.

Fig. 124: Identifying No. 1 Propeller Shaft Onto Transfer Companion Flange With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the propeller shaft protector.

Fig. 125: Identifying Propeller Shaft Protector With Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If you installed a new propeller shaft, test drive the vehicle at 55 mph (88 kph) and check for noise or vibration.
 - If there is no noise or vibration, the repair is complete.
 - If there is a noise or vibration, go to step 9.
9. Remove the mounting bolts from the propeller shaft at the rear differential companion flange. Note the current alignment of the propeller shaft to rear differential companion flange.
10. Rotate the propeller shaft 180 degrees from its current alignment with the rear differential companion flange.
11. Install new mounting bolts and tighten them to the specified torque.

BRAKE SYSTEM INSPECTION AND TEST

Inspect the brake system components listed. Repair or replace any parts that are leaking or damaged.

Component Inspections:

COMPONENT INSPECTIONS

Component	Procedure	Also check for
Master Cylinder	Look for damage or signs of fluid leakage at: • Reservoir or reservoir grommets.	Bulging seal at reservoir cap. This is a

2008 Acura MDX

2007-08 BRAKES Conventional Brake Components - MDX

	• Line joints. • Between master cylinder and booster.	sign of fluid contamination.
Brake Hoses	Look for damage or signs of fluid leakage at: • Line joints and banjo bolt connections. • Hoses and lines, also inspect for twisting or damage.	Bulging, twisted, or bent lines.
Caliper	Look for damage or signs of fluid leakage at: • Piston seal. • Banjo bolt connections. • Bleed screw.	Seized or sticking caliper pins.
VSA Modulator-control Unit	Look for damage or signs of fluid leakage at: • Line joints. • Modulator-control unit.	

BRAKE SYSTEM TEST

Brake pedal sinks/fades when braking

1. Set the parking brake, and start the engine, then turn off the A/C. Allow the engine to warm up to normal operating temperature (radiator fan comes on twice).
2. Attach a 50 mm (2 in.) piece of masking tape along the bottom of the steering wheel, and draw a horizontal reference mark across it.
3. With the transmission in the P or N, press and hold the brake pedal lightly (about the same pressure needed to keep an A/T-equipped vehicle from creeping), then release the parking brake.
4. While still holding the brake pedal, hook the end of the tape measure behind the brake pedal, then pull the tape up to the steering wheel. Note the measurement between the brake pedal and the reference mark on the steering wheel.
5. Apply steady pressure to the brake pedal for 3 minutes.
6. Watch the tape measure.
 - If the measurement increases 10 mm (3/8 in.) or less, the master cylinder is OK.
 - If the measurement increases more than 10 mm (3/8 in.), replace the master cylinder.

SYMPTOM TROUBLESHOOTING

RAPID BRAKE PAD WEAR, VEHICLE VIBRATION (AFTER A LONG DRIVE), OR HIGH, HARD

BRAKE PEDAL

NOTE: **Make sure that the caliper pins are installed correctly.**

The upper caliper pin B and lower caliper pin A are different. If the pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear. For proper caliper pin location (see **FRONT BRAKE CALIPER OVERHAUL**).

1. Drive the vehicle until the brakes drag or until the pedal is high and hard. This can take 20 or more brake pedal applications during an extended test-drive.
2. With the engine running, raise the vehicle on a lift, and spin all four wheels by hand.

Is there brake drag at any of the wheels?

YES - Go to step 3.

NO - Look for other causes of pad wear, high pedal, or vehicle vibration.

3. Turn the ignition switch to LOCK (0), press the brake pedal several times to deplete the vacuum in the brake booster, and then spin the wheels again to check for brake drag.

Is there brake drag at any of the wheels?

YES - Go to step 4.

NO - Replace the brake booster (see **BRAKE BOOSTER REPLACEMENT**).

4. Without removing the brake lines, unbolt and separate the master cylinder from the booster, then spin the wheels to check for brake drag.

Is there brake drag at any of the wheels?

YES - Go to step 5.

NO - Check the brake pedal position switch adjustment and pedal free play (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

5. Loosen the hydraulic lines at the master cylinder, then spin the wheels to check for brake drag.

Is there brake drag at any of the wheels?

YES - Go to step 6.

NO - Check the master cylinder reservoir for contamination in the brake fluid. If you find contamination, flush the entire brake system of all contaminated fluid. If the brake fluid is OK, replace the master cylinder (see **MASTER CYLINDER REPLACEMENT**).

- Loosen the bleed screws at each caliper, then spin the wheels to check for brake drag.

Is there brake drag at any of the wheels?

YES - Check the master cylinder reservoir for contamination in the brake fluid. If you find contamination, flush the entire brake system of all contaminated fluid. If the brake fluid is OK, disassemble and repair the caliper on the wheel(s) with brake drag.

NO - Look for and replace any damaged brake lines. If all brake lines are OK, replace the VSA modulator-control unit (see VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION).

BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT

PEDAL HEIGHT

- Turn the brake pedal position switch (A) counterclockwise, and pull it back until it is no longer touching the brake pedal.

Fig. 3: Identifying Brake Pedal Position Switch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Pull back the carpet and find the cutout (B) in the insulation. Measure the pedal height (C) at the center of the pedal pad (D) to the floor without the insulation.

Standard pedal height (with carpet removed): 178 mm (7 in.)

- Loosen the pushrod locknut (A), and screw the pushrod (8) in or out with pliers until the standard pedal height from the floor is reached. After adjustment, tighten the locknut firmly. Do not adjust the pedal height with the pushrod pressed.

Fig. 4: Identifying Pushrod Locknut With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Brake Pedal Position Switch Clearance

4. Lift up on the brake pedal by hand. Push in the brake pedal position switch until its plunger is fully pressed (threaded end (A) touching the pad (B) on the pedal arm). Turn the switch 45° clockwise to lock it. The gap between the brake pedal position switch and the pad is automatically adjusted to 0.7 mm (0.028 in.) by locking the switch. Make sure the brake lights go off when the pedal is released.

Fig. 5: Identifying Brake Pedal Position Switch Clearance
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check the brake pedal free play.

PEDAL FREE PLAY

1. With the ignition switch LOCK (0), inspect the play (A) at the brake pedal pad (B) by pushing the brake pedal by hand. If the brake pedal free play is out of specification, adjust the brake pedal position switch (C). If the brake pedal free play is insufficient, it may result in brake drag.

Free play: 1-5 mm (1/16-3/16 in.)

Free play: 1—5 mm (1/16—3/16 in.)

Fig. 6: Identifying Pedal Free Play

Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE INSPECTION AND ADJUSTMENT

INSPECTION

1. Press the parking brake pedal (A) with 294 N (30 kgf, 66 lbf) of force to fully apply the parking brake. The parking brake pedal should be locked within the specified number of clicks.

Pedal locked clicks: 9 to 11

Pedal locked clicks: 9 to 11

Fig. 7: Identifying Parking Brake Pedal With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Adjust the parking brake if the pedal clicks are not within the specification.

NOTE: Minor parking brake pedal adjustments (1 to 2 clicks) can be made with the adjusting nut (see parking brake minor adjustment). If a larger adjustment is required, follow the major adjustment procedure using the adjuster nut at the parking brake drum (see parking brake major adjustment). After installing new parking brake shoes and/or new brake disc/drum, make sure you drive the vehicle for "break-in" (see PARKING BRAKE SHOE LINING BREAK-IN).

Minor Adjustment

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see LIFT AND SUPPORT POINTS).
2. Fully release the parking brake pedal.
3. Press the parking brake pedal 1 click.
4. Tighten the parking brake adjusting nut (A) until the parking brakes drag slightly when the rear wheels are turned.

Fig. 8: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the parking brake pedal fully, and check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.
6. Make sure the parking brakes are fully applied when the parking brake pedal is pressed all the way.

Major Adjustment (to be done when replacing parking brake shoes and after lining surface break-in)

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Fully release the parking brake pedal.
3. Back off the parking brake adjusting nut (A) in the parking brake pedal.

Fig. 9: Identifying Parking Brake Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the rear wheels.
5. Remove the access plug (A).

Fig. 10: Identifying Access Plug

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Turn the ratchet teeth on the adjuster nut (B) with a flat-tip screwdriver (C) until the shoes lock against the parking brake drum. Then back off the adjuster 10 clicks, and install the access plug.
7. Clean the mating surfaces of the brake disc/drum and the inside of the wheel, then install the rear wheels.
8. Do the minor adjustment procedure.

BRAKE SYSTEM BLEEDING

NOTE:

- Do not reuse the drained fluid. Use only clean Acura DOT 3 Brake Fluid from an unopened container. Using a non-Acura brake fluid can cause corrosion and shorten the life of the system.
- Do not mix different brands of brake fluid; they may not be compatible.
- Make sure no dirt or other foreign matter is allowed to contaminate the brake fluid.
- Do not spill brake fluid on the vehicle, it may damage the paint; if brake fluid does contact the paint, wash it off immediately with water.
- The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure and checked after bleeding each wheel. Add fluid as required.

1. Make sure the brake fluid level in the reservoir (A) is at the MAX (upper) level line (B).

Fig. 11: Identifying Reservoir Is At MAX (Upper) Level Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Have someone slowly pump the brake pedal several times, then apply steady pressure.
3. Start the bleeding at the driver's side of the front brake system.

NOTE: Bleed the calipers or the wheel cylinders in the sequence shown.

Fig. 12: Identifying Bleeding Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Attach a length of clear drain tube (A) to the bleed screw (B), then, loosen the bleed screw to allow air to escape from the system. Then tighten the bleed screw securely.

Front

Fig. 13: Identifying Drain Tube And Bleed Screw With Torque Specification (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 14: Identifying Drain Tube And Bleed Screw With Torque Specification (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Refill the master cylinder reservoir to the MAX (upper) level line.
6. Repeat the procedure for each brake circuit until there are no air bubbles are in the fluid.

BRAKE SYSTEM INDICATOR CIRCUIT DIAGRAM

Fig. 15: Brake System Indicator Circuit Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE SWITCH TEST

NOTE: If both the ABS/VSA indicator, the brake system indicator, and the trailer stability assist warning come on at the same time, check the VSA system first (see GENERAL TROUBLESHOOTING INFORMATION).

1. Disconnect the parking brake switch connector (A) from the parking brake switch (B).

Fig. 16: Identifying Parking Brake Switch Connector And Parking Brake Switch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between the positive terminal (C) and body ground.
 - With the parking brake pedal pressed, there should be continuity.
 - With the parking brake pedal released, there should be no continuity.

NOTE: If the parking brake switch and the fluid level switch are OK, but the brake system indicator does not function, do the gauge control module test (see SELF-DIAGNOSTIC FUNCTION).

3. Connect the parking brake switch connector to the parking brake switch.

BRAKE FLUID LEVEL SWITCH TEST

Check for continuity between the terminals (1) and (2) with the float in the down position and in the up position.

- NOTE:**
- Remove the brake fluid completely from the reservoir. With the float down, there should be continuity.
 - Fill the reservoir with brake fluid to the MAX (upper) level (A). With the float up, there should be no continuity.
 - If both the ABS/VSA indicator, the brake system indicator, and the trailer stability assist warning come on at the same time, check the VSA system first (see GENERAL TROUBLESHOOTING INFORMATION).
 - If the parking brake switch and fluid level switch are OK, but the brake system indicator does not function, do the gauge control module test (see SELF-DIAGNOSTIC FUNCTION).

Fig. 17: Identifying Brake Fluid Level Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT BRAKE PAD INSPECTION AND REPLACEMENT

Special Tools Required

Brake caliper piston compressor 07AAE-SEPA101

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.

INSPECTION

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Check the thickness (A) of the inner pad (B) and outer pad (C). Do not include the thickness of the backing plate.

Brake pad thickness:

Standard: 10.6-11.2 mm (0.42-0.44 in.)

Service limit: 1.6 mm (0.06 in.)

Inner pad

Fig. 18: Identifying Thickness Of Inner Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Outer pad

Fig. 19: Identifying Thickness Of Outer Pad

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the brake pad thickness is less than the service limit, replace the front brake pads as a set.
5. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheels.

REPLACEMENT

1. Remove some brake fluid from the master cylinder.
2. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
3. Remove the front wheels.
4. Remove the flange bolt (A), and pivot the caliper (B) up out of the way. Check the hose and pin boots for damage and deterioration.

Fig. 20: Identifying Flange Bolt And Pivot Caliper

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the pad shims (A) and brake pads (B).

Fig. 21: Identifying Pad Shims And Brake Pads
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the pad retainers (A).

NOTE: The upper and lower pad retainers are different. During installation, make sure the pad retainers are in proper positions.

Fig. 22: Identifying Pad Retainers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks. Verify that the caliper pins (C) move in and out smoothly. Clean and lube if needed.
8. Inspect the brake disc, and check for damage and cracks (see **FRONT BRAKE DISC INSPECTION**).
9. Install the pad retainers. Wipe excess assembly paste off the retainers. Keep the assembly paste off the

discs and pads.

10. Mount the brake caliper piston compressor tool (A) on the caliper body (B).

Fig. 23: Identifying Brake Caliper Piston Compressor Tool And Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Press in the piston with the brake caliper piston compressor tool so the caliper will fit over the brake pads. Make sure the piston boot is in position to prevent damaging it when pivoting the caliper down.

NOTE: Be careful when pressing in the piston; brake fluid might overflow from the master cylinder's reservoir. If brake fluid gets on any painted surface, wash it off immediately with water.

12. Remove the brake caliper piston compressor tool.
13. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B) and the other areas indicated by the arrows. Wipe excess assembly paste off the pad shims and brake pads. Contaminated brake discs or brake pads reduce stopping ability. Keep grease and assembly paste off the brake discs and brake pads.

Fig. 24: Identifying Brake Parts Grease Area Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the brake pads and pad shims correctly. Install the brake pad with the wear indicator (C) on the upper inside. If you are reusing the brake pads, always reinstall the brake pads in their original positions to prevent a momentary loss of braking efficiency.
15. Pivot the caliper down into position. Install the flange bolt (A), and tighten it to the specified torque.

Fig. 25: Identifying Flange Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheels.
17. Press the brake pedal several times to make sure the brakes work.

NOTE: Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.

18. Add brake fluid as needed.
19. After installation, check for leaks at hose and line joints or connections, and retighten if necessary. Test-drive the vehicle, then recheck for leaks (see **BRAKE HOSE AND LINE INSPECTION**).

FRONT BRAKE DISC INSPECTION

RUNOUT

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Remove the brake pads (see **REPLACEMENT**).
4. Inspect the brake disc surface for damage and cracks. Clean the brake disc thoroughly, and remove all rust.
5. Install suitable flat washers (A) and wheel nuts (B), and tighten the wheel nuts to the specified torque to hold the brake disc securely against the hub.

Fig. 26: Identifying Flat Washers And Wheel Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Set up the dial gauge against the brake disc as shown, and measure the runout at 10 mm (3/8 in.) from the outer edge of the brake disc.

Brake disc runout:

Service limit: 0.04 mm (0.0016 in.)

7. If the brake disc is beyond the service limit, refinish the brake disc with a commercially available on-car

brake lathe.

Max. refinishing limit: 26.0 mm (1.02 in.)

NOTE:

- If the brake disc is beyond the service limit for refinishing, replace it (see FRONT BRAKE DISC REPLACEMENT).
- A new brake disc should be refinished if its runout is greater than 0.04 mm (0.0016 in.).

THICKNESS AND PARALLELISM

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see LIFT AND SUPPORT POINTS).
2. Remove the front wheels.
3. Remove the brake pads (see REPLACEMENT).
4. Using a micrometer, measure the brake disc thickness at eight points, about 45° apart and 10 mm (3/8 in.) in from the outer edge of the brake disc. Replace the brake disc if the smallest measurement is less than the max. refinishing limit.

Brake disc thickness:

Standard: 27.9-28.1 mm (1.10-1.11 in.)

Max. refinishing limit: 26.0 mm (1.02 in.)

Brake disc parallelism: 0.015 mm (0.0006 in.) max.

NOTE: This is the maximum allowable difference between the thickness measurements.

Fig. 27: Identifying Brake Disc Thickness

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the brake disc is beyond the service limit for parallelism, refinish the brake disc with a commercially available on-car brake lathe.

NOTE: If the brake disc is beyond the service limit for refinishing, replace it (see **FRONT BRAKE DISC REPLACEMENT**).

FRONT BRAKE DISC REPLACEMENT

NOTE: Keep any grease off the brake disc and brake pads.

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheel.
3. Remove the brake hose bracket mounting bolt (A).

**Fig. 28: Identifying Brake Hose Bracket Mounting Bolt With Torque Specifications**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the brake caliper bracket mounting bolts (B), then remove the caliper assembly (C) from the knuckle. To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage. Do not twist the brake hose excessively.
5. Remove the brake disc flat screws (A).

Fig. 29: Identifying Brake Disc Flat Screws With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the brake disc (B) from the hub bearing unit.

NOTE: If the brake disc is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (C) into the brake disc to push it away from the hub bearing unit. Turn each bolt 90 degrees to prevent the brake disc from binding.

7. Install the brake disc in the reverse order of removal.

NOTE: Before installing the brake disc, clean the mating surfaces of the hub bearing unit and the inside of the brake disc.

8. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheel.

FRONT BRAKE CALIPER OVERHAUL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.

Remove, disassemble, inspect, reassemble, and install the caliper, and note these items:

NOTE: Make sure that the caliper pins are installed correctly. Upper caliper pin B and lower caliper pin A are different. If these caliper pins are installed in the wrong

location, it will cause vibration, uneven or rapid pad wear, and possibly uneven tire wear.

- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.
- To prevent dripping brake fluid, cover disconnected hose joints with rags or shop towels.
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Replace parts with new ones as specified in the illustration.
- Make sure no dirt or other foreign matter gets in the brake fluid.
- Make sure no grease or oil gets on the brake discs or pads.
- When reusing brake pads, always reinstall them in their original positions to prevent loss of braking efficiency.
- Do not reuse drained brake fluid. Use only clean Acura DOT 3 Brake Fluid from an unopened container. Using a non-Acura brake fluid can cause corrosion and shorten the life of the system.
- Do not mix different brands of brake fluid as they may not be compatible.
- Coat the pistons, piston seal grooves, and caliper bores with clean brake fluid.
- Replace all rubber parts with new ones whenever disassembled.
- After installing the caliper, check the brake hose and line for leaks, interference, and twisting.
- When you apply the silicone grease, make sure not to get any on the terminal part of the connectors and surrounding switches. Also do not touch the switches and the terminal part of the connectors with hands or gloves that have silicone grease on them.

Fig. 30: Identifying Front Brake Caliper Overhaul With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MASTER CYLINDER REPLACEMENT

NOTE:

- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.
- Be careful not to damage or deform the brake lines during removal and installation.
- To prevent the brake fluid from flowing, plug and cover the hose ends and joints with a shop towel or equivalent.

1. Open the air cleaner housing cover (see [AIR CLEANER ELEMENT INSPECTION/REPLACEMENT](#)).
2. Remove the reservoir cap and the brake fluid from the master cylinder reservoir with a syringe.
3. Disconnect the brake fluid level switch connector (A).

Fig. 31: Identifying Brake Fluid Level Switch Connector With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the brake lines (B) from the master cylinder (C). To prevent spills, cover the hose joints with rags or shop towels.
5. Remove the master cylinder mounting nuts (D).
6. Remove the master cylinder from the brake booster (E). Be careful not to bend or damage the brake lines when removing the master cylinder.
7. Remove the O-ring (F) from the master cylinder.

NOTE: Replace the O-ring whenever the master cylinder is removed.

8. Install the master cylinder in the reverse order of removal, and note these items:
 - Check the brake booster pushrod clearance (see **BRAKE BOOSTER PUSHROD CLEARANCE ADJUSTMENT**).
 - Coat the new O-ring with silicone oil (Shin-Etsu KF 54).
 - When you apply the silicone oil, make sure not to get any on the terminal part of the connectors and surrounding switches. Also do not touch the switches and the terminal part of the connectors with hands or gloves that have silicone grease on them.
 - Check the brake pedal height and free play after installing the master cylinder, and adjust it if necessary (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).
9. Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
10. Spin the wheels to check for brake drag.

MASTER CYLINDER INSPECTION

1. Inspect and note these items:

- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Do not try to disassemble the master cylinder assembly. Replace the master cylinder assembly with a new part if necessary.
- Do not allow dirt or foreign matter to contaminate the brake fluid.

Fig. 32: Inspecting Master Cylinder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE BOOSTER TEST

FUNCTIONAL TEST

1. With the ignition switch at LOCK (0), press the brake pedal several times to deplete the vacuum reservoir, then press the brake pedal hard, and hold it for 15 seconds. If the brake pedal sinks, either the master cylinder is bypassing internally, or the brake system is leaking. Inspect the brake hoses and lines (see **BRAKE HOSE AND LINE INSPECTION**).
2. Start the engine with the brake pedal pressed. If the brake pedal sinks slightly, the vacuum booster is operating normally. If the brake pedal height does not vary, do the brake system test (see **BRAKE SYSTEM INSPECTION AND TEST**).

LEAK TEST

1. Press the brake pedal with the engine running, then stop the engine. The brake pedal height should not vary while pressed for 30 seconds. If the pedal height rises, go to step 6. If it does not rise, go to step 2.
2. Start the engine and let it idle for 30 seconds. Turn the ignition switch to LOCK (0), and wait 30 seconds. Press the brake pedal several times using normal pressure. When the pedal is first pressed, it should be low. On consecutive applications, the pedal height should gradually rise. Does the pedal rise on each consecutive application? If it rises, the booster is OK. If it does not, go to step 3.
3. Disconnect the brake booster vacuum hose (A) at the booster. The check valve is built into the hose.

Fig. 33: Identifying Brake Booster Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Start the engine, and let it idle. There should be vacuum available. If no vacuum is available, the check valve is not working properly. Replace the brake booster vacuum hose and check valve, and retest. If vacuum is found, go to step 5.
5. With the ignition switch at LOCK (0), reconnect the vacuum hose to the brake booster.
6. Start the engine, and then pinch the brake booster vacuum hose between the check valve and the booster.
7. Turn the ignition switch to LOCK (0), and wait 30 seconds. Press the brake pedal several times using normal pressure. When the pedal is first pressed, it should be low. On consecutive applications, the pedal height should gradually rise.
 - If the pedal position does not vary, inspect the O-ring between the master cylinder and booster. If the O-ring is OK, replace the brake booster.
 - If the pedal position varies, replace the brake booster vacuum hose/check valve assembly.

BRAKE BOOSTER PUSHROD CLEARANCE ADJUSTMENT

Special Tools Required

Booster piston holder 070AB-SJA0100

NOTE:

- **Brake booster pushrod to piston clearance must be checked and readjusted before installing a new master cylinder.**
- **The master cylinder assembly comes with a tool that must be used to adjust the clearance between the brake booster pushrod and the master cylinder piston.**
- **Use only the tool that comes with the new master cylinder to check the pushrod clearance. Do not use any other tool.**
- **Make sure to discard the tool supplied with the master cylinder after its use.**
- **The brake booster must be installed on the vehicle before doing the pushrod clearance adjustment.**

- If the booster is removed, check the pushrod length (A) as shown. If the length is incorrect, loosen the pushrod locknut (B), and turn the yoke (C) in or out to adjust.

Fig. 34: Identifying Pushrod Length With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Measure the clearance between the tool (A) supplied with master cylinder and brake booster pushrod (B). Make sure that the tool is lying flat against the surface (C) of the brake booster, and that the tip of the tool contacts the pushrod. If the tool will not lie flat (D) or there is a gap (E) between the tool and the pushrod, go to step 2. If the clearance is correct, go to step 3.

Fig. 35: Identifying Clearance Between Tool With Master Cylinder And Brake Booster Pushrod
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the clearance is incorrect, use the booster piston holder to hold the pushrod (A) and turn the adjusting screw (B) clockwise to inward or counterclockwise to outward.

Fig. 36: Identifying Adjusting Screw

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the master cylinder (see MASTER CYLINDER REPLACEMENT).

BRAKE BOOSTER REPLACEMENT

1. Remove the air cleaner (see AIR CLEANER ELEMENT INSPECTION/ REPLACEMENT).
2. Remove the master cylinder (see MASTER CYLINDER REPLACEMENT).
3. Remove the brake lines (A) from the VSA modulator-control unit (B).

Fig. 37: Identifying Brake Lines Of VSA Modulator-Control Unit With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the brake booster vacuum hose (C) from the brake booster.
5. Remove the driver's dashboard undercover (see DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION).

6. Remove the lock pin (A) and the joint pin (B), then disconnect the yoke from the brake pedal.

Fig. 38: Identifying Lock Pin, Joint Pin And Brake Pedal With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the brake booster mounting nuts (C).
8. Remove the brake booster (A) from the engine compartment.

NOTE:

- Be careful not to damage the booster surfaces and threads of the booster stud bolts.
- Be careful not to bend or damage the brake lines.

Fig. 39: Identifying Brake Booster Of Engine Compartment
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the brake booster in the reverse order of removal, and note these items:
 - Adjust the pushrod clearance before installing the brake booster (see **BRAKE BOOSTER**

PUSHROD CLEARANCE ADJUSTMENT).

- Install the master cylinder after installing the brake booster (see **MASTER CYLINDER REPLACEMENT**).
- Check the brake pedal height and free play after installing the master cylinder, and adjust it if necessary (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).
- Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).

REAR BRAKE PAD INSPECTION AND REPLACEMENT**Special Tools Required**

Brake caliper piston compressor 07AAE-SEPA101

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.

INSPECTION

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Check the thickness (A) of the inner pad (B) and outer pad (C). Do not include the thickness of the backing plate.

Brake pad thickness:

Standard: 9.6—10.2 mm (0.38—0.40 in.)

Service limit: 1.6 mm (0.06 in.)

Fig. 40: Identifying Thickness Of Inner Pad And Outer Pad

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the brake pad thickness is less than the service limit, replace the rear brake pads as a set.
5. Clean the mating surfaces of the brake disc/drum and the inside of the wheel, then install the rear wheels.

REPLACEMENT

1. Remove some brake fluid from the master cylinder.
2. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
3. Remove the rear wheels.
4. Remove the flange bolt (A), and pivot the caliper (B) up out of the way. Check the hose and pin boots for damage and deterioration.

**Fig. 41: Identifying Flange Bolt And Pivot Caliper**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the pad shims (A) and brake pads (B).

Fig. 42: Identifying Pad Shims And Brake Pads

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the pad retainers (A).

NOTE: The upper and lower pad retainers are different. During installation, make sure the pad retainers are in their proper positions.

Fig. 43: Identifying Pad Retainers, Caliper Bracket And Caliper Pins

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks. Verify that the caliper pins (C) move in and out smoothly. Clean and lube if needed.
8. Inspect the brake disc/drum, and check for damage and cracks (see **REAR BRAKE DISC INSPECTION**).
9. Install the pad retainers. Wipe excess assembly paste off the retainers. Keep the assembly paste off the discs and pads.

10. Mount the brake caliper piston compressor tool (A) on the caliper body (B).

Fig. 44: Identifying Brake Caliper Piston Compressor Tool And Caliper Body
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Press in the piston with the brake caliper piston compressor tool so the caliper will fit over the brake pads. Make sure the piston boot is in position to prevent damaging it when pivoting the caliper down.

NOTE: Be careful when pressing in the piston; brake fluid might overflow from the master cylinder's reservoir. If brake fluid gets on any painted surface, wash it off immediately with water.

12. Remove the brake caliper piston compressor tool.
13. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B), and the other areas indicated by the arrows. Wipe excess assembly paste off the pad shims and brake pads. Contaminated brake disc/drums or brake pads reduce stopping ability. Keep grease and assembly paste off the brake disc/drums and brake pads.

Fig. 45: Identifying Rear Brake Pad Grease Area

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the brake pads and pad shims correctly. Install the brake pad with the wear indicator (C) on the bottom inside. If you are reusing the brake pads, always reinstall the brake pads in their original positions to prevent a momentary loss of braking efficiency.
15. Pivot the caliper down into position. Install the flange bolt (A), and tighten it to the specified torque.

**Fig. 46: Identifying Flange Bolt With Torque Specification**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Clean the mating surfaces of the brake disc/drum and the inside of the wheel, then install the rear wheels.
17. Press the brake pedal several times to make sure the brakes work.

NOTE: Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.

18. Add brake fluid as needed.
19. After installation, check for leaks at hose and line joints or connections, and retighten if necessary. Test-drive the vehicle, then check for leaks (see **BRAKE HOSE AND LINE INSPECTION**).

REAR BRAKE DISC INSPECTION

RUNOUT

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.

3. Remove the brake pads (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**).
4. Inspect the brake disc/drum surface for damage and cracks. Clean the brake disc/drum thoroughly, and remove all rust.
5. Install suitable flat washers (A) and wheel nuts (B), and tighten the wheel nuts to the specified torque to hold the brake disc/drum securely against the hub.

Fig. 47: Identifying Brake Disc/Drum Surface For Damage And Cracks With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Set up the dial gauge against the brake disc/drum as shown, and measure the runout at 10 mm (3/8 in.) from the outer edge of the brake disc/drum.

Brake disc/drum runout:

Service limit: 0.04 mm {0.0016 in.}

7. If the brake disc/drum is beyond the service limit, refinish the brake disc/drum with a commercially available on-car brake lathe.

Max. refinishing limit: 9.0 mm (0.35 in.)

NOTE:

- If the brake disc/drum is beyond the service limit for refinishing, replace it (see **REAR BRAKE DISC REPLACEMENT**).
- A new brake disc/drum should be refinished if its runout is greater than 0.04 mm (0.0016 in.).

THICKNESS AND PARALLELISM

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).

2. Remove the rear wheels.
3. Remove the brake pads (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**).
4. Using a micrometer, measure the brake disc/drum thickness at eight points, about 45° apart and 10 mm (3/8 in.) in from the outer edge of the brake disc/drum. Replace the brake disc/drum if the smallest measurement is less than the max. refinishing limit.

Brake disc/drum thickness:

Standard: 10.9-11.1 mm (0.43-0.44 in.)

Max. refinishing limit: 9.0 mm (0.35 in.)

Brake disc/drum parallelism: 0.015 mm (0.0006 in.) max.

NOTE: This is the maximum allowable difference between the thickness measurements.

Fig. 48: Identifying Brake Disc/Drum Thickness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the brake disc/drum is beyond the service limit for parallelism, refinish the brake disc/drum with a commercially available on-car brake lathe.

NOTE: If the brake disc/drum is beyond the service limit for refinishing, replace it (see **REAR BRAKE DISC REPLACEMENT**).

REAR BRAKE DISC REPLACEMENT

NOTE: Keep any grease off the brake disc/drum and brake pads.

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheel.
3. Remove the brake caliper bracket mounting bolts (A), then remove the caliper assembly (B) from the knuckle. To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage. Do not twist the brake hose excessively.

Fig. 49: Identifying Brake Caliper Bracket Mounting Bolts And Caliper Assembly With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the parking brake.
5. Remove the brake disc/drum flat screws (A).

Fig. 50: Identifying Brake Disc/Drum Flat Screws With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the brake disc/drum (B) from the hub bearing unit.

NOTE:

- If may be necessary to back-off the parking brake adjuster nut (C) to remove the brake disc/drum from the hub bearing unit (see step 5 on MINOR ADJUSTMENT).
- If the brake disc/drum has stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (D) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees to prevent the brake disc/drum from binding.
- After installation, check the parking brake, and adjust it necessary (see PEDAL FREE PLAY).

7. Install the brake disc/drum in the reverse order of removal.

NOTE:

Before installing the brake disc/drum, clean the mating surfaces of the hub bearing unit and the inside of the brake disc/drum.

8. Clean the mating surfaces of the brake disc/drum and the inside of the wheel, then install the rear wheel.

REAR BRAKE CALIPER OVERHAUL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.

Remove, disassemble, inspect, reassemble, and install the caliper, and note these items:

- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.
- To prevent dripping brake fluid, cover disconnected hose joints with rags or shop towels.
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Replace parts with new ones as specified in the illustration.
- Make sure no dirt or other foreign matter gets in the brake fluid.
- Make sure no grease or oil gets on the brake discs or pads.
- When reusing brake pads, always reinstall them in their original positions to prevent loss of braking efficiency.

- Do not reuse drained brake fluid. Use only clean Acura DOT 3 Brake Fluid from an unopened container. Using a non-Acura brake fluid can cause corrosion and shorten the life of the system.
- Do not mix different brands of brake fluid as they may not be compatible.
- Coat the pistons, piston seal grooves, and caliper bores with clean brake fluid.
- Replace all rubber parts with new ones whenever disassembled.
- After installing the caliper, check the brake hose and line for leaks, interference, and twisting.
- When you apply the silicone grease, make sure not to get any on the terminal part of the connectors and surrounding switches. Also do not touch the switches and the terminal part of the connectors with hands or gloves that have silicone grease on them.

Fig. 51: Identifying Rear Brake Caliper Overhaul With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE INSPECTION

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).

2. Remove the rear wheels.
3. Release the parking brake, and remove the rear brake disc/drum (see **REAR BRAKE DISC REPLACEMENT**).

Fig. 52: Exploded View Of Parking Brake With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the parking brake linings (A) for cracking, glazing, wear, and contamination.

Fig. 53: Identifying Parking Brake Linings

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the parking brake lining thickness (B). Measurement does not include brake shoe thickness.

Parking brake lining thickness:

Standard: 3.9 mm (0.15 in.)

Service limit: 1.0 mm (0.04 in.)

6. If the parking brake lining thickness is less than the service limit, replace all of the parking brake shoes as a set (see **PARKING BRAKE SHOE REPLACEMENT**).
7. Check the hub (C) for smooth operation. If it requires servicing, replace the hub bearing unit (see **HUB BEARING UNIT REPLACEMENT**).
8. Measure the inside diameter of the parking brake drum with inside vernier calipers.

Parking brake drum inside diameter:

Standard: 210.0-210.1 mm

(8.268-8.272 in.)

Service limit: 211.0 mm (8.307 in.)

Parking brake drum inside diameter:

**Standard: 210.0—210.1 mm
(8.268—8.272 in.)**

Service limit: 211.0 mm (8.307 in.)

Fig. 54: Measuring Diameter Of Parking Brake Drum With Inside Vernier Calipers

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If the inside diameter of the parking brake drum is more than the service limit, replace the brake disc/drum.
10. Check the parking brake disc/drum for scoring, grooves, and cracks.
11. Clean the mating surfaces of the brake disc/drum and the inside of the wheel, then install the rear wheels.

PARKING BRAKE SHOE REPLACEMENT

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- Avoid breathing dust particles.
- Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.

DISASSEMBLY

1. Raise the rear of the vehicle, and support it with safety stands in the proper locations (see LIFT AND SUPPORT POINTS).
2. Remove the rear wheels.
3. Release the parking brake, and remove the rear brake disc/drum (see REAR BRAKE DISC REPLACEMENT).
4. Disconnect and remove the upper return springs (A).

Fig. 55: Identifying Upper Return Springs

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the tension pins (A) by pushing the respective retainer (B) and turning the pin.

Fig. 56: Identifying Tension Pins And Retainer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the strut (A).

Fig. 57: Identifying Strut

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Lower the parking brake shoe assembly.
8. Remove the forward brake shoe (A) and the adjuster assembly (B) by removing the lower return spring (C).

Fig. 58: Identifying Brake Shoe, Adjuster Assembly And Lower Return Spring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the rearward brake shoe by disconnecting the parking brake cable (A) from the parking brake lever (B).

Fig. 59: Identifying Parking Brake Cable And Parking Brake Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the U-clip (A), wave washer (B), and parking brake lever (C) from the brake shoe (D).

Fig. 60: Identifying U-Clip, Wave Washer And Parking Brake Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

1. Apply Plastilube #2 grease to the sliding surface of the pivot pin (A) of the rearward brake shoe (B).

Fig. 61: Identifying Grease Area Of Sliding Surface And Pivot Pin
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the parking brake lever (C) and wave washer (D) on the pivot pin, and secure with a new U-clip (E).
 - Install the wave washer with its convex side facing out.
 - Pinch the U-clip securely to prevent the parking brake lever from coming off the brake shoe.
3. Connect the parking brake cable (A) to the parking brake lever (B). Apply Plastilube #2 grease to the cable contact surface (C) on the backing plate.

Fig. 62: Identifying Parking Brake Cable And Parking Brake Lever
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply a thin coat of Plastilube #2 grease to the shoe ends and strut ends (A), sliding surfaces (B), and opposite edges of the parking brake shoe (C) as shown. Wipe off any excess. Keep the grease off the brake linings.

Fig. 63: Identifying Strut Ends, Sliding Surfaces And Parking Brake Shoe
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tension pin (A), the retainer spring (B), and the retainer (C) on the rearward brake shoe (D). Make sure the tension pin does not contact the parking brake lever.

Fig. 64: Identifying Tension Pin, Retainer Spring And Retainer
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install connecting rods A and B on the adjuster nut (C).

NOTE:

- Clean the threaded portions of connecting rod A and the sliding surface of connecting rod B, then coat them with rubber grease.
- Shorten connecting rod A by fully turning the adjuster nut.

Fig. 65: Identifying Connecting Rods And Adjuster Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Position the brake shoe adjuster assembly (D) on the parking brake shoes.
8. Hook the lower return spring (E) on the parking brake shoes.
9. Install the rod spring (A) to the strut (B) first. Then install the strut on the parking brake shoes.

Fig. 66: Identifying Rod Spring And Strut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the tension pin (A), the retainer spring (B), and the retainer (C) on the forward brake shoe (D).

Fig. 67: Identifying Tension Pin, Retainer Spring And Retainer
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the forward upper return spring (A) as shown.

Fig. 68: Identifying Upper Return Spring
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the rearward upper return spring (B) as shown.
13. Install the rear brake disc/drum and the rear brake caliper bracket in the reverse order of removal.
14. Do the major parking brake adjustment (see **MAJOR ADJUSTMENT (TO BE DONE WHEN REPLACING PARKING BRAKE SHOES AND AFTER LINING SURFACE BREAK-IN)**).

PARKING BRAKE SHOE LINING BREAK-IN

WARNING: Do this operation in a safe area.

NOTE:

- Do the brake lining surface break-in when replacing shoes with new brake linings and/or new rear brake disc/drum.

- Check the number of parking brake lever clicks. Adjust the parking brake before lining surface break-in (see MINOR ADJUSTMENT).

1. Park the vehicle on a firm, level surface.
2. Release the parking brake pedal.
3. Press the parking brake pedal 5 clicks.
4. Drive the vehicle for 1/4 mile (400 m) at about 31 mph (50 km/h).
5. Stop the vehicle, and release the parking brake for 5-10 minutes to allow the brake disc/drum to cool.
6. Repeat steps 3 through 5 two more times.
7. Check the parking brake pedal adjustment (see PEDAL FREE PLAY).

BRAKE PEDAL REPLACEMENT

1. Remove the driver's dashboard undercover (see DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION).
2. Remove the TPMS control unit (see TPMS CONTROL UNIT REPLACEMENT).
3. Disconnect the brake pedal position switch connector (A), and remove the harness clips.

Fig. 69: Identifying Brake Pedal Position Switch Connector And Harness Clips With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the lock pin (B) and joint pin (C).
5. Remove the harness and connector clips.
6. Remove the brake pedal bracket mounting bolt (D) and nuts (E).
7. Remove the brake pedal with bracket (F).
8. Install in the reverse order of removal.

2008 Acura MDX

2007-08 BRAKES Conventional Brake Components - MDX

9. Do the brake pedal and brake pedal position switch adjustment (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

BRAKE HOSE AND LINE INSPECTION

1. Inspect the brake hoses for damage, deterioration, leaks, interference, and twisting.
2. Check the brake lines for damage, rusting, and leaks. Also check for bent brake lines.
3. Check for leaks at hose and line joints and connections, and retighten if necessary.
4. Check the master cylinder and the VSA modulator-control unit for damage and leaks.

BRAKE HOSE AND LINE

Connection Point	Component	Connected to	Specified Torque Value	Note
A	Front brake caliper	Brake hose	34 N.m (3.5 kgf.m, 25 lbf.ft)	Banjo bolt
		Bleed screw	9 N.m (0.9 kgf.m, 7 lbf.ft)	
B	Rear brake caliper	Brake hose	34 N.m (3.5 kgf.m, 25 lbf.ft)	Banjo bolt
		Bleed screw	9 N.m (0.9 kgf.m, 7 lbf.ft)	
C	Brake hose	Brake line	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut
D	Master cylinder	Brake line	22 N.m (2.2 kgf.m, 16 lbf.ft)	Flare nut
E	VSA modulator-control unit	Brake line (12 mm nut)	22 N.m (2.2 kgf.m, 16 lbf.ft)	Flare nut
		Brake line (10 mm nut)	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut

Fig. 70: Identifying Brake Hose And Line

Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE HOSE REPLACEMENT

NOTE:

- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Replace parts with new ones whenever specified to do so.
- Do not spill brake fluid on the vehicle; it may damage the paint; if brake fluid gets on the paint, wash it off immediately with water.
- To prevent the brake fluid from flowing, plug and cover the hose ends and joints with a shop towel or equivalent material.

FRONT

1. Remove the front wheel.
2. Disconnect the brake line (A) from the brake hose (B), then remove the brake hose clip (C).

Fig. 71: Identifying Brake Line, Brake Hose And Brake Hose Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the banjo bolt (A), and disconnect the brake hose (B) from the caliper.

Fig. 72: Identifying Banjo Bolt, Brake Hose And Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the brake hose mounting bolt (C), then remove the brake hose.
5. Install the brake hose (A) with the mounting bolt (B).

Fig. 73: Identifying Brake Hose And Mounting Bolt With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Connect the brake hose to the caliper with the banjo bolt (C) and new sealing washers (D).
7. Install a new brake hose clip (A) to the brake hose (B) on the bracket, then connect the brake line (C). Do not twist the brake hose.

Fig. 74: Identifying Banjo Bolt And Sealing Washers With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. After installing the brake hose, bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
9. Do the following checks:
 - Check the brake hose and line joint for leaks, and tighten if necessary.
 - Check the brake hoses for interference and twisting.
10. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheel.

1. Remove the rear wheel.
2. Disconnect the brake lines (A) from the brake hoses (B), then remove the brake hose clips (C).

Fig. 75: Identifying Brake Lines, Brake Hoses And Brake Hose Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the front side brake hose (D).
4. Remove the banjo bolt (A), and disconnect the brake hose from the caliper.

Fig. 76: Identifying Banjo Bolt And Front Side Brake Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rear side brake hose (B).
6. Connect the rear side brake hose to the caliper with the banjo bolt (A) and new sealing washers (B).

Fig. 77: Identifying Banjo Bolt And Sealing Washers With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install new brake hose clip (A) to the brake hoses (B) on the brackets, then connect the brake lines (C). Do not twist the brake hoses.

Fig. 78: Identifying Brake Hose Clip, Brake Hoses And Brake Lines With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. After installing the brake hoses, bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
9. Do the following checks:
 - Check the brake hose and line joint for leaks, and tighten if necessary.
 - Check the brake hoses for interference and twisting.
10. Clean the mating surfaces of the brake disc/drum and the inside of the wheel, then install the rear wheel.

PARKING BRAKE CABLE REPLACEMENT

EXPLODED VIEW

Fig. 79: Exploded View Of Parking Brake Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- The parking brake cables must not be bent or distorted. This will lead to stiff operation and premature cable failure.
- Refer to the EXPLODED VIEW as needed during this procedure.

1. Loosen the parking brake cable adjusting nut (see MINOR ADJUSTMENT).
2. Remove the parking brake shoes, and disconnect the parking brake cable from the parking brake lever (see PARKING BRAKE SHOE REPLACEMENT).
3. Remove the parking brake cable mounting bolts from the backing plate (A).

Fig. 80: Identifying Parking Brake Cable Mounting Bolts And Backing Plate With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull the parking brake cable (B) and remove it from the backing plate.
5. Reinstall the parking brake cable in the reverse order of removal, and note these items:
 - Be careful not to bend or distort the cable.
 - Connect the parking brake cable to the brake lever, and install the parking brake shoes and rear brake disc/drum (see **PARKING BRAKE SHOE REPLACEMENT**).
 - Do the parking brake adjustment (see **MINOR ADJUSTMENT**). Apply the parking brake firmly 10 times then adjust it again.

Bumpers - MDX

FRONT BUMPER REMOVAL/INSTALLATION

NOTE:

- Put on gloves to protect your hands.
- Have an assistant help you when removing and installing the front bumper.
- Take care not to scratch the front bumper and body.

1. Remove the front bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
2. Remove the bolts (A, B), screws (C, D), and clips (E, F) securing the front bumper (G).

Fastener Locations

A ▶ : Bolt, 2 B ▶ : Bolt, 2 C ▶ : Screw, 2

D ▶ : Screw, 2 E ▶ : Clip, 2 F ▶ : Clip, 9

Fig. 1: Identifying Front Bumper Bolts, Screw And Nuts With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull on the front bumper (A) at the wheel arch areas to release it from the hooks (B) on the side spacers (C).

Fig. 2: Identifying Front Bumper

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With the help of an assistant, while pulling the wheel arch portion away from the side spacer (A), pull the front bumper to release the bumper from the hooks (B) on the corner upper beam (C).

Fig. 3: Identifying Wheel Arch Of Side Spacer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Canada models with headlight washer: While pushing the retainer (A), pull the headlight washer tube (B) to disconnect it from a nozzle (C) of the washer motor. Release the washer tube from the tube clip (D).

Fig. 4: Identifying Retainer, Headlight Washer Tube, Nozzle And Washer Motor
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. With the help of an assistant, disconnect the front fog light connectors (A), then remove the front bumper (B).

Fig. 5: Identifying Front Fog Light Connectors And Front Bumper
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the bumper in the reverse order of removal, and note these items:
 - Make sure the front fog light connectors are plugged in properly, and the headlight washer tube is connected properly.
 - Make sure the front bumper engages the hooks (of both center upper beams and side spacers) on each side securely.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

FRONT BUMPER SKID TRIM REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the front bumper
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the front bumper (see [FRONT BUMPER REMOVAL/INSTALLATION](#)).
2. Remove all of the screws. Pry all of the hooks (A) up with a trim tool, then remove the front bumper skid trim (B) from the front bumper (C).

Fig. 6: Identifying Front Bumper Skid Trim, Front Bumper And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and push the hooks into place securely.

REAR BUMPER REMOVAL/INSTALLATION

NOTE:

- Put on gloves to protect your hands.
- Have an assistant help you when removing and installing the rear bumper.

- Take care not to scratch the rear bumper and body.

1. From the rear wheel arches on both sides, remove the screws (A, B, C) and clips (D) securing the rear bumper (E), and rear fender cover (F).

Fastener Locations**A ▶ : Screw, 2 B ▶ : Screw, 8 C ▶ : Screw, 4****D ▶ : Clip, 2**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove both taillights(See TAILLIGHT REPLACEMENT .

Fig. 8: Identifying Clips, Cap And Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the caps (A). Remove the bolts (B) and clips (C) securing the rear bumper (D).

NOTE: To remove the clips, pry the inner clip up at the edge near the line (E) on its head.

Fig. 9: Identifying Rear Bumper
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull on the rear bumper (A) at the wheel arch areas to release it from the hooks (B) on the side spacers (C).

Fig. 10: Identifying Hooks, Side Upper Spacer And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With the help of an assistant, while pulling the wheel arch portion away from the side spacers (A), pull the rear bumper to release the bumper from the hooks (B) on the side upper spacer (C), and from the hooks (D) on the side bracket (E).

Fig. 11: Identifying Bumper, Hooks And Upper Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. With the help of an assistant, pull out on the rear bumper to release the bumper (A) from the hooks (B) on both upper brackets (C).
7. Install the bumper in the reverse order of removal, and note these items:
 - Make sure the rear bumper engages the hooks (of both the side bracket, side spacers, and side upper spacers) on each side securely.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

REAR BUMPER SKID TRIM REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the front bumper.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the rear bumper (see REAR BUMPER REMOVAL/INSTALLATION).
2. Remove all of the bolts (A) and screws (B). Pry all of the hooks (C) up with a trim tool, then remove the rear bumper skid trim (D) from the rear bumper (E).

Fastener Locations

A ► : Bolt, 2 B ► : Screw, 7

Fig. 12: Identifying Rear Bumper Skid Trim And Rear Bumper With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and push the hooks into place securely.

REAR BUMPER AIR SPOILER REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the rear bumper.

1. Remove the rear bumper (see **REAR BUMPER REMOVAL/INSTALLATION**).
2. Remove the bolts (A) and clips (B), then remove the rear bumper air spoiler (C) from the rear bumper (D). Take care not to scratch the rear bumper.

Fig. 13: Identifying Rear Bumper Air Spoiler, Bolts And Screws With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the spoiler in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

REAR BUMPER REFLECTOR REPLACEMENT

NOTE:

- Put on gloves to prevent damage.
- Take care not to scratch the rear bumper and body.

1. Push out the clip (A), release the hook (B), then remove the rear bumper reflector (C).

Fig. 14: Identifying Rear Bumper Reflector Clip And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Reattach the hook to the rear bumper first, and push the clip into place securely.

DTC TROUBLESHOOTING

**DTC P0420: REAR BANK CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1);
DTC P0430: FRONT BANK CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 2)**

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- If some of the DTCs listed below are stored at the same time as DTC P0420 and/or P0430*, troubleshoot those DTCs first, then recheck for DTC P0420 and/or P0430*.

P0137, P0138, P0157, P0158, P2270, P2271, P2272*, P2273*: Secondary HO2S (Sensor 2)

P0141, P0161: Secondary HO2S (Sensor 2) heater

- **P0300: Random misfire.**
- **P0301 - P0306: No. 1, No. 2, No. 3, No. 4, No. 5, or No. 6 cylinder misfire detected.**
- **Poor quality fuel can cause these DTCs.**
- **Information marked with an asterisk (*) applies to the front bank (Bank 2).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Vehicle speed between 45-75 mph (72-120 km/h) for 5 minutes or more
 - Maintain the vehicle speed at 55 mph (88 km/h) for 1 minute or more with cruise control set
5. Monitor the OBD STATUS for DTC P0420 and/or P0430* in the DTCs MENU with the HDS.

Does the screen indicate EXECUTING?

YES - Go to step 6.

NO - Go to step 4 and recheck.

6. Continue test driving until a result comes on.
7. Monitor the OBD STATUS for DTC P0420 and/or P0430* in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Catalytic Converter System - MDX

YES - Go to step 8.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 4 and recheck.

8. Turn the ignition switch OFF.
9. Replace the WU-TWC:
 - For DTC P0420, replace the rear WU-TWC (Bank 1) (see **REAR**).
 - For DTC P0430, replace the front WU-TWC (Bank 2) (see **FRONT**).
10. Turn the ignition switch ON (II).
11. Reset the PCM with the HDS.
12. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
13. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
14. Test-drive for about 10 minutes, continually changing the vehicle speed.
15. Check the CAT MONITOR CONDITION B1 (B2)* in the DATA LIST with the HDS.

Is the condition OK?

YES - Go to step 16.

NO - Go to step 13 and recheck.

16. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Vehicle speed between 45-75 mph (72-120 km/h) for 5 minutes or more
 - Maintain the vehicle speed at 55 mph (88 km/h) for 1 minute or more with cruise control set.
17. Monitor the OBD STATUS for DTC P0420 and/or P0430* in the DTCs MENU with the HDS.

Does the screen indicate EXECUTING?

YES - Go to step 18.

NO - Go to step 16 and recheck.

18. Continue test driving until a result comes on.
19. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0420 and/or P0430 indicated?*

YES - Check for poor connections or loose terminals at the secondary HO2S (sensor 2) and the PCM,

then go to step 1.

NO - Go to step 20.

20. Monitor the OBD STATUS for DTC P0420 and/or P0430* in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 19, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the secondary HO2S (Sensor 2) and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 16.

WARM UP TWC REMOVAL/INSTALLATION

FRONT

1. Remove the radiator and A/C condenser fan assemblies (see **RADIATOR AND FAN REPLACEMENT**).
2. Disconnect the front air fuel ratio (A/F) sensor connector and front secondary heated oxygen sensor (secondary HO2S) connector.
3. Carefully remove the front WU-TWC.

Fig. 2: Identifying Front Air Fuel Ratio Sensor Connector And Front Secondary Heated Oxygen Sensor Connector With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully install the front WU-TWC, and tighten the nuts in a crisscross pattern in two or three steps.
5. Install the parts in the reverse order of removal.

REAR

1. Remove exhaust pipe A (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**).
2. Remove the intermediate shaft (see **INTERMEDIATE SHAFT REMOVAL**).
3. Disconnect the rear air fuel ratio (A/F) sensor connector and the rear secondary heated oxygen sensor (secondary HO2S) connector.
4. Remove the rear WU-TWC bracket, then remove the rear WU-TWC.

Fig. 3: Identifying Rear Air Fuel Ratio Sensor Connector And Rear Secondary Heated Oxygen Sensor Connector With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the rear WU-TWC, and tighten the nuts in a crisscross pattern in two or three steps.
6. Install the parts in the reverse order of removal.

UNDER-FLOOR TWC REMOVAL/INSTALLATION

1. Remove the under-floor TWC (A).

Fig. 4: Identifying Converter Cover And Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the converter cover (B).
3. Install the parts in the reverse order of removal with new gaskets (C) and new self-locking nuts (D).

2007-09 ELECTRICAL

Charging System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Charging System Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

2008 Acura MDX

2007-09 ELECTRICAL Charging System - MDX

TROUBLESHOOTING CHART

Symptom	Diagnostic procedure	Also check for
Charging system indicator does not come on with the ignition switch ON (II)	Troubleshoot the charging system indicator circuit (see <u>CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING</u>).	
Charging system indicator stays on	1. Check for a broken drive belt (see <u>DRIVE BELT INSPECTION</u>). 2. Check the drive belt auto-tensioner (see <u>DRIVE BELT AUTO-TENSIONER INSPECTION</u>). 3. Troubleshoot the charging system indicator circuit (see <u>CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING</u>).	
Battery discharged	1. Check for a poor connection at the battery terminal. 2. Test the battery (see <u>BATTERY TEST</u>). 3. Check for a broken drive belt (see <u>DRIVE BELT INSPECTION</u>). 4. Check the drive belt auto-tensioner (see <u>DRIVE BELT AUTO-TENSIONER INSPECTION</u>). 5. Troubleshoot the alternator and regulator circuit (see <u>ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING</u>). 6. Check for excessive parasitic electrical current draw with the ignition switch in the LOCK (0) position, and the key removed. The multiplex control unit may take up to 10 minutes to turn off (sleep mode) for some models.	
Battery overcharged	1. Test the battery (see <u>BATTERY TEST</u>). 2. Troubleshoot the alternator and regulator circuit (see <u>ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING</u>).	

CIRCUIT DIAGRAM

Fig. 2: Charging System - Circuit Diagram
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING

1. Turn the ignition switch to ON (II).

Does the charging system indicator come on?

YES - Go to step 2.

NO - Go to step 14.

2. Start the engine. Hold the engine speed at 2,000 rpm for 1 minute.

Does the charging system indicator go off?

YES - Charging system indicator circuit is OK. Go to the **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING** (see).

NO - Go to step 3.

3. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).

Does the charging system indicator flash?

YES - Go to step 4.

NO - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

4. Turn the ignition switch to LOCK (0).
5. Disconnect the alternator 4P connector.
6. Turn the ignition switch to ON (II).

Does the charging system indicator go off?

YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**), or repair the alternator (see **ALTERNATOR OVERHAUL**).

NO - Go to step 7.

7. Turn the ignition switch to LOCK (0).
8. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 in **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
9. Turn the ignition switch to ON (II).
10. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). If it doesn't communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
11. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the PCM from damage.

12. Disconnect PCM connector C (49P).
13. Check for continuity between PCM connector terminal C42 and body ground.

Fig. 3: Identifying Continuity Between PCM Connector Terminal C42 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the alternator and the PCM.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

14. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).

Does the charging system indicator flash?

YES - Go to step 15.

NO - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

15. Turn the ignition switch to LOCK (0).
16. Disconnect the alternator 4P connector.
17. Connect alternator 4P connector terminal No. 3 and body ground with a jumper wire.

Fig. 4: Identifying Alternator 4P Connector Terminal No. 3 And Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Turn the ignition switch to ON (II).

Does the charging system indicator come on?

YES - Replace the alternator (see ALTERNATOR REMOVAL AND INSTALLATION), or repair the alternator (see ALTERNATOR OVERHAUL).

NO - Go to step 19.

19. Connect the HDS to the DLC (see step 2 in HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)).
20. Turn the ignition switch to ON (II).
21. Make sure the HDS communicates with the vehicle and the PCM. If it doesn't communicate, troubleshoot the DLC circuit (see DLC CIRCUIT TROUBLESHOOTING).
22. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the PCM from damage.

23. Disconnect PCM connector C (49P).
24. Check for continuity between PCM connector terminal C42 and alternator 4P connector terminal No. 3.

Fig. 5: Identifying Continuity Between PCM Connector Terminal C42 And Alternator 4P Connector Terminal No. 3

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the PCM if it does not have the latest software (see PCM UPDATE), or substitute a known-good PCM (see SUBSTITUTING THE PCM), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see PCM REPLACEMENT).

NO - Repair open in the wire between the alternator and the PCM.

ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING

1. Make sure the battery connections are good and the battery is fully charged (see **BATTERY TEST**).
2. Remove the engine cover (see step **IGNITION COIL REMOVAL/INSTALLATION**).
3. Connect a VAT-40 (or equivalent tester), and turn the selector switch to position 1 (starting).

Fig. 6: Identifying VAT-40 (Or Equivalent Tester)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Start the engine. Hold the engine speed at 3,000 rpm, with no load, until the radiator fan comes on, then let it idle.
5. Raise the engine speed to 2,000 rpm, and hold it there.

Is the voltage over 15.1 V?

YES - Replace the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**) or rear housing assembly (see **ALTERNATOR OVERHAUL**).

NO - Go to step 6.

6. Release the accelerator pedal, and let the engine idle.
7. Turn off all the accessories. Select the charging test on the tester.
8. Remove the inductive pickup, and zero the ammeter.
9. Place the inductive pickup over the B terminal wire of the alternator so the arrow points away from the alternator.

10. Raise the engine speed to 2,000 rpm, and hold it there.

Is the voltage less than 13.5 V?

YES - Go to **ALTERNATOR CONTROL CIRCUIT TROUBLESHOOTING** .

NO - Go to step 11.

11. Apply a load with the VAT-40 until the battery voltage drops between 12-13.5 V.

Is the amperage 87.5 A or more?

YES - The charging system is OK.

NOTE: **If the charging system indicator is still on, replace the alternator (see ALTERNATOR REMOVAL AND INSTALLATION).**

NO - Replace the alternator (see ALTERNATOR REMOVAL AND INSTALLATION), or repair the alternator (see ALTERNATOR OVERHAUL).

ALTERNATOR CONTROL CIRCUIT TROUBLESHOOTING

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 in **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). If it doesn't communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs. If a DTC is present, diagnose and repair the cause before continuing with this test.
5. Disconnect the alternator 4P connector from the alternator.
6. Start the engine, and turn on the headlights to high beam.
7. Measure the voltage between alternator 4P connector terminal No. 2 and the positive terminal of the battery.

Fig. 7: Identifying Voltage Between Alternator 4P Connector Terminal No. 2 And Positive

Terminal Of Battery

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there less than 1 V?***YES** - Go to step 8.**NO** - Go to step 11.

8. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the PCM from damage.

9. Disconnect PCM connector C (49P).
10. Check for continuity between PCM connector terminal C43 and body ground.

Fig. 8: Identifying Continuity Between PCM Connector Terminal C43 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Repair short in the wire between the alternator and the PCM.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

11. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the PCM from damage.

12. Disconnect PCM connector C (49P).
13. Check for continuity between PCM connector terminal C43 and alternator 4P connector terminal No. 2.

Fig. 9: Identifying Continuity Between PCM Connector Terminal C43 And Alternator 4P Connector Terminal No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the alternator (see ALTERNATOR REMOVAL AND INSTALLATION), or repair the alternator (see ALTERNATOR OVERHAUL).

NO - Repair open in the wire between the alternator and the PCM.

DRIVE BELT INSPECTION

1. Inspect the belt for cracks and damage. If the belt is cracked or damaged, replace it.
2. Check that the auto-tensioner indicator (A) is within the standard range (B) as shown. If it is out of the standard range, replace the drive belt (see DRIVE BELT REPLACEMENT).

Fig. 10: Identifying Auto-Tensioner Indicator

Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVE BELT REPLACEMENT

Special Tools Required

Belt tension release tool Snap-on YA9317 or equivalent, commercially available

1. Move the auto-tensioner (A) using the belt tension release tool to relieve tension from the drive belt (B), then remove the drive belt.

Fig. 11: Identifying Auto-Tensioner With Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the new belt in the reverse order of removal.

DRIVE BELT AUTO-TENSIONER INSPECTION

Special Tools Required

Belt tension release tool Snap-on YA9317 or equivalent, commercially available

1. Turn the ignition switch to ON (II), then make sure to turn the A/C switch OFF.
2. With the engine OFF, check the position of the auto-tensioner indicator's pointer (A). Start the engine, then check the position again with the engine idling. If the position of the indicator moves or fluctuates a lot, replace the auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).

Fig. 12: Identifying Auto-Tensioner Indicator's Pointer
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for abnormal noise from the tensioner pulley. If you hear any abnormal noise, replace the auto-tensioner pulley.
4. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
5. Move the auto-tensioner within its limit using the belt tension release tool in the direction shown. Check that the tensioner moves smoothly and without any abnormal noise. If the tensioner does not move smoothly, or you hear abnormal noise, replace the auto-tensioner.

Fig. 13: Identifying Tensioner Moves Smoothly
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
7. Clamp the auto-tensioner (A) by using a 10 mm bolt (B), 8 mm bolt (C), and a vise (D) as shown. Do not clamp the auto-tensioner itself.

Fig. 14: Identifying Auto-Tensioner In Vise

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Attach a torque wrench (A) to the pulley bolt. Measure the torque when the tensioner is turned counterclockwise. If the torque is less than the specified value, replace the auto-tensioner.

Auto-tensioner Spring Torque:

50.5 N.m (5.15 kgf.m, 37.2 lbf.ft)

Fig. 15: Tightening Auto-Tensioner Spring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVE BELT AUTO-TENSIONER REPLACEMENT

1. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
2. Remove the splash shield (see step 31 in **ENGINE REMOVAL**).
3. Remove the auto-tensioner.

Fig. 16: Identifying Drive Belt Auto-Tensioner Pulley With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the auto-tensioner in the reverse order of removal.

TENSIONER PULLEY REPLACEMENT

1. Remove the auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
2. Remove the pulley bolt (A) (left-hand threads), and remove the tensioner pulley (B).

Fig. 17: Identifying Tensioner Pulley Bolt With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tensioner pulley in the reverse order of removal.

ALTERNATOR REMOVAL AND INSTALLATION

REMOVAL

1. Make sure you have the anti-theft codes for the audio system and navigation system (if equipped). Make sure the ignition switch is in the LOCK (0) position.
2. Disconnect the negative cable from the battery.
3. Remove the engine cover (see step 1 in **IGNITION COIL REMOVAL/INSTALLATION**).
4. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
5. Remove the A/C suction line from brackets (A).

Fig. 18: Identifying A/C Suction Line From Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the coolant reservoir (A), then remove power steering fluid reservoir (B) from the bracket.

Fig. 19: Identifying Coolant Reservoir And Power Steering Fluid Reservoir

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the harness bracket (A), then disconnect the A/C compressor clutch connector (B).

Fig. 20: Identifying Harness Bracket And A/C Compressor Clutch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the alternator connector (C) and the BLK wire (D) from the alternator.
9. Remove the mounting bolt (A) and alternator bracket mounting bolt (B), then remove the alternator.

Fig. 21: Identifying Alternator Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the alternator, and tighten the mounting bolt (A) and bracket mounting bolt (B).

Fig. 22: Identifying Bracket Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the alternator connector (A) and BLK wire (B) to the alternator.

Fig. 23: Identifying Alternator Connector And BLK Wire With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the harness bracket (C), then connect the A/C compressor clutch connector (D).
4. Install the power steering fluid reservoir (A) to the bracket, then install the coolant reservoir (B).

Fig. 24: Identifying Power Steering Fluid Reservoir And Coolant Reservoir
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the A/C suction line to the brackets (A).

Fig. 25: Identifying A/C Suction Line To Brackets With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the drive belt (see **DRIVE BELT INSPECTION**).
7. Install the engine cover (see step 1 in **IGNITION COIL REMOVAL/INSTALLATION**).
8. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
9. Do the steering column position memorization (see **STEERING COLUMN POSITION MEMORIZATION**).
10. Enter the anti-theft codes for the audio system and navigation system (if equipped).
11. Set the clock (on vehicles without navigation).

ALTERNATOR OVERHAUL

EXPLODED VIEW

Fig. 26: Exploded View Of Alternator Components
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Handle driver 07749-0010000
- Attachment, 42 x 47 mm 07746-0010300

NOTE: Refer to the EXPLODED VIEW as needed during this procedure.

Alternator Disassembly

1. Test the alternator and regulator before you remove them (see CHARGING SYSTEM INDICATOR

CIRCUIT TROUBLESHOOTING).

2. Remove the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**).
3. If the front bearing needs replacing, remove the pulley locknut with a 10 mm wrench (A) and a 22 mm wrench (B). If necessary, use an impact wrench.

Fig. 27: Identifying Pulley Locknut With Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the three flange nuts.

Fig. 28: Identifying Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the end cover (A) and the insulator (B). A.

Fig. 29: Identifying Cover And Insulator

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the brush holder.

Fig. 30: Identifying Brush Holder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the four bolts, then remove the rear housing assembly (A) and washer (B).

Fig. 31: Identifying Rear Housing Assembly And Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If you are not replacing the front bearing, go to step 13. Remove the rotor from the drive end housing.

Fig. 32: Identifying Rotor From Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Inspect the rotor shaft for scoring, and inspect the bearing journal surface in the drive end housing for seizure marks.
- If the rotor is damaged, replace the rotor assembly.
 - If the rotor is OK, go to step 10.
10. Remove the front bearing retainer plate.

Fig. 33: Identifying Front Bearing Retainer Plate With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Drive out the front bearing with a brass drift and hammer.

Fig. 34: Driving Front Bearing Out With Brass Drift And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install a new front bearing in the drive end housing with a hammer, the handle driver, and attachment (42x47 mm).

Fig. 35: Installing Front Bearing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Alternator Brush Inspection

13. Measure the length of both brushes (A) with a vernier caliper (B).
 - If either brush is shorter than the service limit, replace the brush holder assembly.
 - If the brush length is OK, go to step 14.

Alternator Brush Length

Standard (New): 10.5 mm (0.41 in.)

Service Limit: 1.5 mm (0.06 in.)

Fig. 36: Measuring Length Of Both Brushes With Vernier Caliper

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rotor Slip Ring Test

14. Check for continuity between the slip rings (A).

- If there is continuity, go to step 15.
- If there is no continuity, replace the rotor assembly.

Fig. 37: Identifying Slip Rings And Rotor With Rotor Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Check for continuity between each slip ring and the rotor (B) and the rotor shaft (C).
 - If there is no continuity, replace the rear housing assembly, and go to step 16.
 - If there is continuity, replace the rotor assembly.
16. Assemble the alternator in the reverse order of disassembly, and note these items:
 - Be careful not to get any grease or oil on the slip rings.
 - If you removed the pulley, tighten its locknut to 110 N.m (11.2 kgf.m, 81.0 lbf.ft) when you reinstall it.

2007-09 HVAC

Rear Climate Control - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Rear Climate Control Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM DESCRIPTION

REAR CLIMATE CONTROL DOOR POSITIONS

Fig. 2: Identifying Rear Climate Control Door Positions (Heat And Vent)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR A/C LINE REPLACEMENT

- ① Front receiver line to the rear receiver line (16 x 1.5 mm): 13.2 N·m (1.4 kgf·m, 9.8 lbf·ft)
- ② Rear suction/receiver lines to rear evaporator (6 x 1.0 mm): 9.8 N·m (1.0 kgf·m, 7.2 lbf·ft)
- ③ Front suction line to rear suction line (24 x 1.5 mm): 31.9 N·m (3.3 kgf·m, 23.5 lbf·ft)

Fig. 3: Identifying Rear Suction And Receiver Lines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR HEATER LINE REPLACEMENT

Fig. 4: Identifying Rear Heater Line And Rear Outlet Heater Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR EVAPORATOR TEMPERATURE SENSOR TEST

1. Remove the rear evaporator temperature sensor (see REAR EVAPORATOR TEMPERATURE SENSOR REPLACEMENT).
2. Dip the sensor in ice water, and measure the resistance between its terminals.

REAR EVAPORATOR TEMPERATURE SENSOR

Terminal side of male terminals

Fig. 5: Identifying Terminal Side Of Male Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Then pour warm water on the sensor, and check for a change in the resistance.
4. Compare the resistance readings with the specifications shown in the graph; the resistance should be within the specifications.

Fig. 6: Resistance And Temperature Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- If the resistance is not as specified, replace the rear evaporator temperature sensor (see **REAR EVAPORATOR TEMPERATURE SENSOR REPLACEMENT**).

REAR EVAPORATOR TEMPERATURE SENSOR REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

- Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
- Disconnect the 2P connector (A) from the rear evaporator temperature sensor (B), then remove the connector clip (C). Remove the self-tapping screw and the rear evaporator temperature sensor from the rear HVAC unit.

Fig. 7: Identifying 2P Connector And Connector Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Install the sensor in the reverse order of removal.

REAR POWER TRANSISTOR TEST

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. Remove the driver's seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the driver's center console trim (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
3. Disconnect the 4P connector from the rear power transistor.
4. Measure the resistance between the No. 3 and No. 4 terminals of the rear power transistor. It should be about 1.5 kohms.
 - If the resistance is within the specifications, go to step 5.
 - If the resistance is not within the specifications, replace the rear power transistor.

NOTE: Also check the rear blower motor. Rear power transistor failure can be caused by a defective rear blower motor.

REAR POWER TRANSISTOR

Fig. 8: Identifying Rear Power Transistor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Carefully release the lock tab on the No. 1 terminal (BLU) (A) in the 4P connector, then remove the terminal and insulate it from body ground.

Fig. 9: Identifying Lock Tab On No. 1 Terminal (BLU)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Reconnect the 4P connector to the rear power transistor.
7. Make sure the BLU wire is completely isolated, then supply 12 V to the No. 1 cavity with a jumper wire.
8. Turn the ignition switch to ON (II), and check that the rear blower motor runs at high speed.
 - If the rear blower motor does not run, replace the rear power transistor.

NOTE: A faulty rear blower motor can cause the rear power transistor to fail. If the rear power transistor is replaced, also check the rear blower motor for binding, and replace it if necessary.

- If the rear blower motor runs, the rear power transistor is OK.

REAR AIR MIX CONTROL MOTOR TEST

NOTE: Before testing, check for HVAC DTCs (see GENERAL TROUBLESHOOTING INFORMATION).

1. Disconnect the 7P connector from the rear air mix control motor.

NOTE: Incorrectly applying power and ground to the rear air mix control motor will damage it. Follow the instructions carefully.

2. Connect battery power to the No. 1 terminal of the rear air mix control motor, and ground the No. 2 terminal; the rear air mix control motor should run, and stop at Max Hot. If it doesn't, reverse the connections; the rear air mix control motor should run, and stop at Max Cool. When the rear air mix control motor stops running, disconnect battery power immediately.

**Fig. 10: Identifying Rear Air Mixture Control Motor**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the rear air mix control motor did not run in step 2, remove it, then check the rear air mix control linkage and door for smooth movement.
 - If the linkage and door move smoothly, replace the rear air mix control motor (see REAR AIR MIX CONTROL MOTOR REPLACEMENT).
 - If the linkage or door sticks or binds, repair them as needed.

- If the rear air mix control motor runs smoothly, go to step 4.
- 4. Measure the resistance between the No. 5 and No. 7 terminals. It should be between 4.2 to 7.8 kohms.
- 5. Reconnect the rear air mix control motor 7P connector, then turn the ignition switch to ON (II).
- 6. Using the backprobe set, measure the voltage between the No. 3 and No. 7 terminals.

Max Cool: about 0.5 V

Max Hot: about 4.5 V

- 7. If either the resistance or voltage readings are not as specified, replace the rear air mix control motor (see **REAR AIR MIX CONTROL MOTOR REPLACEMENT**).

REAR AIR MIX CONTROL MOTOR REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Disconnect the 7P connector (A) from the rear air mix control motor (B). Remove the self-tapping screws and the rear air mix control motor from the HVAC unit.

Fig. 11: Identifying 7P Connector And Rear Air Mix Control Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal. Make sure the pin on the motor is properly engaged with the linkage. After installation, make sure the motor runs smoothly.

REAR MODE CONTROL MOTOR TEST

NOTE: Before testing, check for HVAC DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Disconnect the 7P connector from the rear mode control motor.

NOTE: **Incorrectly applying power and ground to the rear mode control motor will damage it. Follow the instructions carefully.**

2. Connect battery power to the No. 1 terminal of the rear mode control motor, and ground the No. 5 and No. 7 terminals; the rear mode control motor should run smoothly. To avoid damaging the rear mode control motor, do not reverse power and ground. Disconnect the No. 5 or No. 7 terminals from ground; the rear mode control motor should stop at Vent (when the No. 5 terminal is disconnected) or Heat (when the No. 7 terminal is disconnected). Don't cycle the rear mode control motor for a long time.

Fig. 12: Identifying Rear Mode Control Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the rear mode control motor did not run in step 2, remove it, then check the rear mode control linkage and door for smooth movement.
 - If the linkage and door move smoothly, replace the rear mode control motor (see **REAR MODE CONTROL MOTOR REPLACEMENT**).
 - If the linkage or door stick or bind, repair them as needed.

REAR MODE CONTROL MOTOR REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Disconnect the 7P connector (A) from the rear mode control motor (B). Remove the rod (C) of the rear mode control motor from the rear mode control linkage (D). Remove the self-tapping screws and the rear mode control motor from the rear HVAC unit.

Fig. 13: Identifying 7P Connector, Rear Mode Control Motor And Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal. Make sure the pin on the motor is properly engaged with the linkage. After installation, make sure the motor runs smoothly.

REAR CLIMATE CONTROL PANEL REMOVAL/INSTALLATION

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. Remove the HVAC trim (see **CENTER CONSOLE REAR TRIM REMOVAL/ INSTALLATION**).
2. Remove the self-tapping screws and the rear climate control panel (A).

Fig. 14: Identifying Rear Climate Control Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the control panel in the reverse order of removal. After installation, operate the various functions to see whether works properly.
4. Run the self-diagnostic function to confirm that there are no problems in the system (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).

REAR BLOWER MOTOR REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Disconnect the 2P connector (A) from the rear blower motor (B), then remove the wire harness clips (C). Remove the self-tapping screws and the rear blower motor from the rear HVAC unit.

Fig. 15: Identifying 2P Connector, Rear Blower Motor And Wire Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal.

REAR HEATER CORE REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. When the engine is cool, drain the engine coolant from the radiator (see **COOLANT CHECK**).
2. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
3. Slide the hose clamps (A) back, then disconnect the rear inlet heater hose (B) and the rear outlet heater hose (C) from the rear heater core. Note the orientation of the hose.

Engine coolant will run out when the hoses are disconnected; drain it into a clean drip pan. Be sure not to let coolant spill on the electrical parts or the painted surfaces. If any coolant spills, rinse it off immediately.

Fig. 16: Identifying Hose Clamps, Rear Outlet Heater Hose And Rear Inlet Heater Hose
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn over the carpet. Remove the self-tapping screws and the clamps (A). Carefully pull out the rear heater core (B) without bending lines.

Fig. 17: Identifying Rear Heater Core
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the unit in the reverse order of removal, and note these items:
 - Do not interchange the inlet and outlet heater, hoses, and install the hose clamps securely.
 - Refill the cooling system with engine coolant (see **COOLANT CHECK**).
 - Make sure that there is no coolant leakage.
 - Make sure that there is no air leakage.

REAR HVAC UNIT REMOVAL/INSTALLATION

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. When the engine is cool, drain the engine coolant from the radiator (see **COOLANT CHECK**).

2. Recover the refrigerant with a recovery/recycling/ charging station (see **REFRIGERANT RECOVERY**).
3. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
4. Slide the hose clamps (A) back, then disconnect the rear inlet heater hose (B) and the rear outlet heater hose (C) from the rear heater core. Note the orientation of the hose.

Engine coolant will run out when the hoses are disconnected; drain it into a clean drip pan. Be sure not to let coolant spill on the electrical parts or the painted surfaces. If any coolant spills, rinse it off immediately.

Fig. 18: Identifying Hose Clamps, Rear Inlet Heater Hose And Rear Outlet Heater Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Turn over the carpet. Remove the bolt, then disconnect the rear suction/receiver lines (A).

Fig. 19: Identifying Rear Suction And Receiver Lines With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the harness clips (A).

Fig. 20: Identifying Harness Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the connectors (A) from the rear mode control motor, the rear air mix control motor, rear evaporator temperature sensor, rear power transistor, and rear blower motor, then remove the harness clips (B) and connector clip (C).

Fig. 21: Identifying Harness Clips, Connector Clip And Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the mounting bolts and rear HVAC unit (A). Plug or cap the lines immediately after disconnecting them to avoid moisture and dust contamination.

Fig. 22: Identifying Mounting Bolts And Rear HVAC Unit With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the rear heater core, and the rear evaporator core in the reverse order of removal.
10. Install the unit in the reverse order of removal, and note these items:
 - Do not interchange the inlet and outlet heater hoses, and install the hose clamps securely.
 - Refill the cooling system with engine coolant (see **COOLANT CHECK**).
 - Make sure that there is no coolant leakage.
 - Make sure that there is no air leakage.
 - If you're installing a new rear evaporator, add refrigerant oil (DENSO ND-OIL 8) (see **A/C SERVICE TIPS AND PRECAUTIONS**).
 - Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.
 - Immediately after using the oil, replace the cap on the container, and seal it to avoid moisture absorption.
 - Do not spill the refrigerant oil on the vehicle; it may damage the paint; If the refrigerant oil contacts the paint, wash it off immediately.
 - Charge the system (see **SYSTEM CHARGING**).

REAR HVAC UNIT COMPONENT REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE: The rear blower motor (A), the rear heater core (B), the rear evaporator sensor (C), the rear power transistor (D), the rear air mix control motor (E), the rear mode control motor (F), and the rear expansion valve (G) can be replaced without removing the rear HVAC unit.

1. Remove the self-tapping screw and the rear evaporator sensor. Remove the self-tapping screw and the clamp (H), then remove the bolts and the rear evaporator lines (I) with the rear expansion valve. If necessary, remove the rear expansion valve. Use a second wrench to hold the other fitting on the valve so the rear evaporator lines won't twist. Leave the first fitting loosely connected so you can use it to hold the valve while you loosen the second fitting.

Fig. 23: Identifying Rear HVAC Unit Component
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If necessary, remove the rear blower motor (see [REAR BLOWER MOTOR REPLACEMENT](#)), the rear heater core (see [REAR HEATER CORE REPLACEMENT](#)), the rear power transistor, the rear air mix control motor (see [REAR AIR MIX CONTROL MOTOR TEST](#)), and the rear mode control motor (see [REAR MODE CONTROL MOTOR TEST](#)).
3. Remove the self-tapping screws, and carefully separate the left housing (J) from the right housing (K). Remove the rear evaporator core (U and plate (M).

4. Reassemble the unit in the reverse order of disassembly, and note these items;
 - Replace all O-rings with new ones at each fitting and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.
 - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
 - Make sure no air is leaking from the left upper housing and the right upper housing fitting and from the upper housings and the lower housing fitting.
 - Install the capillary tube (N) directly against the outlet line, and wrap it with electrical tape (O).
 - Before reassembly, make sure that the rear air mix control linkage and door move smoothly without binding.
 - Before reassembly, make sure that the rear mode control linkage and door move smoothly without binding.
 - After reassembly, make sure the rear air mix control motor runs smoothly (see **REAR AIR MIX CONTROL MOTOR TEST**).
 - After reassembly, make sure the rear mode control motor runs smoothly (see **REAR MODE CONTROL MOTOR TEST**).
 - Make sure that there is no coolant leakage.

A/C SERVICE TIPS AND PRECAUTIONS

WARNING:

- Compressed air mixed with the R-134a forms a combustible vapor.
- The vapor can burn or explode causing serious injury.
- Never use compressed air to pressure test R-134a service equipment or vehicle air conditioning systems.

CAUTION:

- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
- Be careful when connecting service equipment.
- Do not breathe refrigerant or vapor.

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

The air conditioning system uses HFC-134a (R-134a) refrigerant and polyalkyleneglycol (PAG) refrigerant oil, which are not compatible with CFC-12 (R-12) refrigerant and mineral oil. Do not use R-12 refrigerant or mineral oil in this system, and do not attempt to use R-12 servicing equipment; damage to the air conditioning system or your servicing equipment will result. Use only service equipment that is U.L-listed and is certified to meet the requirements of SAE J2210 to remove R-134a from the air conditioning system.

If accidental system discharge occurs, ventilate the work area before resuming service.

R-134a service equipment or vehicle air conditioning systems should not be pressure tested or leak tested with compressed air.

Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

- Always disconnect the negative cable from the battery whenever replacing air conditioning parts.
- Keep moisture and dirt out of the system. When disconnecting any lines, plug or cap the fittings immediately; don't remove the caps or plugs until just before you reconnect each line.
- Before connecting any hose or line, apply a few drops of refrigerant oil to the O-ring.
- When tightening or loosening a fitting, use a second wrench to support the matching fitting.
- When discharging the system, use an R-134a refrigerant recovery/recycling/charging station; don't release refrigerant into the atmosphere.

A/C REFRIGERANT OIL REPLACEMENT

Recommended PAG oil: DENSO ND-OIL 8

- P/N 38897-PR7-A01AH: 120 mL (4 fl.oz)
- P/N 38899-PR7-A01: 40 mL (1 1/3 fl.oz)

Add the recommended refrigerant oil in the amount listed if you replace any of the following parts.

- To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
- Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
- Do not spill the refrigerant oil on the vehicle; it may damage the paint; if it gets on the paint, wash it off immediately.

A/C condenser (including Dryer Desiccant)	50 mL (1 2/3 fl.oz)
Front Evaporator	40 mL (1 1/3 fl.oz)
Rear Evaporator	30 mL (1 fl.oz)
Line or hose	10 mL (1/3 fl.oz)
Receiver/Dryer Desiccant	10 mL (1/3 fl.oz)
Leakage repair	25 mL (5/7 fl.oz)
A/C compressor	For A/C compressor replacement, subtract the volume of oil drained from the removed A/C

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

compressor from 125 mL (4 2/9 fl.oz), and drain the calculated volume of oil from the new A/C compressor: 135 mL (4 2/9 fl.oz) - Volume of removed A/C compressor = Volume to drain from new A/C compressor.

NOTE: Even if no oil is drained from the removed A/C compressor, don't drain more than 50 mL (1 2/3 fl.oz) from the new A/C compressor.

Fig. 4: Identifying Refrigerant Oil Level
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT A/C LINE REPLACEMENT

- ① Discharge hose to the A/C compressor (6 x 1.0 mm): 9.8 N-m (1.0 kgf-m, 7.2 lbf-ft)
- ② Discharge hose to the A/C condenser (6 x 1.0 mm): 9.8 N-m (1.0 kgf-m, 7.2 lbf-ft)
- ③ Front receiver line to the A/C condenser (6 x 1.0 mm): 9.8 N-m (1.0 kgf-m, 7.2 lbf-ft)
- ④ A/C pressure sensor to the front receiver line (11 x 1.0 mm): 10.8 N-m (1.1 kgf-m, 8.0 lbf-ft)
- ⑤ Front receiver line to the front evaporator (6 x 1.0 mm): 9.8 N-m (1.0 kgf-m, 7.2 lbf-ft)
- ⑥ Front suction line to the front evaporator (6 x 1.0 mm): 9.8 N-m (1.0 kgf-m, 7.2 lbf-ft)
- ⑦ Front suction line to the suction hose (6 x 1.0 mm): 9.8 N-m (1.0 kgf-m, 7.2 lbf-ft)
- ⑧ Suction hose to the A/C compressor (6 x 1.0 mm): 9.8 N-m (1.0 kgf-m, 7.2 lbf-ft)
- ⑨ A/C compressor to the A/C compressor bracket (8 x 1.25 mm): 22 N-m (2.2 kgf-m, 16.2 lbf-ft)
- ⑩ A/C compressor to the engine block (10 x 1.25 mm): 45 N-m (4.6 kgf-m, 33.2 lbf-ft)

Fig. 5: Identifying Front A/C Line

A/C SYSTEM INSPECTION

Before troubleshooting any problem with the air conditioning system, do the following:

1. With the ignition switch in the LOCK (0), inspect the A/C components, pressure lines and hoses for stains that may indicate a refrigerant or a compressor oil leak.

Fig. 6: Identifying Compressor Oil Leak

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the condenser for material clogging the fins or for damage to the fins:
 - Carefully clean any material from the condenser fins with water and detergent.
 - Be sure to dry the condenser completely.

Fig. 7: Identifying Condenser

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the drive belt (see **DRIVE BELT INSPECTION**).
4. Make sure no material is blocking the airflow to the condenser.
5. Check the dust and pollen filter, and replace it if it is clogged (see **DUST AND POLLEN FILTER REPLACEMENT**).
6. Check the operation of the heater valve. Make sure the cable is adjusted properly (see **HEATER VALVE CABLE ADJUSTMENT**).
7. Start the engine, turn the air conditioning system on, and allow it to normalize for a few minutes.
8. Check that the A/C operates at each position of the blower fan switch (except OFF).
9. Check that the compressor clutch is engaged. The pressure plate should be rotating at the same speed as the pulley.

10. Check that the cooling fans operate when the compressor clutch is engaged.
11. Check that the engine idle speed is correctly maintained when the A/C is switched on and off when the compressor clutch is engaged and disengaged.

Fig. 8: Identifying Radiator Fan, A/C Condenser Fan And A/C Compressor

GENERAL TROUBLESHOOTING INFORMATION

HOW TO CHECK FOR DTCS WITH THE HDS

1. Make sure the ignition switch is LOCK (0).
2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 9: Connecting HDS To DLC

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the vehicle and the climate control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Select HVAC/CLIMATE CONTROL in the BODY ELECTRICAL menu.
6. Select DTCs in the HVAC/CLIMATE CONTROL menu.
7. Check for DTCs. If any DTCs are indicated, write down the DTCs, then go to the indicated DTC troubleshooting. If no DTCs are indicated, refer to symptom troubleshooting.

NOTE:

- After troubleshooting, clear the DTCs with the HDS.
- For specific operations, refer to the user's manual that came with the HDS.

HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS

1. Make sure the ignition switch is LOCK (0).
2. Connect the HDS to the data link connector (DLC).
3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the vehicle and the climate control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Select HVAC/CLIMATE CONTROL in the BODY ELECTRICAL menu.
6. Select INSPECTION in the HVAC/CLIMATE CONTROL menu.

7. Select CLIMATE CONTROL SELF TEST in the INSPECTION menu.
8. Check for DTCs. If any DTCs are indicated, write down the DTCs, then go to the indicated DTC troubleshooting.

NOTE:

- After troubleshooting, clear the DTCs with the HDS.
- For specific operations, refer to the user's manual that came with the HDS.

HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS

The climate control unit has a self-diagnostic function. To run the self-diagnostic function, do the following:

1. Turn the ignition switch to LOCK (0), and then ON (II).
2. Press and hold the OFF button, then press the RECIRCULATION CONTROL button five times within 10 seconds. Release the OFF and RECIRCULATION CONTROL buttons; then the self-diagnostic begins.

NOTE:

- The blower motor will run at various speeds regardless of what the panel is displaying.
- If there is any problem in the system, the system flashes "88 AUTO WINDSHIELD DEFROST" or alternately flashes "88 AUTO WINDSHIELD DEFROST" and one or more of the 14 segments (A through P). Refer to CHECKING FOR DTCs.
- If there are no problems detected, the segments will not illuminate, and the system will appear to be turned off.

Fig. 10: Identifying Auto Button, Driver Temperature Indicator And Rear Window Defogger
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Turn the ignition switch to LOCK (0), to cancel the self-diagnostic function. After completing the repair work, run the self-diagnostic function again to make sure that there are no other DTCs.

CHECKING FOR DTCs

The temperature display indicates single or multiple DTCs. If indicator segments A, B, C, E, G, J, M, N, AUTO, and WINDSHIELD DEFROST are on at the same time, there may be an open in the common ground wire. If no DTCs are present, the indicator remains blank.

DISPLAYING SENSOR INPUTS AT THE CLIMATE CONTROL UNIT

The climate control unit has a mode that displays sensor inputs it receives. This mode shows you what the climate control unit is receiving from each of the sensors, one at a time, and it can help you determine if a sensor is faulty.

CHECK THESE ITEMS BEFORE USING THE SENSOR INPUT DISPLAY MODE

1. Turn the ignition switch to ON (II), and check the recirculation door function; press the recirculation button to switch from FRESH to RECIRC. The air volume and sound should change slightly.
2. Set the temperature control knob to the desired test temperature. When selecting the test temperature, note these items:
 - "Lo" temperature setting will default to MAX COOL, VENT, and RECIRC.
 - "Hi" temperature setting will default to MAX HOT, FLOOR, and FRESH.
 - 58 through 86°F settings will use the automatic climate control logic.
3. Turn the ignition switch to LOCK (0).

TO RUN THE SENSOR INPUT DISPLAY MODE, FOLLOW THESE STEPS

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

1. Turn the ignition switch to LOCK (0).
2. Press and hold both the AUTO and RECIRCULATION CONTROL buttons, then start the engine.
3. After the engine starts, release both buttons. The display panel control unit will flash the sensor number and then the value for that sensor. Record the value displayed.
4. To advance to the next sensor, press the REAR WINDOW DEFOGGER button.

SENSOR DISPLAYED CHART

Sensor	Item	Displayed Value
1	In-car Temperature	°C
2	Outside Air Temperature	°C
3	Solar Radiation Sensor Value: Dark = 00, Flashlight = 04, Cloudy = 10, Sunny = 65	kcal/m ² .h
4	Front Evaporator Outlet Air Temperature	°C
5	Driver's and Passenger's Air Mix Opening (Low value indicates cooler air distribution, higher value indicates warmer air distribution)	% of opening
6	Vent Temperature Air Out (TAO)	°C
7	Vehicle Speed (Vehicle must be driven to display speed)	km/h
8	A/C Pressure	10 kPa
9	Rear Air Mix Opening	% of opening
A	Rear Vent Temperature Air Out (TAO)	°C
B	Rear Evaporator Outlet Air Temperature	°C
C	Humidity Sensor Value	%rh
D	Fog Margin	°C
E	Solar Radiation azimuth (With navigation system)	10°
F	Solar Radiation angle of elevation (With navigation system)	10°

NOTE:

- The sensor values will be displayed in degrees Celsius (°C) or an alphanumeric code. Use the chart to convert the value to degrees Fahrenheit (°F).
- If the sensor value displays "Er" this indicates there is an open or short in the circuit or sensor. Check for DTCs using the HDS, or refer to CHECKING DTCS by DTC indication.
- If necessary, compare the sensor input display to a known-good vehicle under the same test conditions.
- If the sensor is out of the normal range, refer to the sensor test or substitute a known-good sensor, and recheck.

5. To cancel the sensor input display mode, press the AUTO button or turn the ignition switch to LOCK (0).

Insufficient heating	1. Check the coolant level (see <u>COOLANT CHECK</u>) 2. Check the radiator cap (see <u>RADIATOR CAP TEST</u>) 3. Check the operation of the air mix control motor and door (see <u>DRIVER'S AIR MIX CONTROL MOTOR TEST</u>) 4. Check the coolant temperature 5. Check the operation of the heater valve (see <u>HEATER VALVE CABLE ADJUSTMENT</u>) 6. Check the blower motor unit for obstructions 7. Check for air leaks around the ducts and vents 8. Check the inlet hose temperature • If it is COLD, check for restrictions in the hose, a damaged or leaking thermostat, and a damaged or leaking water pump. • If it is HOT, check for restrictions in the heater core. Back flush the heater core using standard commercially available equipment, or replace the heater core.	Damaged cylinder head gasket

SYSTEM DESCRIPTION

The air conditioning system removes heat from the passenger compartment by transferring heat from the ambient air to the evaporator. The evaporator cools the air with the refrigerant that is circulating through the evaporator. The refrigerant expands in the evaporator, and the evaporator becomes very cold and absorbs the heat from the ambient air. The blower fan pushes air across the evaporator where the heat is absorbed, and then it blows the cool air into the passenger compartment.

Fig. 12: Climate Control System Description

Courtesy of AMERICAN HONDA MOTOR CO., INC.

This vehicle uses HFC-134a (R-134a) refrigerant, which does not contain chlorofluorocarbons. Pay attention to the following service items:

- Do not mix refrigerants CFC-12 (R-12) and HFC-134a (R-134a). They are not compatible.
- Use only the recommended polyalkyleneglycol (PAG) refrigerant oil (DENSO ND-OIL 8) designed for the R-134a A/C compressor. Intermixing the recommended (PAG) refrigerant oil with any other refrigerant oil will result in A/C compressor failure.
- All A/C system parts (A/C compressor, discharge line, suction line, evaporator, A/C condenser, receiver/dryer, expansion valve, O-rings for joints) are designed for refrigerant R-134a. Do not exchange with R-12 parts.
- Use a halogen gas leak detector designed for refrigerant R-134a.
- R-12 and R-134a refrigerant servicing equipment are not interchangeable. Use only a recovery/recycling/charging station that is U.L.-listed and is certified to meet the requirements of SAE J2210 to service the R-134a air conditioning systems.
- Always recover refrigerant R-134a with an approved recovery/recycling/charging station before disconnecting any A/C fitting.

HUMIDITY/IN-CAR TEMPERATURE SENSOR

The humidity sensor consists of two sensors. One sensor is for humidity detection, and the other is for in-car temperature detection. When the climate control unit receives signals about the in-car condition from the humidity sensor, and judges that the humidity in the vehicle is very low, the climate control unit reduces the compressor run-time. Engine power loss is kept to a minimum, and fuel economy is increased.

Fig. 13: Identifying Humidity/In-Car Temperature Sensor Component
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HUMIDITY/IN-CAR TEMPERATURE SENSOR QUALITY

The capacitance of the humidity sensor changes by the adsorption and the evaporation of moisture. The resistance change of the humidity sensor changes the output voltage.

Fig. 14: Voltage Vs Humidity Level Graph

Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/C PRESSURE SENSOR

The A/C pressure sensor converts A/C pressure into electrical signals to the PCM.

NOTE: The pressures can be monitored using the HDS PGM-FI Data List.

**Fig. 15: Identifying A/C Pressure Sensor**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

The response of the A/C pressure sensor is shown in the graph.

NOTE: When the refrigerant is below 196 kPa (2.0 kgf/cm² , 28 psi) or above 3,140 kPa (32 kgf/cm² , 455 psi), the PCM turns the compressor relay off to protect the A/C compressor.

DUAL AIR MIX CONTROL SYSTEM

Fig. 18: Identifying Dual Air Mix Control System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

I-DUAL AND I-TRI CLIMATE CONTROL SYSTEM (WITH NAVIGATION SYSTEM)

The "i-Dual" climate control system automatically controls the temperature and the vent mode of the air direction to the driver's and passenger's side, depending on the angle of the sun, and the direction of the vehicle. It calculates information such as date, time, longitude, and latitude from the navigation system, as well as the radiant strength of the sun from the sunlight sensor, to determine the appropriate mode position and temperature to be directed to each side. The "i-Tri" climate control system is an addition of the automatic controls with the temperature and the vent mode of the air direction to the rear section to the "i-Dual" climate control system.

Fig. 19: Identifying I-Dual And I-Tri Climate Control System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

In the event that the navigation system malfunctions, or when driving in areas where the navigation system cannot determine the vehicle position (non-coverage areas, tunnels, etc.), the climate control system will operate the same as a vehicle without a navigation system.

DTC TROUBLESHOOTING

DTC B1202: CLIMATE CONTROL UNIT INTERNAL ERROR

NOTE: Check the battery condition (see BATTERY TEST) and the charging system (see CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING).

1. Clear the DTC with the HDS.

2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Wait for 6 seconds or more.
4. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**).
5. Check for DTCs.

Is DTC B1202 indicated?

YES - The climate control unit is faulty, replace the climate control unit.

NO - Intermittent failure, the climate control unit is OK at this time.

DTC B1205: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (VSP/NE MESSAGE); DTC B1206 OR DTC INDICATOR AUTO: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (ECT MESSAGE); DTC B1207: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (ILLUMI MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-can diagnosis test mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Wait for 6 seconds or more.
4. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
5. Check the DTCs.

Are DTCs B1205, and/or B1206 or AUTO, and/or B1207 indicated?

YES - Go to step 6.

NO - Intermittent failure, check for loose wires or poor connections on the climate control unit connector A (40P).

6. Check for DTCs using the HDS.

Are any of the following DTCs indicated; B1011, B1060, B2160, B1357, B1805, B1408, or B2157?

YES - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Do the climate control unit troubleshooting (see **CLIMATE CONTROL UNIT**).

TROUBLESHOOTING).**DTC B1213 OR DTC INDICATOR N: AN OPEN IN THE REAR EVAPORATOR TEMPERATURE SENSOR CIRCUIT**

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1213 or N indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the rear evaporator temperature sensor circuit.

5. Turn the ignition switch to LOCK (0).
6. Remove the rear evaporator temperature sensor (see **REAR EVAPORATOR TEMPERATURE SENSOR TEST**), and test it (see **REAR EVAPORATOR TEMPERATURE SENSOR TEST**).

Is the rear evaporator temperature sensor OK?

YES - Go to step 7.

NO - Replace the rear evaporator temperature sensor.

7. Disconnect climate control unit connector B (14P).
8. Check for continuity between climate control unit connector B (14P) No. 6 terminal and the rear evaporator temperature sensor 2P connector No. 2 terminal.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

2P CONNECTOR**

Wire side of female terminals

Fig. 27: Identifying Continuity Between Climate Control Unit Connector B (14P) No. 6 And No. 2 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire between the climate control unit and the rear evaporator temperature sensor.

9. Check for continuity between climate control unit connector A (40P) No. 8 terminal and the rear evaporator temperature sensor 2P connector No. 1 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

**REAR EVAPORATOR TEMPERATURE SENSOR
2P CONNECTOR**

Wire side of female terminals

Fig. 28: Identifying Continuity Between No. 8 And Rear Evaporator Temperature Sensor 2P Connector No. 1 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector A (40P), B (14P), and at the rear evaporator temperature sensor 2P connector. If the connections are good, substitute a known-

good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Repair open in the wire between the climate control unit and the rear evaporator temperature sensor.

DTC B1214 OR DTC INDICATOR P: A SHORT IN THE REAR EVAPORATOR TEMPERATURE SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1214 or P indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Turn the ignition switch to LOCK (0).
6. Remove the rear evaporator temperature sensor (see **REAR EVAPORATOR TEMPERATURE SENSOR TEST**), and test it (see **REAR EVAPORATOR TEMPERATURE SENSOR TEST**).

Is the rear evaporator temperature sensor OK?

YES - Go to step 7.

NO - Replace the rear evaporator temperature sensor.

7. Disconnect climate control unit connector A (40P) and B(14P).
8. Check for continuity between climate control unit connector B (14P) No. 6 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 29: Identifying Continuity Between Climate Control Unit Connector B (14P) No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the rear evaporator temperature sensor.

NO - Go to step 9.

9. Check for continuity between climate control unit connector A (40P) No. 8 terminal and climate control unit connector B (14P) No. 6 terminal.

Fig. 30: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 8 And No. 6 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires between the climate control unit and the rear evaporator temperature sensor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B1215 OR DTC INDICATOR J: AN OPEN OR SHORT IN THE RECIRCULATION CONTROL MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).

4. Check for DTCs.

Is DTC B1215 or J indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the recirculation control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the recirculation control motor (see **RECIRCULATION CONTROL MOTOR TEST**).

Is the recirculation control motor OK?

YES - Go to step 7.

NO - Replace the recirculation control motor (see **RECIRCULATION CONTROL MOTOR REPLACEMENT**).

7. Disconnect the recirculation control motor 7P connector.
8. Disconnect climate control unit connector A (40P).
9. Check for continuity between the following terminals of climate control unit connector A (40P) and the recirculation control motor 7P connector.

40P: 7P:

No. 8 No. 7

No. 35 No. 5

No. 36 No. 4

No. 38 No. 3

Fig. 31: Identifying Continuity Between Climate Control Unit A (40P) And Recirculation Control Motor 7P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire(s) between the climate control unit and the recirculation control motor.

10. Check for continuity between body ground and climate control unit connector A (40P) No. 35,36, and 38 terminals individually.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 32: Identifying Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 35,36, And 38 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the recirculation control motor.

NO - Go to step 11.

11. Check for continuity between climate control unit connector A (40P) terminals as follows.

TERMINALS REFERENCE CHART

From terminal	To terminals
35	36, 38
36	38

Is there continuity between any of the terminals?

YES - Repair the short in the wires.

NO - Go to step 12.

12. Reconnect climate control unit connector A (40 P).
13. Turn the ignition switch to ON (II), and check the same terminals for voltage to body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 33: Identifying Same Terminals For Voltage To Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire(s) between the climate control unit and the recirculation control motor. This short may also damage the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Check for loose wires or poor connections at climate control unit connector A (40P) and at the recirculation control motor 7P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B1223 OR DTC INDICATOR M: A PROBLEM IN THE REAR BLOWER MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).

3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).

4. Check for DTCs.

Is DTC B1223 or M indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the rear blower motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Check the No. 2 (RR BLOWER) (30 A) fuse in the under-hood fuse box, and the No. 30 (10 A) fuse in the under-dash fuse/relay box.

Are the fuses OK?

YES - Go to step 7.

NO - Replace the fuse(s), and recheck. If fuse(s) blow again, check for a short in the No. 2 (RR BLOWER) (30 A) and No. 30 (10 A) fuse(s) circuit.

7. Connect the rear blower motor 2P connector No. 2 terminal to body ground with a jumper wire.

REAR BLOWER MOTOR 2P CONNECTOR

Wire side of female terminals

Fig. 34: Identifying Rear Blower Motor 2P Connector No. 2 Terminal To Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Turn the ignition switch to ON (II).

Does the rear blower motor run at high speed?

YES - Go to step 9.

NO - Go to step 24.

9. Turn the ignition switch to LOCK (0).

10. Disconnect the jumper wire.
11. Disconnect the rear power transistor 4P connector.
12. Check for continuity between the rear power transistor 4P connector No. 2 terminal and body ground.

REAR POWER TRANSISTOR 4P CONNECTOR

Wire side of female terminals

Fig. 35: Identifying Continuity Between Rear Power Transistor 4P Connector No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Check for an open in the wire between the rear power transistor and body ground. If the wire is OK, check for poor ground at G503 (see **GROUND TO COMPONENTS INDEX**).

13. Connect the rear power transistor 4P connector No. 2 and No. 4 terminals with a jumper wire.

REAR POWER TRANSISTOR 4P CONNECTOR

Wire side of female terminals

Fig. 36: Identifying Rear Power Transistor 4P Connector No. 2 And No. 4 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Turn the ignition switch to ON (II).

Does the rear blower motor run at high speed?

YES - Go to step 15.

NO - Repair open in the ORN wire between the rear power transistor and the rear blower motor.

15. Turn the ignition switch to LOCK (0).
16. Disconnect the jumper wire.
17. Disconnect climate control unit connector B (14P).
18. Check for continuity between body ground and climate control unit connector B (14P) No. 13 and No. 14 terminals individually.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 37: Identifying Continuity Between Body Ground And Climate Control Unit Connector B (14P) No. 13 And No. 14 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the rear power transistor.

NO - Go to step 19.

19. Check for continuity between the following terminals of climate control unit connector B (14P) and the rear power transistor 4P connector.

14P	4P
No. 13	No. 3
No. 14	No. 1

Fig. 38: Identifying Continuity Between Climate Control Unit B (14P) And Rear Power Transistor 4P Connector Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 20.

NO - Repair open in the wire(s) between the climate control unit and the rear power transistor.

20. Turn the ignition switch to ON (II).
21. Measure the voltage between body ground and climate control unit connector B (14P) No. 13 and No. 14 terminals individually.

Fig. 39: Measuring Voltage Between Body Ground And Climate Control Unit Connector B (14P) No. 13 And No. 14 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire(s).

NO - Go to step 22.

22. Reconnect climate control unit connector B (14P).

23. Test the rear power transistor (see **REAR POWER TRANSISTOR TEST**).

Is the rear power transistor OK?

YES - Check for loose wires or poor connections at climate control unit connector B (14P) and at the rear power transistor 4P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/ indication goes away, replace the original climate control unit.

NO - Replace the rear power transistor (see **REAR POWER TRANSISTOR TEST**).

24. Disconnect the jumper wire.
25. Disconnect the rear blower motor 2P connector.
26. Measure the voltage between the rear blower motor 2P connector No. 1 terminal and body ground.

REAR BLOWER MOTOR 2P CONNECTOR

Wire side of female terminals

Fig. 40: Measuring Voltage Between Rear Blower Motor 2P Connector No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the rear blower motor (see **REAR CLIMATE CONTROL PANEL REMOVAL/INSTALLATION**).

NO - Go to step 27.

27. Turn the ignition switch to LOCK (0).
28. Remove the rear blower motor relay from the dashboard wire harness, and test it (see **POWER RELAY TEST**).

Is the relay OK?

YES - Go to step 29.

NO - Replace the rear blower motor relay.

29. Measure the voltage between the rear blower motor relay 4P socket No. 1 terminal and body ground.

Wire side of female terminals

Fig. 41: Measuring Voltage Between Rear Blower Motor Relay 4P Socket No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 30.

NO - Repair open in the wire between the No. 2 (RR BLOWER) (30 A) in the under-hood fuse box and the rear blower motor relay.

30. Turn the ignition switch to ON (II).
31. Measure the voltage between the rear blower motor relay 4P socket No. 2 terminal and body ground.

REAR BLOWER MOTOR RELAY 4P SOCKET

Wire side of female terminals

Fig. 42: Measuring Voltage Between Rear Blower Motor Relay 4P Socket No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 32.

NO - Repair open in the wire between the No. 30 (10 A) fuse in the under-dash fuse/relay box and the rear blower motor relay.

32. Turn the ignition switch to LOCK (0).
33. Check for continuity between the rear blower motor relay 4P socket No. 4 terminal and body ground.

REAR BLOWER MOTOR RELAY 4P SOCKET

Wire side of female terminals

Fig. 43: Identifying Continuity Between Rear Blower Motor Relay 4P Socket No. 4 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair open in the GRY wire between the rear blower motor relay and the blower motor.

NO - Check for an open in the wire between the rear blower motor relay and body ground. If the wire is OK, check for poor ground at G503 (see **GROUND TO COMPONENTS INDEX**).

DTC B1225 OR DTC INDICATOR A AND AUTO: AN OPEN IN THE IN-CAR TEMPERATURE SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1225 or A and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the in-car temperature sensor circuit.

5. Turn the ignition switch to LOCK (0).
6. Remove the humidity/in-car temperature sensor (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT**), and test it (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR TEST**).

Is the in-car temperature sensor OK?

YES - Go to step 7.

NO - Replace the humidity/in-car temperature sensor.

7. Disconnect climate control unit connector A (40P).
8. Check for continuity between climate control unit connector A (40P) No. 5 terminal and the humidity/in-car temperature sensor 4P connector No. 4 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

HUMIDITY/IN-CAR TEMPERATURE SENSOR 4P CONNECTOR

Wire side of female terminals

Fig. 44: Identifying Continuity Between No. 5 And Humidity/In-Car Temperature Sensor 4P Connector No. 4 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire between the climate control unit and the in-car temperature sensor.

9. Check for continuity between climate control unit connector A (40P) No. 8 terminal and the humidity/in-car temperature sensor 4P connector No. 3 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

HUMIDITY/IN-CAR TEMPERATURE SENSOR 4P CONNECTOR

Wire side of female terminals

Fig. 45: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 8 And No. 3 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector A (40P) and at the humidity/in-car temperature sensor 4P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/ indication goes away, replace the original climate control unit.

NO - Repair open in the wire between the climate control unit and the in-car temperature sensor.

DTC B1226 OR DTC INDICATOR B AND AUTO: A SHORT IN THE IN-CAR TEMPERATURE SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1226 or B and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Turn the ignition switch to LOCK (0).
6. Remove the humidity/in-car temperature sensor (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT**), and test it (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR TEST**).

Is the in-car temperature sensor OK?

YES - Go to step 7.

NO - Replace the humidity/in-car temperature sensor.

7. Disconnect climate control unit connector A (40P).
8. Check for continuity between climate control unit connector A (40P) No. 5 terminal and body ground.

Fig. 46: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the in-car temperature sensor.

NO - Go to step 9.

9. Check for continuity between climate control unit connector A (40P) No. 5 and No. 8 terminals.

Fig. 47: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 5 And No. 8 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires between the climate control unit and the in-car temperature sensor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1227 or C and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the outside air temperature sensor circuit.

5. Turn the ignition switch to LOCK (0).
6. Remove the outside air temperature sensor (see **OUTSIDE AIR TEMPERATURE SENSOR REPLACEMENT**), and test it (see **OUTSIDE AIR TEMPERATURE SENSOR TEST**).

Is the outside air temperature sensor OK?

YES - Go to step 7.

NO - Replace the outside air temperature sensor.

7. Disconnect climate control unit connector A (40P).
8. Check for continuity between climate control unit connector A (40P) No. 28 terminal and the outside air temperature sensor 2P connector No. 2 terminal.

Fig. 48: Identifying Continuity Between No. 28 And Outside Air Temperature Sensor 2P Connector No. 2 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire between the climate control unit and the outside air temperature sensor.

9. Check for continuity between climate control unit connector A (40P) No. 8 terminal and the outside air temperature sensor 2P connector terminal No. 1.

Fig. 49: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 8 And Terminal No. 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector A (40P) and at the outside air temperature sensor 2P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/ indication goes away, replace the original climate control unit.

NO - Repair open in the wire between the climate control unit and the outside air temperature sensor.

DTC B1228 OR DTC INDICATOR D AND AUTO: A SHORT IN THE OUTSIDE AIR TEMPERATURE SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1228 or D and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Turn the ignition switch to LOCK (0).
6. Remove the outside air temperature sensor (see **OUTSIDE AIR TEMPERATURE SENSOR REPLACEMENT**), and test it (see **OUTSIDE AIR TEMPERATURE SENSOR TEST**).

Is the outside air temperature sensor OK?

YES - Go to step 7.

NO - Replace the outside air temperature sensor.

7. Disconnect climate control unit connector A (40P).
8. Check for continuity between climate control unit connector A (40P) No. 28 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 50: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 28 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the outside air temperature sensor.

NO - Go to step 9.

9. Check for continuity between climate control unit connector A (40P) No. 8 and No. 28 terminals.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 51: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 8 And No. 28 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires between the climate control unit and the outside air temperature sensor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B1229 OR DTC INDICATOR E AND AUTO: AN OPEN IN THE SUNLIGHT SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1229 or E and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the sunlight sensor circuit.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the sunlight sensor 5P connector.
7. Disconnect climate control unit connector A (40P).
8. Check for continuity between climate control unit connector A (40P) No. 29 terminal and the sunlight sensor 5P connector No. 4 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)
Wire side of female terminals

SUNLIGHT SENSOR 5P CONNECTOR
Wire side of female terminals

Fig. 52: Identifying Continuity Between No. 29 And Sunlight Sensor 5P Connector No. 4 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire between the climate control unit and the sunlight sensor.

9. Check for continuity between climate control unit connector A (40P) No. 8 terminal and the sunlight sensor 5P connector No. 2 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)
Wire side of female terminals

SUNLIGHT SENSOR 5P CONNECTOR
Wire side of female terminals

Fig. 53: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 8 And No. 2 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire between the climate control unit and the sunlight sensor.

10. Reconnect the sunlight sensor 5P connector.

11. Reconnect climate control unit connector A (40P).
12. Test the sunlight sensor (see **SUNLIGHT SENSOR TEST**).

Is the sunlight sensor OK?

YES - Check for loose wires or poor connections at climate control unit connector A (40P) and at the sunlight sensor 5P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Replace the sunlight sensor (see **SUNLIGHT SENSOR REPLACEMENT**).

DTC B1230 OR DTC INDICATOR F AND AUTO: A SHORT IN THE SUNLIGHT SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1230 or F and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the sunlight sensor 5P connector.
7. Disconnect climate control unit connector A (40P).
8. Check for continuity between climate control unit connector A (40P) No. 29 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 54: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 29 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the sunlight sensor.

NO - Go to step 9.

9. Check for continuity between climate control unit connector A (40P) No. 8 and No. 29 terminals.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 55: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 8 And No. 29 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires between the climate control unit and the sunlight sensor.

NO - Go to step 10.

10. Reconnect the sunlight sensor 5P connector.
11. Reconnect climate control unit connector A (40P).
12. Test the sunlight sensor (see **SUNLIGHT SENSOR TEST**).

Is the sunlight sensor OK?

YES - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Replace the sunlight sensor (see **SUNLIGHT SENSOR REPLACEMENT**).

DTC B1231 OR DTC INDICATOR G AND AUTO: AN OPEN IN THE FRONT EVAPORATOR TEMPERATURE SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION**).

WITH THE HDS) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).

4. Check for DTCs.

Is DTC B1231 or G and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the front evaporator temperature sensor circuit.

5. Turn the ignition switch to LOCK (0).
6. Remove the front evaporator temperature sensor (see **FRONT EVAPORATOR TEMPERATURE SENSOR REPLACEMENT**), and test it (see **FRONT EVAPORATOR TEMPERATURE SENSOR TEST**).

Is the front evaporator temperature sensor OK?

YES - Go to step 7.

NO - Replace the front evaporator temperature sensor.

7. Disconnect climate control unit connector A (40P).
8. Check for continuity between climate control unit connector A (40P) No. 24 terminal and the front evaporator temperature sensor 2P connector No. 2 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)
Wire side of female terminals

**FRONT EVAPORATOR TEMPERATURE SENSOR
2P CONNECTOR**
Wire side of female terminals

Fig. 56: Identifying Continuity Between No. 24 And Front Evaporator Temperature Sensor 2P Connector No. 2 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire between the climate control unit and the front evaporator temperature sensor.

9. Check for continuity between climate control unit connector A (40P) No. 8 terminal and the front evaporator temperature sensor 2P connector No. 1 terminal.

Fig. 57: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 8 And No. 1 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector A (40P) and at the front evaporator temperature sensor 2P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Repair open in the wire between the climate control unit and the front evaporator temperature sensor.

DTC B1232 OR DTC INDICATOR H AND AUTO: A SHORT IN THE FRONT EVAPORATOR TEMPERATURE SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1232 or H and AUTO indicated?

YES - Go to step 5

NO - Intermittent failure.

5. Turn the ignition switch to LOCK (0).
6. Remove the front evaporator temperature sensor (see **FRONT EVAPORATOR TEMPERATURE SENSOR REPLACEMENT**), and test it (see **FRONT EVAPORATOR TEMPERATURE SENSOR TEST**).

Is the front evaporator temperature sensor OK?

YES - Go to step 7.

NO - Replace the front evaporator temperature sensor.

7. Disconnect climate control unit connector A (40P).
8. Check for continuity between climate control unit connector A (40P) No. 24 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 58: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 24 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the front evaporator temperature sensor.

NO - Go to step 9.

9. Check for continuity between climate control unit connector A (40P) No. 8 and No. 24 terminals.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 59: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 8 And No. 24 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires between the climate control unit and the front evaporator temperature sensor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B1233 OR DTC INDICATOR J AND AUTO: AN OPEN IN THE DRIVER'S AIR MIX CONTROL MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1233 or J and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the driver's air mix control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the driver's air mix control motor (see **DRIVER'S AIR MIX CONTROL MOTOR TEST**).

Is the driver's air mix control motor OK?

YES - Go to step 7.

NO - Replace the driver's air mix control motor (see **DRIVER'S AIR MIX CONTROL MOTOR REPLACEMENT**).

7. Disconnect the driver's air mix control motor 7P connector.
8. Disconnect climate control unit connector A (40P).
9. Check for continuity between the following terminals of climate control unit connector A (40P) and the driver's air mix control motor 7P connector.

40P	7P
No. 6	No. 7
No. 8	No. 5
No. 11	No. 3

Fig. 60: Identifying Continuity Between Climate Control Unit A (40P) And Driver's Air Mix Control Motor 7P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector A (40P) and at the driver's air mix control motor 7P connector. If the connections are good, substitute a known-good climate control unit and recheck. If the symptom/ indication goes away, replace the original climate control unit.

NO - Repair open in the wire(s) between the climate control unit and the driver's air mix control motor.

DTC B1234 OR DTC INDICATOR K AND AUTO: A SHORT IN THE DRIVER'S AIR MIX CONTROL MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).

3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).

4. Check for DTCs.

Is DTC B1234 or K and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Check for DTCs.

Are these DTCs also present; B1237 or N and AUTO, and/or B1245 or G, and/or B2968 or A and WINDSHIELD DEFROST, and/or B2980 or B and WINDSHIELD DEFROST?

YES - Go to step 13.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Test the driver's air mix control motor (see **DRIVER'S AIR MIX CONTROL MOTOR TEST**).

Is the driver's air mix control motor OK?

YES - Go to step 8.

NO - Replace the driver's air mix control motor (see **DRIVER'S AIR MIX CONTROL MOTOR REPLACEMENT**).

8. Disconnect the driver's air mix control motor 7P connector.
9. Disconnect climate control unit connector A (40P).
10. Check for continuity between body ground and climate control unit connector A (40P) No. 11 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 61: Identifying Continuity Between Body Ground And Climate Control Unit Connector A

(40P) No. 11 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the driver's air mix control motor.

NO - Go to step 11.

11. Check for continuity between climate control unit connector A (40P) No. 6 and No. 11 terminals.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 62: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 And No. 11 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair the short in the wires.

NO - Go to step 12.

12. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector A (40P) No. 11 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 63: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 11 Terminal And

Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire between the climate control unit and the driver's air mix control motor. This short may also damage the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

13. Turn the ignition switch to LOCK (0), and disconnect the climate control unit.
14. Disconnect these items:
 - Driver's air mix control motor
 - Passenger's air mix control motor
 - Rear air mix control motor
 - Humidity/in-car temperature sensor
 - A/C pressure sensor
15. Check for continuity between climate control unit connector A (40P) No. 6 terminal and body ground.

Fig. 64: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire.

NO - Go to step 16.

16. Turn the ignition switch to ON (II), and check the same terminal for voltage to body ground.

Fig. 65: Identifying Same Terminal For Voltage To Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire. This short may have also damaged the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Go to step 17.

17. Turn the ignition switch to LOCK (0).
18. Reconnect the climate control unit connector (40P).
19. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector A (40P) No. 6 terminal and body ground.

Fig. 66: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 20.

NO - Check for a loose wire or poor connection at climate control unit connector A (40P). If the connection is good, substitute a known-good climate control unit and recheck. If the symptom/ indication goes away, replace the original climate control unit.

20. While checking the same terminal for voltage to ground, reconnect these items individually and note the voltage reading each time:

- Driver's air mix control motor
- Passenger's air mix control motor
- Rear air mix control motor
- Humidity/in-car temperature sensor
- A/C pressure sensor

Fig. 67: Identifying Climate Control Unit Connector A (40P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage remain at about 5 V?

YES - Substitute a known-good climate control unit and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Replace the component that caused the voltage drop.

DTC B1235 OR DTC INDICATOR L AND AUTO: A PROBLEM IN THE DRIVER'S AIR MIX CONTROL LINKAGE, DOOR, OR MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1235 or L and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the driver's air mix control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the driver's air mix control motor (see **DRIVER'S AIR MIX CONTROL MOTOR TEST**).

Is the driver's air mix control motor OK?

YES - Go to step 7.

NO - Replace the driver's air mix control motor (see **DRIVER'S AIR MIX CONTROL MOTOR REPLACEMENT**), or repair the driver's air mix control linkage or door.

7. Disconnect the driver's air mix control motor 7P connector.
8. Disconnect climate control unit connector A (40P).
9. Check for continuity between the following terminals of climate control unit connector A (40P) and the driver's air mix control motor 7P connector.

40P	7P
No. 12	No. 2
No. 13	No. 1

Fig. 68: Identifying Continuity Between Climate Control Unit A (40P) And Driver's Air Mix Control Motor 7P Connector Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire(s) between the climate control unit and the driver's air mix control motor.

10. Check for continuity between body ground and climate control unit connector A (40P) No. 12 and No. 13 terminals individually.

Fig. 69: Identifying Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 12 And No. 13 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the driver's air mix control motor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B1236 OR DTC INDICATOR M AND AUTO: AN OPEN IN THE PASSENGER'S AIR MIX CONTROL MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).

4. Check for DTCs.

Is DTC B1236 or M and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the passenger's air mix control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the passenger's air mix control motor (see **PASSENGER'S AIR MIX CONTROL MOTOR TEST**).

Is the passenger's air mix control motor OK?

YES - Go to step 7.

NO - Replace the passenger's air mix control motor (see **PASSENGER'S AIR MIX CONTROL MOTOR REPLACEMENT**).

7. Disconnect the passenger's air mix control motor 7P connector.
8. Disconnect climate control unit connector A (40P).
9. Check for continuity between the following terminals of climate control unit connector A (40P) and the passenger's air mix control motor 7P connector.

40P	7P
No. 6	No. 7
No. 8	No. 5
No. 30	No. 3

Fig. 70: Identifying Continuity Between Climate Control Unit A (40P) And Passenger's Air Mix Control Motor 7P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector A (40P) and at the passenger's air mix control motor 7P connector. If the connections are good, substitute a known-good climate control unit and recheck. If the symptom/ indication goes away, replace the original climate control unit.

NO - Repair open in the wire(s) between the climate control unit and the passenger's air mix control motor.

CONTROL MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1237 or N and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Check for DTCs.

Are these DTCs also present; B1234 or K and AUTO, and/or B1245 or G, and/or B2968 or A and WINDSHIELD DEFROST, and/or B2980 or B and WINDSHIELD DEFROST?

YES - Go to step 13.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Test the passenger's air mix control motor (see **PASSENGER'S AIR MIX CONTROL MOTOR TEST**).

Is the passenger's air mix control motor OK?

YES - Go to step 8.

NO - Replace the passenger's air mix control motor (see **PASSENGER'S AIR MIX CONTROL MOTOR REPLACEMENT**).

8. Disconnect the passenger's air mix control motor 7P connector.
9. Disconnect climate control unit connector A (40P).
10. Check for continuity between body ground and climate control unit connector A (40P) No. 30 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 71: Identifying Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 30 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the passenger's air mix control motor.

NO - Go to step 11.

11. Check for continuity between climate control unit connector A (40P) No. 6 and No. 30 terminals.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 72: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 And No. 30 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair the short in the wires.

NO - Go to step 12.

12. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector A (40P) No. 30 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 73: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 30 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire(s) between the climate control unit and the passenger's air mix control motor. This short may also damage the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

13. Turn the ignition switch to LOCK (0), and disconnect the climate control unit.
14. Disconnect these items:
 - Driver's air mix control motor
 - Passenger's air mix control motor
 - Rear air mix control motor
 - Humidity/in-car temperature sensor
 - A/C pressure sensor
15. Check for continuity between climate control unit connector A (40P) No. 6 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 74: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire.

NO - Go to step 16.

16. Turn the ignition switch to ON (II), and check the same terminal for voltage to body ground.

Fig. 75: Identifying Same Terminal For Voltage To Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire. This short may have also damaged the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Go to step 17.

17. Turn the ignition switch to LOCK (0).
18. Reconnect the climate control unit connector (40P).
19. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector A (40P) No. 6 terminal and body ground.

Fig. 76: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 20.

NO - Check for a loose wire or poor connection at climate control unit connector A (40P). If the connection is good, substitute a known-good climate control unit and recheck. If the symptom/ indication goes away, replace the original climate control unit.

20. While checking the same terminal for voltage to ground, reconnect these items individually and note the voltage reading each time:
- Driver's air mix control motor
 - Passenger's air mix control motor
 - Rear air mix control motor
 - Humidity/in-car temperature sensor
 - A/C pressure sensor

Fig. 77: Identifying Same Terminal For Voltage To Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage remain at about 5 V?

YES - Substitute a known-good climate control unit and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Replace the component that caused the voltage drop.

DTC B1238 OR DTC INDICATOR P AND AUTO: A PROBLEM IN THE PASSENGER'S AIR MIX CONTROL LINKAGE, DOOR, OR MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).

4. Check for DTCs.

Is DTC B1238 or P and AUTO indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the passenger's air mix control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the passenger's air mix control motor (see **PASSENGER'S AIR MIX CONTROL MOTOR TEST**).

Is the passenger's air mix control motor OK?

YES - Go to step 7.

NO - Replace the passenger's air mix control motor (see **PASSENGER'S AIR MIX CONTROL MOTOR REPLACEMENT**), or repair the passenger's air mix control linkage or door.

7. Disconnect the passenger's air mix control motor 7P connector.
8. Disconnect climate control unit connector A (40P).
9. Check for continuity between the following terminals of climate control unit connector A (40P) and the passenger's air mix control motor 7P connector.

40P	7P
No. 14	No. 2
No. 15	No. 1

Fig. 78: Identifying Continuity Between Climate Control Unit A (40P) And Passenger's Air Mix Control Motor 7P Connector Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire(s) between the climate control unit and the passenger's air mix control motor.

10. Check for continuity between body ground and climate control unit connector A (40P) No. 14 and No. 15 terminals individually.

Fig. 79: Identifying Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 14 And No. 15 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the passenger's air mix control motor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B1239 OR DTC INDICATOR A: AN OPEN OR SHORT IN THE FRONT MODE CONTROL MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1239 or A indicated?

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the front mode control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the front mode control motor (see **FRONT MODE CONTROL MOTOR TEST**).

Is the front mode control motor OK?

YES - Go to step 7.

NO - Replace the front mode control motor (see **FRONT MODE CONTROL MOTOR REPLACEMENT**).

7. Disconnect the front mode control motor 7P connector.
8. Disconnect climate control unit connector A (40P).
9. Check for continuity between the following terminals of climate control unit connector A (40P) and the front mode control motor 7P connector.

40P	7P
No. 8	No. 7
No. 31	No. 6
No. 32	No. 5
No. 33	No. 4
No. 34	No. 3

CLIMATE CONTROL UNIT CONNECTOR A (40P)
Wire side of female terminals

FRONT MODE CONTROL MOTOR 7P CONNECTOR
Wire side of female terminals

Fig. 80: Identifying Continuity Between Climate Control Unit A (40P) And Front Mode Control Motor 7P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire(s) between the climate control unit and the front mode control motor.

10. Check for continuity between body ground and climate control unit connector A (40P) No. 31,32, 33, and 34 terminals individually.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 81: Identifying Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 31,32, 33, And 34 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the front mode control motor.

NO - Go to step 11.

11. Check for continuity between climate control unit connector A (40P) terminals as follows.

TERMINALS REFERENCE CHART

From terminal	To terminals
31	32, 33, 34
32	33, 34
33	34

Is there continuity between any of the terminals?

YES - Repair the short in the wires.

NO - Go to step 12.

12. Turn the ignition switch to ON (II), and check the same terminals for voltage to body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 82: Identifying Same Terminals For Voltage To Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire(s) between the climate control unit and the front mode control motor. This short may also damage the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Check for loose wires or poor connections at climate control unit connector A (40P) and at the front mode control motor 7P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/ indication goes away, replace the original climate control unit.

DTC B1240 OR DTC INDICATOR B: A PROBLEM IN THE FRONT MODE CONTROL LINKAGE, DOORS, OR MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1240 or B indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the mode control motor circuit.

5. Turn the ignition switch to LOCK (0).

6. Test the front mode control motor (see **FRONT MODE CONTROL MOTOR TEST**).

Is the front mode control motor OK?

YES - Go to step 7.

NO - Replace the front mode control motor (see **FRONT MODE CONTROL MOTOR REPLACEMENT**), or repair the front mode control linkage or doors.

7. Disconnect the front mode control motor 7P connector.
 8. Disconnect climate control unit connector A (40P).
 9. Check for continuity between the following terminals of climate control unit connector A (40P) and the front mode control motor 7P connector.

40P	7P
No. 16	No. 2
No. 17	No. 1

Fig. 83: Identifying Continuity Between Climate Control Unit A (40P) And Front Mode Control Motor 7P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire(s) between the climate control unit and the front mode control motor.

10. Check for continuity between body ground and climate control unit connector A (40P) No. 16 and No. 17 terminals individually.

Fig. 84: Identifying Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 16 And No. 17 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the front mode control motor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B1241 OR DTC INDICATOR C: A PROBLEM IN THE FRONT BLOWER MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1241 or C indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the front blower motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Check the No. 12 (40 A) fuse in the relay block, and the No. 30 (10 A) fuse in the under-dash fuse/relay box.

Are the fuses OK?

YES - Go to step 7.

NO - Replace the fuse(s), and recheck. If fuse(s) blow again, check for a short in the No. 12 (40 A) and

No. 30 (10 A) fuse(s) circuit.

7. Connect the front blower motor 2P connector No. 2 terminal to body ground with a jumper wire.

FRONT BLOWER MOTOR 2P CONNECTOR

Wire side of female terminals

Fig. 85: Identifying Front Blower Motor 2P Connector No. 2 Terminal To Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Turn the ignition switch to ON (II).

Does the front blower motor run at high speed?

YES - Go to step 9.

NO - Go to step 24.

9. Turn the ignition switch to LOCK (0).
10. Disconnect the jumper wire.
11. Disconnect the front power transistor 4P connector.
12. Check for continuity between the front power transistor 4P connector No. 2 terminal and body ground.

FRONT POWER TRANSISTOR 4P CONNECTOR

Wire side of female terminals

Fig. 86: Identifying Continuity Between Front Power Transistor 4P Connector No. 2 Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

NO - Check for an open in the wire between the front power transistor and body ground. If the wire is OK, check for poor ground at G507 (see **GROUND TO COMPONENTS INDEX**).

13. Connect the front power transistor 4P connector No. 2 and No. 4 terminals with a jumper wire.

FRONT POWER TRANSISTOR 4P CONNECTOR

Wire side of female terminals

Fig. 87: Identifying Front Power Transistor 4P Connector No. 2 And No. 4 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Turn the ignition switch to ON (II).

Does the front blower motor run at high speed?

YES - Go to step 15.

NO - Repair open in the GRN wire between the front power transistor and the front blower motor.

15. Turn the ignition switch to LOCK (0).
16. Disconnect the jumper wire.
17. Disconnect climate control unit connector A (40P).
18. Check for continuity between body ground and climate control unit connector A (40P) No. 9 and No. 10 terminals individually.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 88: Identifying Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 9 And No. 10 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the front power transistor.

NO - Go to step 19.

19. Check for continuity between the following terminals of climate control unit connector A (40P) and the front power transistor 4P connector.

40P: 4P:

No. 9 No. 3

No. 10 No. 1

Fig. 89: Identifying Continuity Between Climate Control Unit A (40P) And Front Power Transistor 4P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 20.

NO - Repair open in the wire(s) between the climate control unit and the front power transistor.

20. Turn the ignition switch to ON (II).
21. Measure the voltage between body ground and climate control unit connector A (40P) No. 9 and No. 10 terminals individually.

Fig. 90: Measuring Voltage Between Body Ground And Climate Control Unit Connector A (40P) No. 9 And No. 10 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire(s).

NO - Go to step 22.

22. Reconnect climate control unit connector A (40P).
23. Test the front power transistor (see **FRONT POWER TRANSISTOR TEST**).

Is the front power transistor OK?

YES - Check for loose wires or poor connections at climate control unit connector A (40P) and at the front power transistor 4P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/ indication goes away, replace the original climate control unit.

NO - Replace the front power transistor (see **FRONT POWER TRANSISTOR TEST**).

24. Disconnect the jumper wire.
25. Disconnect the front blower motor 2P connector.
26. Measure the voltage between the front blower motor 2P connector No. 1 terminal and body ground.

Fig. 91: Measuring Voltage Between Front Blower Motor 2P Connector No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the front blower motor (see **BLOWER UNIT COMPONENT REPLACEMENT**).

NO - Go to step 27.

27. Turn the ignition switch to LOCK (0).

28. Remove the front blower motor relay from the relay block, and test it (see **POWER RELAY TEST**).

Is the relay OK?

YES - Go to step 29.

NO - Replace the front blower motor relay.

29. Measure the voltage between the front blower motor relay 4P socket No. 1 terminal and body ground.

FRONT BLOWER MOTOR RELAY 4P SOCKET

Fig. 92: Measuring Voltage Between Front Blower Motor Relay 4P Socket No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 30.

NO - Replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

30. Turn the ignition switch to ON (II).

31. Measure the voltage between the front blower motor relay 4P socket No. 4 terminal and body ground.

FRONT BLOWER MOTOR RELAY 4P SOCKET

Fig. 93: Measuring Voltage Between Front Blower Motor Relay 4P Socket No. 4 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 32.

NO - Repair open in the wire between the No. 30 (10 A) fuse in the under-dash fuse/relay box and the front blower motor relay.

32. Turn the ignition switch to LOCK (0).
33. Check for continuity between the front blower motor relay 4P socket No. 3 terminal and body ground.

FRONT BLOWER MOTOR RELAY 4P SOCKET

Fig. 94: Identifying Continuity Between Front Blower Motor Relay 4P Socket No. 3 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair open in the WHT wire between the front blower motor relay and the blower motor.

NO - Check for an open in the wire between the front blower motor relay and body ground. If the wire is OK, check for poor ground at G202 (see **GROUND TO COMPONENTS INDEX**).

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1244 or F indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the rear air mix control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the rear air mix control motor (see **REAR AIR MIX CONTROL MOTOR TEST**).

Is the rear air mix control motor OK?

YES - Go to step 7.

NO - Replace the rear air mix control motor (see **REAR AIR MIX CONTROL MOTOR TEST**).

7. Disconnect the rear air mix control motor 7P connector.
8. Disconnect climate control unit connector A (40P) and B (14P).
9. Check for continuity between the following terminals of climate control unit connector A (40P), B (14P), and the rear air mix control motor 7P connector.

40P	7P
No. 6	No. 5
No. 8	No. 7
14P	7P
No. 5	No. 3

Fig. 95: Identifying Continuity Between Climate Control Unit A (40P), B (14P), And Rear Air Mix Control Motor 7P Connector Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector A (40P), B (14P), and at the rear air mix control motor 7P connector. If the connections are good, substitute a known-good climate control unit and recheck. If the symptom/ indication goes away, replace the original climate control unit.

NO - Repair open in the wire(s) between the climate control unit and the rear air mix control motor.

DTC B1245 OR DTC INDICATOR G: A SHORT IN THE REAR AIR MIX CONTROL MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1245 or G indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Check for DTCs.

Are these DTCs also present; B1234 or K and AUTO, and/or B1237 or N and AUTO, and/or B2968 or A and WINDSHIELD DEFROST, and/or B2980 or B and WINDSHIELD DEFROST?

YES - Go to step 13.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Test the rear air mix control motor (see **REAR AIR MIX CONTROL MOTOR TEST**).

Is the rear air mix control motor OK?

YES - Go to step 8.

NO - Replace the rear air mix control motor (see **REAR AIR MIX CONTROL MOTOR TEST**).

8. Disconnect the rear air mix control motor 7P connector.
9. Disconnect climate control unit connector A (40P) and B (HP).
10. Check for continuity between climate control unit connector B (14P) No. 5 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 96: Identifying Continuity Between Climate Control Unit Connector B (14P) No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the rear air mix control motor.

NO - Go to step 11.

11. Check for continuity between climate control unit connector A (40P) No. 6 terminal and climate control

unit connector B (14P) No. 5 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 97: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 And No. 5 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair the short in the wires.

NO - Go to step 12.

12. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector B (14P) No. 5 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 98: Measuring Voltage Between Climate Control Unit Connector B (14P) No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire between the climate control unit and the rear air mix control motor. This short may also damage the climate control unit. Repair the short to power before replacing

the climate control unit.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

13. Turn the ignition switch to LOCK (0), and disconnect climate control unit connector A (40P).
14. Disconnect these items:
 - Driver's air mix control motor
 - Passenger's air mix control motor
 - Rear air mix control motor
 - Humidity/in-car temperature sensor
 - A/C pressure sensor
15. Check for continuity between climate control unit connector A (40P) No. 6 terminal and body ground.

Fig. 99: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire.

NO - Go to step 16.

16. Turn the ignition switch to ON (II), and check the same terminal for voltage to body ground.

Fig. 100: Identifying Same Terminal For Voltage To Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire. This short may have also damaged the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Go to step 17.

17. Turn the ignition switch to LOCK (0).
18. Reconnect the climate control unit connector (40P).
19. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector A (40P) No. 6 terminal and body ground.

Fig. 101: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 20.

NO - Check for a loose wire or poor connection at climate control unit connector A (40P). If the connection is good, substitute a known-good climate control unit and recheck. If the symptom/ indication goes away, replace the original climate control unit.

20. While checking the same terminal for voltage to ground, reconnect these items individually and note the voltage reading each time:

- Driver's air mix control motor
- Passenger's air mix control motor
- Rear air mix control motor
- Humidity/in-car temperature sensor
- A/C pressure sensor

Fig. 102: Identifying Climate Control Unit Connector A (40P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage remain at about 5 V?

YES - Substitute a known-good climate control unit and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Replace the component that caused the voltage drop.

DTC B1246 OR DTC INDICATOR H: A PROBLEM IN THE REAR AIR MIX CONTROL LINKAGE, DOOR, OR MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B1246 or H indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the rear air mix control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the rear air mix control motor (see **REAR AIR MIX CONTROL MOTOR TEST**).

Is the rear air mix control motor OK?

YES - Go to step 7.

NO - Replace the rear air mix control motor (see **REAR AIR MIX CONTROL MOTOR TEST**), or repair the rear air mix control linkage or door.

7. Disconnect the rear air mix control motor 7P connector.
8. Disconnect climate control unit connector B (14P).
9. Check for continuity between the following terminals of climate control unit connector B (14P) and the rear air mix control motor 7P connector.

14P	7P
No. 1	No. 2
No. 2	No. 1

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

REAR AIR MIX CONTROL MOTOR 7P CONNECTOR

Wire side of female terminals

Fig. 103: Identifying Continuity Between Climate Control Unit B (14P) And Rear Air Mix Control Motor 7P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire(s) between the climate control unit and the rear air mix control motor.

10. Check for continuity between body ground and climate control unit connector B (14P) No. 1 and No. 2 terminals individually.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 104: Identifying Continuity Between Body Ground And Climate Control Unit Connector B (14P) No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the rear air mix control motor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B2965: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH REAR CLIMATE CONTROL PANEL

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**).
4. Check for DTCs.

Is DTC B2965 indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the rear climate control panel and climate control unit circuit.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the rear climate panel 10P connector.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between the rear climate control panel 10P connector No. 1 terminal and body ground.

REAR CLIMATE CONTROL PANEL 10P CONNECTOR

Wire side of female terminals

Fig. 105: Measuring Voltage Between Rear Climate Control Panel 10P Connector No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 9.

NO - Repair open in the wire between the No. 30 (10 A) fuse in the under-dash fuse/relay box and the rear climate control panel.

9. Turn the ignition switch to LOCK (0).
10. Check for continuity between the rear climate control panel 10P connector No. 3 terminal and body ground.

REAR CLIMATE CONTROL PANEL 10P CONNECTOR

Wire side of female terminals

Fig. 106: Identifying Continuity Between Rear Climate Control Panel 10P Connector No. 3 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Check for an open in the wire between the rear climate control panel and body ground. If the wire is OK, check for poor ground at G506 (see **GROUND TO COMPONENTS INDEX**).

11. Disconnect climate control unit connector B (14P).
12. Check for continuity between the following terminals of climate control unit connector B (14P) and the rear climate control panel 10P connector.

14P	10P
No. 11	No. 10
No. 12	No. 9

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

REAR CLIMATE CONTROL PANEL 10P CONNECTOR

Wire side of female terminals

Fig. 107: Identifying Continuity Between Climate Control Unit B (14P) And Rear Climate Control Panel 10P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire(s) between the climate control unit and the rear climate control panel.

13. Check for continuity between body ground and climate control unit connector B (14P) No. 11 and No. 12 terminals individually.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 108: Identifying Continuity Between Body Ground And Climate Control Unit Connector B

(14P) No. 11 And No. 12 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Repair short to body ground in the wire(s) between the climate control unit and the rear climate control panel.**NO** - Go to step 14.

14. Check for continuity between climate control unit connector B (14P) No. 11 and No. 12 terminals.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 109: Identifying Continuity Between Climate Control Unit Connector B (14P) No. 11 And No. 12 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Repair short in the wires between the climate control unit and the rear climate control panel.**NO** - Substitute a known-good rear climate control panel, and recheck. If the symptom/indication goes away, replace the original rear climate control panel.**DTC B2967 OR DTC INDICATOR A AND WINDSHIELD DEFROST: AN OPEN IN THE HUMIDITY SENSOR CIRCUIT**

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

*Is DTC B2967 or A and WINDSHIELD DEFROST indicated?***YES** - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the humidity sensor circuit.

5. Turn the ignition switch to LOCK (0).
6. Remove the humidity/in-car temperature sensor (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT**), and test it (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR TEST**).

Is the humidity sensor OK?

YES - Go to step 7.

NO - Replace the humidity/in-car temperature sensor.

7. Disconnect the humidity/in-car temperature sensor 4P connector.
8. Disconnect climate control unit connector A (40P).
9. Check for continuity between the following terminals of climate control unit connector A (40P) and the humidity/in-car temperature sensor 4P connector.

40P	4P
No. 6	No. 1
No. 8	No. 3
No. 27	No. 2

Fig. 110: Identifying Continuity Between Climate Control Unit A (40P) And Humidity/In-Car Temperature Sensor 4P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector A (40P) and at the humidity/in-car temperature sensor 4P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/ indication goes away, replace the original climate

control unit.

NO - Repair open in the wire(s) between the climate control unit and the humidity sensor.

DTC B2968 OR DTC INDICATOR A AND WINDSHIELD DEFROST: A SHORT IN THE HUMIDITY SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B2968 or A and WINDSHIELD DEFROST indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Check for DTCs.

Are these DTCs also present; B1234 or K and AUTO, and/or B1237 or N and AUTO, and/or B1245 or G, and/or B2980 or B and WINDSHIELD DEFROST?

YES - Go to step 13.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Remove the humidity/in-car temperature sensor (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT**), and test it (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR TEST**).

Is the humidity sensor OK?

YES - Go to step 8.

NO - Replace the humidity/in-car temperature sensor.

8. Disconnect the humidity/in-car temperature sensor 4P connector.
9. Disconnect climate control unit connector A (40P).
10. Check for continuity between body ground and climate control unit connector A (40P) No. 27 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 111: Checking Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 27 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the humidity sensor.

NO - Go to step 11.

11. Check for continuity between climate control unit connector A (40P) No. 6 and No. 27 terminals.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 112: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 And No. 27 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair the short in the wires.

NO - Go to step 12.

12. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector A (40P) No. 27 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 113: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 27 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire between the climate control unit and the humidity sensor. This short may also damage the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

13. Turn the ignition switch to LOCK (0), and disconnect climate control unit connector A (40P).
14. Disconnect these items:
 - Driver's air mix control motor
 - Passenger's air mix control motor
 - Rear air mix control motor
 - Humidity/in-car temperature sensor
 - A/C pressure sensor
15. Check for continuity between climate control unit connector A (40P) No. 6 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 114: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire.

NO - Go to step 16.

16. Turn the ignition switch to ON (II), and check the same terminal for voltage to body ground.

Fig. 115: Identifying Same Terminal For Voltage To Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire. This short may have also damaged the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Go to step 17.

17. Turn the ignition switch to LOCK (0).
18. Reconnect the climate control unit connector (40P).
19. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector A (40P) No. 6 terminal and body ground.

Fig. 116: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 20.

NO - Check for a loose wire or poor connection at climate control unit connector A (40P). If the connection is good, substitute a known-good climate control unit and recheck. If the symptom/ indication goes away, replace the original climate control unit.

20. While checking the same terminal for voltage to ground, reconnect these items individually and note the voltage reading each time:
- Driver's air mix control motor
 - Passenger's air mix control motor
 - Rear air mix control motor
 - Humidity/in-car temperature sensor
 - A/C pressure sensor

Fig. 117: Identifying Climate Control Unit Connector A (40P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage remain at about 5 V?

YES - Substitute a known-good climate control unit and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Replace the component that caused the voltage drop.

DTC B2969: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH COMBINATION SWITCH CONTROL UNIT (WIPSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in the B-can system diagnosis test mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).

3. Wait for 6 seconds or more.
4. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**).
5. Check the DTCs.

Is DTC B2969 indicated?

YES - Go to step 6.

NO - Intermittent failure, check for loose wire or poor connection on the climate control unit connector A (40P).

6. Check for DTCs with the HDS.

Are any of the following DTCs indicated; B1958, B1063, or B1156 indicated?

YES - Do the wiper/washer switch (combination switch control unit) input test (see **WIPER/WASHER SWITCH (COMBINATION SWITCH CONTROL UNIT) INPUT TEST**).

NO - Do the climate control unit troubleshooting (see **CLIMATE CONTROL UNIT TROUBLESHOOTING**).

DTC B2970: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH RELAY CONTROL MODULE (RM MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in the B-can system diagnosis test mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Wait for 6 seconds or more.
4. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**).
5. Check the DTCs.

Is DTC B2970 indicated?

YES - Go to step 6.

NO - Intermittent failure, check for loose wire or poor connection on the climate control unit connector A (40P).

6. Check for DTCs with the HDS.

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

Are any of the following DTCs indicated; B1005, B1959, B2162 or B1158 indicated?

YES - Do the relay control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Do the climate control unit troubleshooting (see **CLIMATE CONTROL UNIT TROUBLESHOOTING**).

DTC B2979 OR DTC INDICATOR B AND WINDSHIELD DEFROST: AN OPEN IN THE A/C PRESSURE SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B2979 or B and WINDSHIELD DEFROST indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the A/C pressure sensor circuit.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the A/C pressure sensor 3P connector.
7. Disconnect climate control unit connector A (40P).
8. Check for continuity between the following terminals of climate control unit connector A (40P) and the A/C pressure sensor 3P connector.

40P	3P
No. 6	No. 1
No. 8	No. 3
No. 26	No. 2

Fig. 118: Identifying Continuity Between Climate Control Unit A (40P) And A/C Pressure Sensor 3P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire(s) between the climate control unit and the A/C pressure sensor.

9. Reconnect climate control unit connector A (40P).
10. Turn the ignition switch to ON (II).
11. Measure the voltage between climate control unit connector A (40P) No. 6 and No. 8 terminals, and between climate control unit connector A (40P) No. 8 and No. 26 terminals.

Fig. 119: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 6 And No. 8 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Replace the A/C pressure sensor.

NO - Check for loose wires or poor connections at climate control unit connector A (40P) and at the A/C pressure sensor 3P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/ indication goes away, replace the original climate control unit.

DTC B2980 OR DTC INDICATOR B AND WINDSHIELD DEFROST: A SHORT IN THE A/C PRESSURE SENSOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check for DTCs.

Is DTC B2980 or B and WINDSHIELD DEFROST indicated?

YES - Go to step 5.

NO - Intermittent failure.

5. Check for DTCs.

Are these DTCs also present; B1234 or K and AUTO, and/or B1237 or N and AUTO, and/or B1245 or G, and/or B2968 or A and WINDSHIELD DEFROST?

YES - Go to step 16.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the A/C pressure sensor 3P connector.
8. Disconnect climate control unit connector A (40P).
9. Check for continuity between body ground and climate control unit connector A (40P) No. 26 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 120: Identifying Continuity Between Body Ground And Climate Control Unit Connector A

(40P) No. 26 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Repair short to body ground in the wire between the climate control unit and the A/C pressure sensor.**NO** - Go to step 10.

10. Check for continuity between climate control unit connector A (40P) No. 6 and No. 26 terminals.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 121: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 And No. 26 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Repair the short in the wires.**NO** - Go to step 11.

11. Turn the ignition switch to ON (II), and measure the voltage between body ground and climate control unit connector A (40P) No. 26 terminal.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 122: Measuring Voltage Between Body Ground And Climate Control Unit Connector A (40P)

No. 26 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire between the climate control unit and the A/C pressure sensor. This short may also damage the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Go to step 12.

12. Turn the ignition switch to LOCK (0).
13. Reconnect climate control unit connector A (40P).
14. Turn the ignition switch to ON (II).
15. Measure the voltage between climate control unit connector A (40P) No. 6 and No. 8 terminals, and between climate control unit connector A (40P) No. 8 and No. 26 terminals.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 123: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 6 And No. 8 And No. 26 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Replace the A/C pressure sensor.

NO - Check for loose wires or poor connections at climate control unit connector A (40P) and at the A/C pressure sensor 3P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

16. Turn the ignition switch to LOCK (0), and disconnect climate control unit connector A (40P).
17. Disconnect these items:
 - Driver's air mix control motor
 - Passenger's air mix control motor
 - Rear air mix control motor
 - Humidity/in-car temperature sensor

- A/C pressure sensor

18. Check for continuity between climate control unit connector A (40P) No. 6 terminal and body ground.

Fig. 124: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire.

NO - Go to step 19.

19. Turn the ignition switch to ON (II), and check the same terminal for voltage to body ground.

Fig. 125: Identifying Same Terminal For Voltage To Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire. This short may have also damaged the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Go to step 20.

20. Turn the ignition switch to LOCK (0).

21. Reconnect climate control unit connector (40P).
22. Turn the ignition switch to ON (II), and measure the voltage between climate control unit connector A (40P) No. 6 terminal and body ground.

Fig. 126: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 23.

NO - Check for a loose wire or poor connection at climate control unit connector A (40P). If the connection is good, substitute a known-good climate control unit and recheck. If the symptom/ indication goes away, replace the original climate control unit.

23. While checking the same terminal for voltage to ground, reconnect these items individually and note the voltage reading each time:
 - Driver's air mix control motor
 - Passenger's air mix control motor
 - Rear air mix control motor
 - Humidity/in-car temperature sensor
 - A/C pressure sensor

Fig. 127: Identifying Same Terminal For Voltage To Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the voltage remain at about 5 V?

YES - Substitute a known-good climate control unit and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Replace the component that caused the voltage drop.

DTC B2981: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH NAVIGATION UNIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**).
4. Check the DTCs.

Is DTC B2981 indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the navigation unit and climate control unit circuit.

5. Turn the ignition switch to LOCK (0).
6. Disconnect navigation unit connector A (20P).
7. Disconnect climate control unit connector A (40P).
8. Check for continuity between the following terminals of climate control unit connector A (40P) and navigation unit connector A (20P).

40P	20P
No. 2	No. 4
No. 21	No. 15
No. 22	No. 14

Fig. 128: Identifying Continuity Between Climate Control Unit A (40P) And Navigation Unit Connector A (20P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire(s) between the climate control unit and the navigation unit.

9. Check for continuity between body ground and navigation unit connector A (20P) No. 4,14, and 15 terminals individually.

Fig. 129: Identifying Continuity Between Body Ground And Navigation Unit Connector A (20P) No. 4,14, And 15 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the navigation unit.

NO - Go to step 10.

10. Check for continuity between navigation unit connector A (20P) terminals as follows.

TERMINALS REFERENCE CHART

From terminal	To terminals
4	14, 15
14	15

Is there continuity between any of the terminals?

YES - Repair the short in the wires.

NO - Substitute a known-good navigation unit, and recheck. If the symptom goes away, replace the original navigation unit. If the symptom remains, substitute a known-good climate control unit and recheck. If the symptom goes away, replace the original climate control unit.

DTC B2983 OR DTC INDICATOR K: A PROBLEM IN THE RECIRCULATION CONTROL LINKAGE, DOOR, OR MOTOR CIRCUIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**) or climate control unit (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS**).
4. Check the DTCs.

Is DTC B2983 or K indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the recirculation control motor circuit.

5. Turn the ignition switch to LOCK (0).
6. Test the recirculation control motor (see **RECIRCULATION CONTROL MOTOR TEST**).

Is the recirculation control motor OK?

YES - Go to step 7.

NO - Replace the recirculation control motor (see **RECIRCULATION CONTROL MOTOR REPLACEMENT**), or repair the recirculation control linkage or door.

7. Disconnect the recirculation control motor 7P connector.

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

8. Disconnect climate control unit connector A (40P).
9. Check for continuity between the following terminals of climate control unit connector A (40P) and the recirculation control motor 7P connector.

40P	7P
No. 18	No. 1
No. 19	No. 2

Fig. 130: Identifying Continuity Between Climate Control Unit A (40P) And Recirculation Control Motor 7P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire(s) between the climate control unit and the recirculation control motor.

10. Check for continuity between body ground and climate control unit connector A (40P) No. 18 and No. 19 terminals individually.

Fig. 131: Identifying Continuity Between Body Ground And Climate Control Unit Connector A (40P) No. 18 And No. 19 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the recirculation control motor.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit.

DTC B2991: CLIMATE CONTROL UNIT LOST COMMUNICATION WITH AUDIO UNIT

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then ON (II).
3. Do the self-diagnostic with the HDS (see **HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITH THE HDS**).
4. Check for DTCs.

Is DTC B2991 indicated?

YES - Go to step 5.

NO - Intermittent failure, check for loose wires or poor connections on the rear climate control panel and climate control unit circuit.

5. Turn the ignition switch to LOCK (0).
6. Disconnect climate control unit connector B (14P).
7. Disconnect audio unit connector C (24P).
8. Check for continuity between climate control unit connector B (14P) No. 8 terminal and audio unit connector C (24P) No. 24 terminal.

CLIMATE CONTROL UNIT CONNECTOR B (14P)
Wire side of female terminals

Fig. 132: Identifying Continuity Between Climate Control Unit Connector B (14P) No. 8 And No. 24

Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire between the climate control unit and the audio unit.

9. Check for continuity between climate control unit connector B (14P) No. 8 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 133: Identifying Continuity Between Climate Control Unit Connector B (14P) No. 8 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the climate control unit and the audio unit.

NO - Substitute a known-good climate control unit, and recheck. If the symptom/indication goes away, replace the original climate control unit. If the symptom/indication remains, substitute a known-good audio unit. If the symptom/indication goes away, replace the original audio unit.

REAR MODE CONTROL MOTOR CIRCUIT TROUBLESHOOTING

1. Check the No. 30(10 A) fuse in the under-dash fuse/ relay box.

Is the fuse OK?

YES - Go to step 2.

NO - Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. 30 (10 A) fuse circuit.

2. Disconnect the rear mode control motor 7P connector.
3. Turn the ignition switch to ON (II).

4. Measure the voltage between the rear mode control motor 7P connector No. 1 terminal and body ground.

REAR MODE CONTROL MOTOR 7P CONNECTOR

Wire side of female terminals

Fig. 134: Measuring Voltage Between Rear Mode Control Motor 7P Connector No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 5.

NO - Repair open in the wire between the No. 30 (10 A) fuse in the under-dash fuse/relay box and the rear mode control motor.

5. Turn the ignition switch to LOCK (0).
6. Test the rear mode control motor (see **REAR MODE CONTROL MOTOR TEST**).

Is the rear mode control motor OK?

YES - Go to step 7.

NO - Replace the rear mode control motor (see **REAR MODE CONTROL MOTOR TEST**), or repair the rear mode control linkage or door.

7. Disconnect climate control unit connector B (14P).
8. Check for continuity between body ground and climate control unit connector B (14P) No. 3 and No. 4 terminals individually.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 135: Identifying Continuity Between Body Ground And Climate Control Unit Connector B (14P) No. 3 And No. 4 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire(s) between the climate control unit and the rear mode control motor.

NO - Go to step 9.

9. Turn the ignition switch to ON (II), and check the same terminals for voltage to body ground.

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 136: Identifying Same Terminals For Voltage To Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there any voltage?

YES - Repair short to power in the wire(s) between the climate control unit and the rear mode control motor. This short may also damage the climate control unit. Repair the short to power before replacing the climate control unit.

NO - Go to step 10.

10. Turn the ignition switch to LOCK (0).
11. Check for continuity between the following terminals of climate control unit connector B (14P) and the

rear mode control motor 7P connector.

14P	7P
No. 3	No. 5
No. 4	No. 7

CLIMATE CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

REAR MODE CONTROL MOTOR 7P CONNECTOR

Wire side of female terminals

Fig. 137: Identifying Continuity Between Climate Control Unit B (14P) And Rear Mode Control Motor 7P Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at climate control unit connector B (14P) and at the rear mode control motor 7P connector. If the connections are good, substitute a known-good climate control unit, and recheck. If the symptom/ indication goes away, replace the original climate control unit.

NO - Repair open in the wire(s) between the climate control unit and the rear mode control motor.

CLIMATE CONTROL UNIT TROUBLESHOOTING

1. Check the No. 30 (10 A) fuse in the under-dash fuse/ relay box.

Is the fuse OK?

YES - Go to step 2.

NO - Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. 30 (10 A) fuse circuit.

2. Turn the ignition switch to ON (II).
3. Measure the voltage between climate control unit connector A (40P) No. 3 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 138: Measuring Voltage Between Climate Control Unit Connector A (40P) No. 3 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 4.

NO - Repair open in the wire between the No. 30 (10 A) fuse in the under-dash fuse/relay box and the climate control unit.

4. Turn the ignition switch to LOCK (0).
5. Check for continuity between climate control unit connector A (40P) No. 37 terminal and body ground.

CLIMATE CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 139: Identifying Continuity Between Climate Control Unit Connector A (40P) No. 37 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 6.

NO - Check for an open in the wire between the climate control unit and body ground. If the wire is OK, check for poor ground at G506 (see **GROUND TO COMPONENTS INDEX**).

6. Disconnect climate control unit connector A (40P).

7. Disconnect under-dash fuse/relay box connector X (39P).
8. Check for continuity between under-dash fuse/relay box connector X (39P) No. 27 terminal and climate control unit connector A (40P) No. 4 terminal.

UNDER-DASH FUSE/RELAY BOX CONNECTOR X (39P)
Wire side of female terminals

Fig. 140: Identifying Continuity Between Under-Dash Fuse/Relay Box Connector X (39P) No. 27 And No. 4 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires and poor connections at climate control unit connector A (40P). If the connections are good, substitute a known-good climate control unit and recheck. If the symptom/indication goes away, replace the original climate control unit.

NO - Repair open in the wire between the MICU and the climate control unit.

RADIATOR AND A/C CONDENSER FAN LOW SPEED CIRCUIT TROUBLESHOOTING

NOTE:

- Do not use this troubleshooting procedure if the A/C compressor is inoperative. Refer to the **SYMPTOM TROUBLESHOOTING INDEX**.
- Before performing symptom troubleshooting, check for powertrain DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Check the No. 15 (30 A) fuse in the relay block, and the No. 30 (10 A) fuse in the under-dash fuse/relay

box.

Are the fuses OK?

YES - Go to step 2.

NO - Replace the fuse(s), and recheck. If the fuse(s) blow again, check for a short in the No. 15 (30 A) and No. 30 (10 A) fuse(s) circuit.

2. Remove the A/C condenser fan relay from the relay block, and test it (see **POWER RELAY TEST**).

Is the relay OK?

YES - Go to step 3.

NO - Replace the A/C condenser fan relay.

3. Connect the HDS to the DLC.
4. Turn the ignition switch to ON (II).
5. Turn on the A/C.
6. Check the FAN LOW CTRL in the PGM-FI Data List with the HDS.

Is the FAN LOW CTRL on?

YES - Go to step 7.

NO - Substitute a known-good PCM (see **SUBSTITUTING THE PCM**), and retest. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

7. Measure the voltage between the A/C condenser fan relay 4P socket No. 1 terminal and body ground.

A/C CONDENSER FAN RELAY 4P SOCKET

Fig. 141: Measuring Voltage Between A/C Condenser Fan Relay 4P Socket No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 8.

NO - Replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

8. Connect the A/C condenser fan relay 4P socket No. 1 and No. 2 terminals with a jumper wire.

A/C CONDENSER FAN RELAY 4P SOCKET

Fig. 142: Identifying A/C Condenser Fan Relay 4P Socket No. 1 And No. 2 Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Do the A/C condenser and radiator fans run on low?

YES - Go to step 9.

NO - Go to step 18.

9. Disconnect the jumper wire.
10. Turn the ignition switch to ON (II).
11. Measure the voltage between the A/C condenser fan relay 4P socket No. 4 terminal and body ground.

A/C CONDENSER FAN RELAY 4P SOCKET

Fig. 143: Measuring Voltage Between A/C Condenser Fan Relay 4P Socket No. 4 Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 12.

NO - Go to step 36.

12. Turn the ignition switch to LOCK (0).
13. Reinstall the A/C condenser fan relay.
14. Jump the SCS line with the HDS.

NOTE: This step must be done to protect the powertrain control module (PCM) from damage.

15. Disconnect PCM connector A (49P).
16. Connect PCM connector A (49P) No. 4 terminal to body ground with a jumper wire.

Fig. 144: Identifying PCM Connector A (49P) No. 4 Terminal To Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Turn the ignition switch to ON (II).

Do the A/C condenser and radiator fans run on low?

YES - Check for loose wires or poor connections at PCM connector A (49P) terminal No. 4. If the connections are good, substitute a known-good PCM, and recheck. If the symptom/indication goes away, replace the original PCM (see **PCM REPLACEMENT**).

NO - Repair open in the wire between the A/C condenser fan relay and the PCM.

18. Disconnect the jumper wire.
19. Reinstall the A/C condenser fan relay.
20. Disconnect the A/C condenser fan 2P connector.
21. Turn the ignition switch to ON (II), then set the A/C button and fan control button ON.
22. Measure the voltage between the A/C condenser fan 2P connector No. 2 terminal and body ground.

A/C CONDENSER FAN 2P CONNECTOR

Wire side of female terminals

Fig. 145: Measuring Voltage Between A/C Condenser Fan 2P Connector No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 23.

NO - Repair open in the wire between the A/C condenser fan relay and the A/C condenser fan.

23. Set the A/C button and fan control button OFF, then turn the ignition switch to LOCK (0).
24. Reconnect the A/C condenser fan 2P connector.
25. Connect the A/C condenser fan 2P connector No. 1 terminal to body ground with a jumper wire.

A/C CONDENSER FAN 2P CONNECTOR

Wire side of female terminals

Fig. 146: Identifying A/C Condenser Fan 2P Connector No. 1 Terminal To Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Turn the ignition switch to ON (II), then set the A/C button and fan control button ON.

Does the A/C condenser fan run at high speed?

YES - Go to step 27.

NO - Replace the A/C condenser fan motor (see **RADIATOR AND FAN REPLACEMENT**).

27. Set the A/C button and fan control button OFF, then turn the ignition switch to LOCK (0).
28. Disconnect the jumper wire.

29. Remove the fan control relay from the relay block, and test it (see **RELAY CONTROL MODULE TEST**).

Is the relay OK?

YES - Go to step 30.

NO - Replace the fan control relay.

30. Turn the ignition switch to ON (II), then set the A/C button and fan control button ON.
31. Measure the voltage between the fan control relay 5P socket No. 1 terminal and body ground.

FAN CONTROL RELAY 5P SOCKET

Fig. 147: Measuring Voltage Between Fan Control Relay 5P Socket No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 32.

NO - Repair open in the wire between the A/C condenser fan and the fan control relay.

32. Set the A/C button and fan control button OFF, then turn the ignition switch to LOCK (0).
33. Disconnect the radiator fan 2P connector.
34. Check for continuity between the fan control relay 5P socket No. 4 terminal and the radiator fan 2P connector No. 2 terminal.

FAN CONTROL RELAY 5P SOCKET

RADIATOR FAN 2P CONNECTOR
Wire side of female terminals

Fig. 148: Identifying Continuity Between Fan Control Relay 5P Socket No. 4 And No. 2 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 35.

NO - Repair open in the wire between the fan control relay and the radiator fan.

35. Check for continuity between the radiator fan 2P connector No. 1 terminal and body ground.

RADIATOR FAN 2P CONNECTOR

Wire side of female terminals

Fig. 149: Identifying Continuity Between Radiator Fan 2P Connector No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the radiator fan motor (see **RADIATOR AND FAN REPLACEMENT**).

NO - Check for an open in the wire between the radiator fan and body ground. If the wire is OK, check for poor ground at G301 (see **GROUND TO COMPONENTS INDEX**).

36. Turn the ignition switch to LOCK (0).
37. Remove A/C diode A from the relay block.

38. Using the diode setting on a DVOM, check for current flow in both directions between the A/C diode A No. 1 and No. 2 terminals.

Fig. 150: Identifying Current Flow In Both Directions Between A/C Diode No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there current flow in only one direction?

YES - Go to step 39.

NO - Replace A/C diode A.

39. Turn the ignition switch to ON (II).
40. Measure the voltage between A/C diode A 2P socket No. 2 terminal and body ground.

A/C DIODE A 2P SOCKET

Fig. 151: Measuring Voltage Between A/C Diode 2P Socket No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

NO - Repair open in the wire between the No. 30 (10 A) fuse in the under-dash fuse/relay box and A/C diode A.

A/C CONDENSER FAN HIGH SPEED CIRCUIT TROUBLESHOOTING

NOTE:

- Do not use this troubleshooting procedure if the radiator fan and/or the A/C compressor is inoperative. Refer to the **SYMPTOM TROUBLESHOOTING INDEX**.
- Before doing any symptom troubleshooting, check for powertrain DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Remove the fan control relay from the relay block, and test it (see **RELAY CONTROL MODULE TEST**).

Is the relay OK?

YES - Go to step 2.

NO - Replace the fan control relay.

2. Turn the ignition switch to ON (II).
3. Measure the voltage between the fan control relay 5P socket No. 5 terminal and body ground.

FAN CONTROL RELAY 5P SOCKET

Fig. 152: Measuring Voltage Between Fan Control Relay 5P Socket No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 4.

NO - Replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

4. Turn the ignition switch to LOCK (0).
5. Check for continuity between the fan control relay 5P socket No. 2 terminal and body ground.

FAN CONTROL RELAY 5P SOCKET

Fig. 153: Identifying Continuity Between Fan Control Relay 5P Socket No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 6.

NO - Check for an open in the wire between the fan control relay and body ground. If the wire is OK, check for poor ground at G202 (see **GROUND TO COMPONENTS INDEX**).

6. Jump the SCS line with the HDS.

NOTE: This step must be done to protect the powertrain control module (PCM) from damage.

7. Disconnect PCM connector A (49P).
8. Check for continuity between the fan control relay 5P socket No. 3 terminal and PCM connector A (49P) No. 5 terminal.

FAN CONTROL RELAY 5P SOCKET

Fig. 154: Identifying Continuity Between Fan Control Relay 5P Socket No. 3 And No. 5 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose wires or poor connections at PCM connector A (49P) No. 5 terminal. If the connections are good, substitute a known-good PCM, and recheck. If the symptom/indication goes away, replace the original PCM (see **PCM REPLACEMENT**).

NO - Repair open in the wire between the fan control relay and the PCM.

A/C COMPRESSOR CLUTCH CIRCUIT TROUBLESHOOTING

NOTE:

- It is normal for the A/C compressor to turn off under certain conditions, such as low idle, high engine coolant temperature, hard acceleration, or high/low pressure.
- Do not use this troubleshooting procedure if the fans are also inoperative with the A/C on. Refer to the **SYMPTOM TROUBLESHOOTING INDEX**.
- Before doing any symptom troubleshooting, check for powertrain DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Check the No. 17 (7.5 A) fuse in the relay block, and the No. 30 (10 A) fuse in the under-dash fuse/relay box.

Are the fuses OK?

YES - Go to step 2.

NO - Replace the fuse(s) and recheck. If the fuse(s) blow again, check for a short in the No. 17 (7.5 A) and No. 30 (10 A) fuse(s) circuit.

2. Connect the HDS to the DLC.
3. Start the engine.
4. Turn on the A/C.
5. Check the A/C CLUTCH in the PGM-FI Data List with the HDS.

Is the A/C CLUTCH on?

YES - Go to step 7.

NO - Go to step 6.

6. Using the HDS, confirm the following values in the PGM-FI Data List at idle.

A/C SWITCH REFERENCE CHART

A/C SWITCH	ON
A/C PRESSURE SENSOR	196-3, 138 kPa (2-32 kgf/cm ²) [28-455 psi]

Are all the values within specifications?

YES - Go to step 7.

NO - Troubleshoot the value that is not within the specifications.

7. Remove the A/C compressor clutch relay from the relay block, and test it (see **POWER RELAY TEST**).

Is the relay OK?

YES - Go to step 8.

NO - Replace the A/C compressor clutch relay.

8. Measure the voltage between the A/C compressor clutch relay 4P socket No. 1 terminal and body ground.

A/C COMPRESSOR CLUTCH RELAY 4P SOCKET

Fig. 155: Measuring Voltage Between A/C Compressor Clutch Relay 4P Socket No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 9.

NO - Replace the relay block (see **REMOVAL AND INSTALLATION**).

9. Connect the A/C compressor clutch relay 4P socket No. 1 and No. 2 terminals with a jumper wire.

A/C COMPRESSOR CLUTCH RELAY 4P SOCKET

Fig. 156: Identifying A/C Compressor Clutch Relay 4P Socket No. 1 And No. 2 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the A/C compressor clutch click?

YES - Go to step 10.

NO - Go to step 19.

10. Disconnect the jumper wire.
11. Turn the ignition switch to ON (II).
12. Measure the voltage between the A/C compressor clutch relay 4P socket No. 4 terminal and body ground.

A/C COMPRESSOR CLUTCH RELAY 4P SOCKET

Fig. 157: Measuring Voltage Between A/C Compressor Clutch Relay 4P Socket No. 4 Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 13.

NO - Repair open in the wire between the No. 30 (10 A) fuse in the under-dash fuse/relay box and the A/C compressor clutch relay.

13. Turn the ignition switch to LOCK (0).
14. Reinstall the A/C compressor clutch relay.
15. Jump the SCS line with the HDS.

NOTE: This step must be done to protect the powertrain control module (PCM) from damage.

16. Disconnect PCM connector A (49P).
17. Connect PCM connector A (49P) No. 13 terminal to body ground with a jumper wire.

Fig. 158: Identifying PCM Connector A (49P) No. 13 Terminal To Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Turn the ignition switch to ON (II).

Does the A/C compressor click?

YES - Check for loose wires or poor connections at PCM connector A (49P). If the connections are good, check the PCM grounds. If the grounds are good, substitute a known-good PCM, and recheck. If the symptom/indication goes away, replace the original PCM (see **PCM REPLACEMENT**).

NO - Repair open in the wire between the A/C compressor clutch relay and the PCM.

19. Disconnect the jumper wire.
20. Disconnect the A/C compressor clutch 1P connector.
21. Check for continuity between the A/C compressor clutch relay 4P socket No. 2 terminal and the A/C compressor clutch 1P connector No. 1 terminal.

A/C COMPRESSOR CLUTCH RELAY 4P SOCKET

A/C COMPRESSOR CLUTCH 1P CONNECTOR
 Wire side of female terminal

Fig. 159: Identifying Continuity Between A/C Compressor Clutch Relay 4P Socket No. 2 And No. 1

Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check the A/C compressor clutch clearance, and the compressor clutch field coil (see **A/C COMPRESSOR CLUTCH CHECK**). Repair as needed.

NO - Repair open in the wire between the A/C compressor clutch relay and the A/C compressor clutch.

HUMIDITY/IN-CAR TEMPERATURE SENSOR TEST

HUMIDITY SENSOR TEST

1. Remove the humidity/in-car temperature sensor (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT**).
2. Connect the humidity/in-car temperature sensor 4P connector.
3. Turn the ignition switch to ON (II). Measure the voltage between the terminals with the (+) probe on the No. 2 terminal and the (-) probe on the No. 3 terminal with the connector connected.

Fig. 160: Measuring Voltage Between Terminals With (+) Probe On No. 2 And (-) Probe On No. 3 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the voltage is not as specified, replace the humidity/in-car temperature sensor (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT**).

IN-CAR TEMPERATURE SENSOR TEST

1. Remove the humidity/in-car temperature sensor (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT**).
2. Connect the humidity/in-car temperature sensor 4P connector.
3. Test the humidity/in-car temperature sensor while holding it in front of the dashboard center vent.
 - Measure the resistance with the system set to Max Cool.
 - Measure the resistance with the system set to Max Hot.
4. Compare the resistance reading between the No. 4 and No. 3 terminals of the humidity/in-car temperature sensor with the specifications shown in the graph; the resistance should be within the specifications.

Fig. 161: Resistance To Temperature Graph

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the resistance is not as specified, replace the humidity/in-car temperature sensor (see **HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT**).

HUMIDITY/IN-CAR TEMPERATURE SENSOR REPLACEMENT

1. Remove the driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).

2. Remove the humidity/in-car temperature sensor (A) from the driver's dashboard lower cover (B).

Fig. 162: Identifying Humidity/In-Car Temperature Sensor And Driver's Dashboard Lower Cover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the sensor in the reverse order of removal. Be sure to connect the air hose securely.

OUTSIDE AIR TEMPERATURE SENSOR TEST

1. Remove the outside air temperature sensor (see **OUTSIDE AIR TEMPERATURE SENSOR REPLACEMENT**).
2. Dip the sensor in ice water, and measure the resistance. Then pour warm water on the sensor, and check for a change in resistance.
3. Compare the resistance reading between the No. 1 and No. 2 terminals of the outside air temperature sensor with the specifications shown in the graph; the resistance should be within the specifications.

Fig. 163: Resistance To Temperature Graph

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the resistance is not as specified, replace the outside air temperature sensor (see **OUTSIDE AIR TEMPERATURE SENSOR REPLACEMENT**).

OUTSIDE AIR TEMPERATURE SENSOR REPLACEMENT

1. Remove the bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
2. Lift the tab (A) to release the lock, then remove the outside air temperature sensor (B) from the back of the front bumper. Disconnect the 2P connector (C) from the outside air temperature sensor.

**Fig. 164: Identifying Tab,Air Temperature Sensor And 2P Connector**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the sensor in the reverse order of removal.

SUNLIGHT SENSOR TEST

1. Remove the sunlight sensor from the dashboard (see **SUNLIGHT SENSOR REPLACEMENT**).
2. Connect the sunlight sensor 5P connector.
3. Turn the ignition switch to ON (II). Measure the voltage between the terminals with the (+) probe on the No. 4 terminal and the (-) probe on the No. 2 terminal with the connector connected.

NOTE: The voltage readings will not change under the light of a flashlight or a fluorescent lamp.

Voltage should be:

- 3.6-3.7 V or more with the sensor out of direct sunlight.
- 3.3-3.5 V or less with the sensor in direct sunlight.

Fig. 165: Measuring Voltage Between Terminals With (+) Probe On No. 4 And (-) Probe On No. 2 Terminal With Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the voltage is not as specified, replace the sunlight sensor (see **SUNLIGHT SENSOR REPLACEMENT**).

SUNLIGHT SENSOR REPLACEMENT

1. Remove the sunlight sensor (A) from the dashboard, then disconnect the 5P connector (B). Be careful not to damage the sensor and the dashboard.

Fig. 166: Identifying Sunlight Sensor And 5P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the sensor in the reverse order of removal.

FRONT EVAPORATOR TEMPERATURE SENSOR TEST

1. Remove the evaporator front temperature sensor (see **FRONT EVAPORATOR TEMPERATURE SENSOR REPLACEMENT**).
2. Dip the sensor in ice water, and measure the resistance between its terminals.

FRONT EVAPORATOR TEMPERATURE SENSOR

Terminal side of male terminals

Fig. 167: Measuring Resistance Between Evaporator Front Temperature Sensor Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Then pour warm water on the sensor, and check for a change in the resistance.
4. Compare the resistance readings with the specifications shown in the graph; the resistance should be within the specifications.

**Fig. 168: Resistance To Temperature Graph**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the resistance is not as specified, replace the front evaporator temperature sensor (see **FRONT EVAPORATOR TEMPERATURE SENSOR REPLACEMENT**).

FRONT EVAPORATOR TEMPERATURE SENSOR REPLACEMENT

1. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
2. Remove the TPMS control unit (see **TPMS CONTROL UNIT REPLACEMENT**).
3. Disconnect the connector (A) from the front evaporator temperature sensor (B), then remove the connector clip (C). Remove the self-tapping screw and the front evaporator temperature sensor.

Fig. 169: Identifying Front Evaporator Temperature Sensor, Connector And Connector Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the sensor in the reverse order of removal.

FRONT POWER TRANSISTOR TEST

1. Remove the passenger's dashboard undercover (see PASSENGER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION).
2. Disconnect the 4P connector from the front power transistor.
3. Measure the resistance between the No. 3 and No. 4 terminals of the front power transistor. It should be about 1.5 kohms.
 - If the resistance is within the specifications, go to step 4.
 - If the resistance is not within the specifications, replace the front power transistor.

NOTE: Also check the front blower motor. Front power transistor failure can be caused by a defective front blower motor.

FRONT POWER TRANSISTOR

Fig. 170: Measuring Resistance Between No. 3 And No. 4 Terminals Of Front Power Transistor

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully release the lock tab on the No. 1 terminal (RED) (A) in the 4P connector, then remove the terminal and insulate it from body ground.

Fig. 171: Identifying 4P Connector Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Reconnect the 4P connector to the front power transistor.
6. Make sure the RED wire is completely isolated, then supply 12 V to the No. 1 cavity with a jumper wire.
7. Turn the ignition switch to ON (II), and check that the front blower motor runs.
 - If the front blower motor does not run, replace the front power transistor.

NOTE: A faulty front blower motor can cause the front power transistor to fail. If the front power transistor is replaced, also check the front blower motor for binding, and replace it if necessary.

- If the front blower motor runs, the front power transistor is OK.

DRIVER'S AIR MIX CONTROL MOTOR TEST

NOTE: Before testing, check for HVAC DTCs (see GENERAL TROUBLESHOOTING INFORMATION).

1. Disconnect the 7P connector from the driver's air mix control motor.

NOTE: Incorrectly applying power and ground to the driver's air mix control motor will damage it. Follow the instructions carefully.

2. Connect battery power to the No. 1 terminal of the driver's air mix control motor, and ground the No. 2

terminal; the driver's air mix control motor should run, and stop at Max Cool. If it doesn't, reverse the connections; the driver's air mix control motor should run, and stop at Max Hot. When the driver's air mix control motor stops running, disconnect battery power immediately.

DRIVER'S AIR MIX CONTROL MOTOR

Fig. 172: Identifying Driver's Air Mix Control Motor Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the driver's air mix control motor did not run in step 2, remove it, then check the driver's air mix control linkage and door for smooth movement.
 - If the linkage and door move smoothly, replace the driver's air mix control motor (see **DRIVER'S AIR MIX CONTROL MOTOR REPLACEMENT**).
 - If the linkage or door sticks or binds, repair them as needed.
 - If the driver's air mix control motor runs smoothly, go to step 4.
4. Measure the resistance between the No. 5 and No. 7 terminals. It should be between 4.2 to 7.8 kohms.
5. Reconnect the driver's air mix control motor 7P connector, then turn the ignition switch to ON (II).
6. Using the backprobe set, measure the voltage between the No. 3 and No. 5 terminals.

Max Cool: about 0.5 V

Max Hot: about 4.5 V

7. If either the resistance or voltage readings are not as specified, replace the driver's air mix control motor (see **DRIVER'S AIR MIX CONTROL MOTOR REPLACEMENT**).

DRIVER'S AIR MIX CONTROL MOTOR REPLACEMENT

1. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
2. Disconnect the 7P connector (A) from the driver's air mix control motor (B). Remove the self-tapping screws and the driver's air mix control motor from the heater unit.

Fig. 173: Identifying Driver's Air Mix Control Motor And 7P Connector With Screws
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal. Make sure the pin on the motor is properly engaged with the linkage. After installation, make sure the motor runs smoothly.

PASSENGER'S AIR MIX CONTROL MOTOR TEST

NOTE: Before testing, check for HVAC DTCs (see GENERAL TROUBLESHOOTING INFORMATION).

1. Disconnect the 7P connector from the passenger's air mix control motor.

NOTE: Incorrectly applying power and ground to the passenger's air mix control motor will damage it. Follow the instructions carefully.

2. Connect battery power to the No. 1 terminal of the passenger's air mix control motor, and ground the No. 2 terminal; the passenger's air mix control motor should run, and stop at Max Cool. If it doesn't, reverse the connections; the passenger's air mix control motor should run, and stop at Max Hot. When the passenger's air mix control motor stops running, disconnect battery power immediately.

PASSENGER'S AIR MIX CONTROL MOTOR

Fig. 174: Identifying Passenger's Air Mix Control Motor Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the passenger's air mix control motor did not run in step 2, remove it, then check the passenger's air mix

control linkage and door for smooth movement.

- If the linkage and door move smoothly, replace the passenger's air mix control motor (see **PASSENGER'S AIR MIX CONTROL MOTOR REPLACEMENT**).
 - If the linkage or door sticks or binds, repair them as needed.
 - If the passenger's air mix control motor runs smoothly, go to step 4.
4. Measure the resistance between the No. 5 and No. 7 terminals. It should be between 4.2 to 7.8 k ohms.
 5. Reconnect the passenger's air mix control motor 7P connector, then turn the ignition switch to ON (II).
 6. Using the backprobe set, measure the voltage between the No. 3 and No. 5 terminals.

Max Cool: about 1.5 V

Max Hot: about 4.5 V

7. If either the resistance or voltage readings are not as specified, replace the passenger's air mix control motor (see **PASSENGER'S AIR MIX CONTROL MOTOR REPLACEMENT**).

PASSENGER'S AIR MIX CONTROL MOTOR REPLACEMENT

1. Remove the glove box (see **GLOVE BOX REMOVAL/INSTALLATION**).
2. Disconnect the 7P connector (A) from the passenger's air mix control motor (B). Remove the self-tapping screws and the passenger's air mix control motor from the heater unit.

Fig. 175: Identifying Passenger's Air Mix Control Motor And 7P Connector With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal. Make sure the pin on the motor is properly engaged with the linkage. After installation, make sure the motor runs smoothly.

FRONT MODE CONTROL MOTOR TEST

NOTE: Before testing, check for HVAC DTCs (see GENERAL TROUBLESHOOTING INFORMATION).

1. Disconnect the 7P connector from the front mode control motor.

NOTE: Incorrectly applying power and ground to the front mode control motor will damage it. Follow the instructions carefully.

2. Connect battery power to the No. 1 terminal of the front mode control motor, and ground the No. 2 terminal; the front mode control motor should run smoothly, and stop at Vent. If it doesn't, reverse the connections; the front mode control motor should run smoothly, and stop at Defrost. When the front mode control motor stops running, disconnect battery power immediately.

Fig. 176: Identifying Front Mode Control Motor Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the front mode control motor did not run in step 2, remove it, then check the front mode control linkage and doors for smooth movement.
 - If the linkage and doors move smoothly, replace the front mode control motor (see FRONT MODE CONTROL MOTOR REPLACEMENT).
 - If the linkage or doors stick or bind, repair them as needed.
 - If the front mode control motor runs smoothly, go to step 4.
4. Use a digital multimeter with an output of 1 mA or less at the 20 kohms range. With the front mode control motor running as in step 2, check for continuity between the No. 3, 4, 5, and 6 terminals and the No. 7 terminal individually. There should be continuity for a moment at each terminal as the motor moves past the switch's terminal.
5. If there is no continuity for a moment at each terminal, replace the front mode control motor (see FRONT MODE CONTROL MOTOR REPLACEMENT).

FRONT MODE CONTROL MOTOR REPLACEMENT

1. Remove the glove box (see GLOVE BOX REMOVAL/INSTALLATION).
2. Disconnect the 7P connector (A) from the front mode control motor (B). Remove the self-tapping screws and the front mode control motor from the heater unit.

Fig. 177: Identifying Front Mode Control Motor And 7P Connector With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal. Make sure the pin on the motor is properly engaged with the linkage. After installation, make sure the motor runs smoothly.

RECIRCULATION CONTROL MOTOR TEST

NOTE: Before testing, check for HVAC DTCs (see GENERAL TROUBLESHOOTING INFORMATION).

1. Disconnect the 7P connector from the recirculation control motor.

NOTE: Incorrectly applying power and ground to the recirculation control motor will damage it. Follow the instructions carefully.

2. Connect battery power to the No. 1 terminal of the recirculation control motor, and ground the No. 2 terminal; the recirculation control motor should run smoothly, and stop at Fresh. If it doesn't, reverse the connections; the recirculation control motor should run smoothly, and stop at Recirculate. When the recirculation control motor stops running, disconnect battery power immediately.

Fig. 178: Identifying Recirculation Control Motor Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the recirculation control motor did not run in step 2, remove it, then check the recirculation control linkage and door for smooth movement.
 - If the linkage and door move smoothly, replace the recirculation control motor (see **RECIRCULATION CONTROL MOTOR REPLACEMENT**).
 - If the linkage or door stick or bind, repair them as needed.
 - If the recirculation control motor runs smoothly, go to step 4.
4. Use a digital multimeter with an output of 1 mA or less at the 20 kohms range. With the recirculation control motor running as in step 2, check for continuity between the No. 3,4, and 5 terminals and the No. 7 terminal individually. There should be continuity for a moment at each terminal as the motor moves past the switch's terminal.
5. If there is no continuity for a moment at each terminal, replace the recirculation control motor (see **RECIRCULATION CONTROL MOTOR REPLACEMENT**).

RECIRCULATION CONTROL MOTOR REPLACEMENT

1. Remove the glove box (see **GLOVE BOX REMOVAL/INSTALLATION**).
2. Disconnect the 7P connector (A) from the recirculation control motor (B). Remove the self-tapping screws and the recirculation control motor from the heater unit.

Fig. 179: Identifying Recirculation Control Motor And 7P Connector With Screws

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal. Make sure the pin on the motor is properly engaged with the linkage. After installation, make sure the motor runs smoothly.

CLIMATE CONTROL UNIT REMOVAL/ INSTALLATION

1. Remove the audio unit (see [AUDIO UNIT REMOVAL/INSTALLATION](#)).
2. Remove the self-tapping screws, bolts, brackets (A), and the climate control unit (B).

Fig. 180: Identifying Self-Tapping Screws, Bolts, Brackets And Climate Control Unit
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the control unit in the reverse order of removal. After installation, operate the various functions to see whether works properly.
4. Run the self-diagnostic function to confirm that there are no problems in the system (see [HOW TO USE THE SELF-DIAGNOSTIC FUNCTION WITHOUT THE HDS](#)).

DUST AND POLLEN FILTER REPLACEMENT

1. Open the glove box. Remove the glove box stop on right side, then let the glove box hang down (see [GLOVE BOX REMOVAL/INSTALLATION](#)).
2. Remove the dust and pollen filter assembly (A) from the blower unit.

Fig. 181: Identifying Dust And Pollen Filter Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the filter (A) from the housing (B), and replace the filter.

Fig. 182: Identifying Filter And Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the filter in the reverse order of removal. Make sure that there is no air leaking out of the blower unit.

BLOWER UNIT REMOVAL/INSTALLATION

1. Remove the glove box (see **GLOVE BOX REMOVAL/INSTALLATION**).
2. Remove the harness clips (A), the bolts, and the glove box frame (B).

Fig. 183: Identifying Harness Clips And Glove Box Frame With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Cut the plastic cross brace (A) in the glove box opening with diagonal cutters in the area shown, and discard it.

Fig. 184: Identifying Plastic Cross Brace Cutting Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the wire harness clips (A), the self-tapping screws, and the passenger's heater duct (B).

Fig. 185: Identifying Wire Harness Clips And Passenger's Heater Duct With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the connector (A) from the front blower motor. Remove the wire harness clips (B).

Fig. 186: Identifying Front Blower Motor Connector And Wire Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the connectors (A) from the recirculation control motor and adaptive front lighting control unit, then remove the harness clip (B). Remove the self-tapping screws, the mounting nuts, and the blower unit (C).

Fig. 187: Identifying Recirculation Control Motor Connector, Harness Clip And Blower Unit With Screws With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the unit in the reverse order of removal. Make sure that there is no air leakage.

BLOWER UNIT COMPONENT REPLACEMENT

Note these items when overhauling the blower unit:

- The recirculation control motor (A), front blower motor (B) and the dust and pollen filter (C) can be replaced without removing the blower unit.
- Before reassembly, make sure that the recirculation control linkage and door move smoothly without binding.
- After reassembly, make sure the recirculation control motor runs smoothly (see **RECIRCULATION CONTROL MOTOR REPLACEMENT**).

Fig. 188: Identifying Recirculation Control Motor, Front Blower Motor And Dust And Pollen Filter
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT EXPANSION VALVE REPLACEMENT

1. Recover the refrigerant with a recovery/recycling/ charging station (see **REFRIGERANT RECOVERY**).
2. Remove the front evaporator core (see **FRONT EVAPORATOR CORE REPLACEMENT**).
3. Remove the bolts, then remove the front expansion valve (A) and O-rings (B).

Fig. 189: Identifying Front Expansion Valve And O-Rings Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the front expansion valve in the reverse order of removal, and note these items:
 - Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.
 - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
 - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.
 - Make sure that there is no air leakage.
 - Charge the system (see **SYSTEM CHARGING**).

FRONT EVAPORATOR CORE REPLACEMENT

1. Recover the refrigerant with a recovery/recycling/ charging station (see **REFRIGERANT RECOVERY**).
2. Remove the bolts.

Fig. 190: Identifying Front Evaporator Core Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts, then disconnect the front receiver line (A) and the front suction line (B) from the front evaporator core.

Fig. 191: Identifying Front Receiver Line And Front Suction Line Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the blower unit (see **BLOWER UNIT REMOVAL/INSTALLATION**).
5. Disconnect the connector (A) from the front power transistor, then remove the harness clip (B). Remove the self-tapping screws, the expansion valve cover (C), and the seal (D).

Fig. 192: Identifying Front Power Transistor Connector, Harness Clip, Expansion Valve Cover And Seal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the bolts, the inlet and outlet pipes (A), and expansion valve (B). Carefully pull out the front

evaporator core (C), then remove the plate (D).

Fig. 193: Identifying Inlet And Outlet Pipes, Expansion Valve. Front Evaporator Core And Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the core in the reverse order of removal, and note these items:
 - If you're installing a new front evaporator core, add refrigerant oil (DENSO ND-OIL 8) (see **A/C SERVICE TIPS AND PRECAUTIONS**).
 - Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.
 - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
 - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.
 - Make sure that there is no air leakage.
 - Charge the system (see **SYSTEM CHARGING**).

HEATER UNIT/CORE REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

1. Do the battery terminal disconnection procedure.(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
2. Disconnect the front receiver line and front suction line from the front evaporator core (see **FRONT EVAPORATOR CORE REPLACEMENT**).

3. From under the hood, open the cable clamp (A), then disconnect the heater valve cable (B) from the heater valve arm (C). Turn the heater valve arm to the fully opened position as shown.

Fig. 194: Turning Heater Valve Arm

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. When the engine is cool, drain the engine coolant from the radiator (see **COOLANT CHECK**).
5. Remove the clamp (A). Slide the hose clamps (B) back. Remove the nut and the water valve (C), then disconnect the inlet heater hose (D) and the outlet heater hose (E) from the heater unit. Engine coolant will run out when the hoses are disconnected; drain it into a clean drip pan. Be sure not to let coolant spill on the electrical parts or the painted surfaces. If any coolant spills, rinse it off immediately.

Fig. 195: Identifying Clamp, Slide Hose Clamps, Water Valve, Heater Hose And Outlet Heater Hose Nut With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the mounting nuts from the heater unit. Take care not to damage or bend the fuel lines or brake lines, etc.

Fig. 196: Identifying Heater Unit Mounting Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the dashboard (see **DASHBOARD REPLACEMENT**).
8. Disconnect the connector (A) from the front blower motor. Remove the wire harness clips (B).

Fig. 197: Identifying Front Blower Motor Connector And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the connector (A) from the adaptive front lighting control unit, then remove the harness clip (B).

Fig. 198: Identifying Adaptive Front Lighting Control Unit Connector And Harness Clip
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Disconnect the connectors (A) from the front mode control motor, the passenger's air mix control motor, the recirculation control motor, and the front power transistor. Remove the wire harness clips (B).

Fig. 199: Identifying Front Mode Control Motor Connector And Wire Harness Clip
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Disconnect the connectors (A) from the driver's air mix control motor and the front evaporator temperature sensor. Remove the wire harness clips (B) and the wire harness (C).

Fig. 200: Identifying Driver's Air Mix Control Motor Connector And Wire Harness Clips And Wire Harness

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Turn over the carpet. Remove the wire harness clips (A), the rear heater duct mounting clips (B), and the rear heater duct (C).

Fig. 201: Identifying Wire Harness Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the mounting nuts. Slide the blower-heater unit (A), then remove the drain hose (B) and blower-heater unit.

Fig. 202: Identifying Blower-Heater Unit And Drain Hose With Mounting Nuts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the self-tapping screws and the passenger's heater duct (A). Remove the self-tapping screws and the expansion valve cover (B). Remove the self-tapping screw and the front heater core cover (C). Remove the self-tapping screws, the heater pipe brackets (D), the grommets (E), and carefully pull out the front heater core (F).

Fig. 203: Identifying Passenger's Heater Duct, Expansion Valve Cover, Front Heater Core Cover And Grommets

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the front heater core, and the front evaporator core in the reverse order of removal.
16. Install the heater unit in the reverse order of removal, and note these items:

- Do not interchange the inlet and outlet heater hoses, and install the hose clamps securely.
 - Refill the cooling system with engine coolant (see **COOLANT CHECK**).
 - Adjust the heater valve cable (see **HEATER VALVE CABLE ADJUSTMENT**).
 - Make sure that there is no coolant leakage.
 - Make sure that there is no air leakage.
 - Refer to the **FRONT EVAPORATOR CORE REPLACEMENT** .
17. Do the battery terminal reconnection procedure.(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).

HEATER VALVE CABLE ADJUSTMENT

1. From under the hood, open the cable clamp (A), then disconnect the heater valve cable (B) from the heater valve arm (C).

Fig. 204: Identifying Cable Clamp, Heater Valve Cable And Heater Valve Arm
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. From under the dash, disconnect the heater valve cable housing from the cable clamp (A), and disconnect the heater valve cable (B) from the driver's air mix control linkage (C).

Fig. 205: Identifying Cable Clamp, Heater Valve Cable And Driver's Air Mix Control Linkage

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Set the temperature control dial to Max Cool (Lo) with the ignition switch to ON (II).
4. Attach the heater valve cable (B) to the driver's air mix control linkage (C) as shown step 2. Snap the heater valve cable housing into the cable clamp (A).

NOTE: Make sure the ring-end of the cable is pushed all the way to the base of the pin on driver's air mix control linkage.

5. From under the hood, turn the heater valve arm (A) to the fully closed position as shown, and hold it. Attach the heater valve cable (B) to the heater valve arm, and gently pull on the heater valve cable housing to take up any slack, then install the heater valve cable housing into the cable clamp (C).

Fig. 206: Identifying Heater Valve Arm

Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/C COMPRESSOR REPLACEMENT

NOTE: Do not install the A/C compressor into a system unless you are completely sure that the system is free of contamination. Installing the A/C compressor into a contaminated system can result in premature A/C compressor failure.

1. If the A/C compressor is marginally operable, run the engine at idle speed, and let the air conditioning work for a few minutes, then shut the engine off.
2. Recover the refrigerant with a recovery/recycling/ charging station (see **REFRIGERANT RECOVERY**).
3. Remove the drive belt (see **DRIVE BELT INSPECTION**).
4. Remove the front splash shield (see **SPLASH SHIELD REPLACEMENT**).
5. Remove the front undercover (see **FRONT UNDERCOVER REPLACEMENT**).
6. Support the front subframe with the engine support. Remove the bolts and the front subframe stiffener (A).

NOTE: Install the new front subframe mounting bolt(B).

Fig. 207: Identifying Front Subframe Stiffener And Mounting Bolts With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the A/C compressor clutch connector (A). Remove the bolts and the nut, then disconnect the suction hose (B) and discharge hose (C) from the A/C compressor. Plug or cap the lines immediately after disconnecting them to avoid moisture and dust contamination.

Fig. 208: Identifying A/C Compressor Clutch Connector, Suction Hose And Discharge Hose With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the mounting bolts and the A/C compressor (A). Be careful not to damage the radiator fins when removing the compressor.

Fig. 209: Identifying Mounting Bolts And A/C Compressor With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the A/C compressor in the reverse order of removal, and note these items:
- Inspect the A/C lines for any signs of contamination.
 - If you're installing a new A/C compressor, you must calculate the amount of refrigerant oil to be removed from it (see **A/C REFRIGERANT OIL REPLACEMENT**). A new A/C compressor comes with a full charge of oil.
 - Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.
 - Use refrigerant oil (DENSO ND-OIL 8) for HFC-134a DENSO piston type A/C compressor only.
 - To avoid contamination, do not return the oil to the container once dispensed, and never mix it with other refrigerant oils.
 - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
 - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts the paint, wash it off immediately.
 - Be careful not to damage the radiator fins when installing the compressor and the A/C condenser fan shroud.
 - Charge the system (see **SYSTEM CHARGING**).

A/C COMPRESSOR CLUTCH CHECK

1. Check the pressure plate for discoloration, peeling, or other damage. If there is damage, replace the clutch set (see **A/C COMPRESSOR CLUTCH OVERHAUL**).

2. Check the pulley bearing play and drag by rotating the pulley by hand. Replace the clutch set with a new one if it is noisy or has excessive play/drag (see A/C COMPRESSOR CLUTCH OVERHAUL).

Fig. 210: Identifying Bearing Play

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the clearance between the pulley (A) and the pressure plate (B) all the way around. If the clearance is not within specified limits, remove the pressure plate (see A/C COMPRESSOR CLUTCH OVERHAUL) and add or remove shims as needed to increase or decrease clearance.

Clearance: 0.30-0.60 mm (0.012-0.024 in.)

NOTE: The shims are available in three thicknesses: 0.1 mm, 0.3 mm, and 0.5 mm.

Fig. 211: Measuring Clearance Between Pulley And Pressure Plate

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the resistance of the field coil. If the resistance is not within specifications, replace the field coil (see A/C COMPRESSOR CLUTCH OVERHAUL).

Field Coil Resistance: 3.9—4.3 Ω at
68° F (20 °C)

Fig. 212: Measuring Resistance Of Field Coil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/C COMPRESSOR CLUTCH OVERHAUL

Special Tools Required

A/C clutch holder, Robin air 10204 or Kent-Moore J37872, or Honda Tool and Equipment KMT-J33939, commercially available

1. Remove the center bolt while holding the pressure plate (A) with a commercially available A/C clutch holder (B).

Fig. 213: Identifying Center Bolt While Holding Pressure Plate With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the pressure plate (A) and shim(s) (B), taking care not to lose the shim(s). If the clutch needs adjustment, increase or decrease the number and thickness of shims as necessary, then reinstall the pressure plate, and recheck its clearance (see **A/C COMPRESSOR CLUTCH CHECK**).

NOTE: The shims are available in three thicknesses: 0.1 mm, 0.3 mm, and 0.5 mm.

Fig. 214: Identifying Pressure Plate And Shim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If you are replacing the field coil, remove the snap ring (A) with snap ring pliers, then remove the pulley (B). Be careful not to damage the pulley or the A/C compressor.

Fig. 215: Identifying Snap Ring And Pulley
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screw from the field coil ground terminal (A) and bracket (B). Disconnect the connector (C) from the field coil, then remove the wire harness clip (D). Remove the snap ring (E) with snap ring pliers, then remove the field coil (F). Be careful not to damage the field coil or the A/C compressor.

Fig. 216: Identifying Field Coil Ground Terminal, Bracket, Connector, Wire Harness Clip And Snap Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Reassemble the clutch in the reverse order of disassembly, and note these items:
 - Install the field coil with the wire side facing down, and align the boss on the field coil with the hole in the A/C compressor.
 - Clean the pulley and A/C compressor sliding surfaces with contact cleaner or other non-petroleum solvent.
 - Install new snap rings, note the installation direction, and make sure they are fully seated in the groove.
 - Make sure that the pulley turns smoothly after it's reassembled.
 - Route and clamp the wires properly or they can be damaged by the pulley.

A/C COMPRESSOR RELIEF VALVE REPLACEMENT

1. Recover the refrigerant with a recovery/recycling/ charging station (see **REFRIGERANT RECOVERY**).
2. Remove the front splash shield (see **SPLASH SHIELD REPLACEMENT**).
3. Remove the front undercover (see **FRONT UNDERCOVER REPLACEMENT**).
4. Remove the relief valve (A) and the O-ring (B). Plug the opening to keep foreign matter from entering the system and the A/C compressor oil from running out.

Fig. 217: Identifying Relief Valve And O-Ring With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Clean the mating surfaces.
6. Replace the O-ring with a new one at the relief valve, and apply a thin coat of refrigerant oil before installing it.
7. Remove the plug, and install and tighten the relief valve.
8. Charge the system (see **SYSTEM CHARGING**).

A/C CONDENSER REPLACEMENT

1. Recover the refrigerant with a recovery/recycling charging station (see **REFRIGERANT RECOVERY**).
2. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
3. Remove the bolt, then disconnect the discharge hose (A) from the A/C condenser.

Fig. 218: Identifying A/C Condenser Discharge Hose Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt, then disconnect the front receiver line (A) from the A/C condenser.

Fig. 219: Identifying A/C Condenser Front Receiver Line With Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the bolts, nut, and the ATF cooler bracket (A).

Fig. 220: Identifying ATF Cooler Bracket Nut And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Loosen the bolts, then remove the A/C condenser upper mount brackets (A).

Fig. 221: Identifying A/C Condenser Upper Mount Brackets Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the hood latch (see **HOOD LATCH REPLACEMENT**).
8. Remove the A/C condenser (A) by lifting it up. Be careful not to damage the radiator and A/C condenser fins when removing the A/C condenser.

Fig. 222: Identifying A/C Condenser
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the A/C condenser in the reverse order of removal, and note these items:
 - If you're installing a new A/C condenser, add refrigerant oil (DENSO ND-OIL 8) (see **A/C REFRIGERANT OIL REPLACEMENT**).
 - Replace the O-rings with new ones at each fitting, and apply a thin coat of refrigerant oil before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.
 - Immediately after using the oil, reinstall the cap on the container, and seal it to avoid moisture absorption.
 - Do not spill the refrigerant oil on the vehicle; it may damage the paint; if the refrigerant oil contacts

the paint, wash it off immediately.

- Be careful not to damage the radiator or the A/C condenser fins when installing the A/C condenser.
- Charge the system (see **SYSTEM CHARGING**).
- Adjust the hood latch (see **HOOD ADJUSTMENT**).

RECEIVER/DRYER DESICCANT REPLACEMENT

NOTE: Install the receiver/dryer as quickly as possible to prevent the system from absorbing moisture from the air.

1. Remove the A/C condenser (see **A/C CONDENSER REPLACEMENT**).
2. Remove the cap (A) from the bottom of the A/C condenser. Remove the O-ring (B) and the desiccant (C).

Fig. 223: Identifying A/C Condenser Cap, O-Ring And Desiccant With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the receiver/dryer in the reverse order of removal, and note these items:
 - Replace the O-rings with new ones, and apply a thin coat of refrigerant oil (DENSO ND-OIL 8) before installing them. Be sure to use the correct O-rings for HFC-134a (R-134a) to avoid leakage.
 - Install the cap to the specified torque. It is made of resin and can be easily stripped.

REFRIGERANT RECOVERY

- CAUTION:**
- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
 - Be careful when connecting service equipment.
 - Do not breathe refrigerant or vapor.

NOTE: If accidental system discharge occurs, ventilate the work area before

resuming service.

- Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

1. Connect an R-134a refrigerant recovery/recycling/ charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 224: Connecting R-134A Refrigerant Recovery/Recycling/ Charging Station To High And Low Pressure Service Port

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Measure the amount of refrigerant oil removed from the A/C system after the recovery process is completed. Be sure to put the same amount of new refrigerant oil back into the A/C system before charging.

SYSTEM EVACUATION

CAUTION:

- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
- Be careful when connecting service equipment.
- Do not breathe refrigerant or vapor.

NOTE:

- If accidental system discharge occurs, ventilate the work area before resuming service.
 - Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.
1. When an A/C System has been opened to the atmosphere, such as during installation or repair, it must be evacuated using an R-134a refrigerant recovery/recycling/charging station. If the system has been open for several days, the receiver/dryer should be replaced, and the system should be evacuated for several hours.
 2. Connect an R-134a refrigerant recovery/recycling/ charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions. Evacuate the system.

Fig. 225: Connecting R-134A Refrigerant Recovery/Recycling/ Charging Station To High And Low Pressure Service Port

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the low-pressure does not reach more than 93.3 kPa (700 mmHg, 27.6 in.Hg) in 15 minutes, there is probably a leak in the system. Partially charge the system, and check for leaks (see step 3 on **REFRIGERANT LEAK TEST**).

SYSTEM CHARGING

CAUTION:

- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.

- Be careful when connecting service equipment.
- Do not breathe refrigerant or vapor.

NOTE:

- If accidental system discharge occurs, ventilate the work area before resuming service.
- Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

1. Connect an R-134a refrigerant recovery/recycling/ charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 226: Connecting R-134A Refrigerant Recovery/Recycling/ Charging Station To High And Low Pressure Service Port

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Evacuate the system (see **SYSTEM EVACUATION**).
3. Add the same amount of new refrigerant oil to the system that was removed during recovery. Use only DENSO ND-OIL 8 refrigerant oil.
4. Charge the system with the specified amount of R-134a refrigerant. Do not overcharge the system; the A/C compressor will be damaged.

Select the appropriate units of measure for your refrigerant charging station.

Refrigerant Capacity:**600 to 650 g****0.60 to 0.65 kg****1.32 to 1.43 lbs****21.2 to 22.9 oz**

5. Check for refrigerant leaks (see **REFRIGERANT LEAK TEST**).
6. Check the system performance (see **A/C SYSTEM TEST**).

REFRIGERANT LEAK TEST**SPECIAL TOOLS REQUIRED**

Leak detector, Honda Tool and Equipment YGK-H-10PM or commercially available

- CAUTION:**
- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
 - Be careful when connecting service equipment.
 - Do not breathe refrigerant or vapor.

- NOTE:**
- If accidental system discharge occurs, ventilate the work area before resuming service.
 - Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

1. Connect an R-134a refrigerant recovery/recycling/ charging station (A) to the high-pressure service port (B) and the low-pressure service port (C), as shown, following the equipment manufacturer's instructions.

Fig. 227: Connecting R-134A Refrigerant Recovery/Recycling/ Charging Station To High And Low Pressure Service Port

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Open the high pressure valve to charge the system to the specified capacity, then close the supply valve, and disconnect the charging station fittings.

Select the appropriate units of measurement for your refrigerant charging station.

Refrigerant Capacity:

600 to 650 g

0.60 to 0.65 kg

1.32 to 1.43 lbs

21.2 to 22.9 oz

3. Check the system for leaks using an R-134a refrigerant leak detector with an accuracy of 14 g (0.5 oz) per year or better.
4. If you find leaks that require the system to be opened (to repair or replace hoses, fittings, etc.), do the refrigerant recovery.
5. After checking and repairing leaks, the system must be evacuated.

A/C SYSTEM TEST

PERFORMANCE TEST

CAUTION:

- Air conditioning refrigerant or lubricant vapor can irritate your eyes, nose, or throat.
- Be careful when connecting service equipment.
- Do not breathe refrigerant or vapor.

The performance test will help determine if the A/C system is operating within specifications.

NOTE:

- If accidental system discharge occurs, ventilate the work area before resuming service.
- Additional health and safety information may be obtained from the refrigerant and lubricant manufacturers.

1. Connect an R-134a refrigerant recovery/recycling/ charging station to the high-pressure service port and the low-pressure service port, following the equipment manufacturer's instructions.
2. Determine the relative humidity and air temperature.
3. Open the glove box. Remove the glove box stop on right side, then let the glove box hang down (see **GLOVE BOX REMOVAL/INSTALLATION**).
4. Insert a thermometer (A) in the center vent.

Fig. 228: Identifying Thermometer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Place a thermometer (B) near the blower unit's recirculation inlet duct.
6. Test conditions:
 - Avoid direct sunlight.
 - Open hood.
 - Open front doors.

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

- Set the temperature control switch to Max Cool, the mode control switch to Vent, and the recirculation control switch to Recirculate.
 - Turn the A/C switch ON and the fan switch to Max.
 - Run the engine at 1,500 rpm.
 - No driver or passengers in vehicle.
7. After running the air conditioning for 10 minutes under the above test conditions, read the delivery temperature from the thermometer in the center vent, the intake temperature near the blower unit, and the discharge (high) and suction (low) pressures on the A/C gauges.
8. To complete the vent (delivery)/ambient air (intake) temperature chart:
- Mark the vent (delivery) temperature on the vertical line.
 - Mark the ambient air (intake) temperature on the bottom line.
 - Draw a vertical line from the ambient air (intake) temperature mark.
 - Draw a horizontal line from the vent (delivery) temperature mark until it intersects the vertical line.

NOTE: The vent temperature and ambient air temperature should intersect in the shaded area. Any measurements outside the area may indicate the need for further inspection.

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

Fig. 229: Ambient (Intake) Temperature Vs Vent (Delivery) Temperature Graph

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. To complete the high side (discharge) pressure/ambient air (intake) temperature chart:
 - Mark the high side (discharge) pressure on the vertical line.
 - Mark the ambient air (intake) temperature on the bottom line.
 - Draw a vertical line from the ambient air (intake) temperature mark.
 - Draw a horizontal line from the high side (discharge) pressure mark until it intersects the vertical line.

NOTE: The high side pressure and ambient air temperature should intersect in the shaded area. Any measurements outside the area may indicate the need for further inspection.

Fig. 230: Ambient (Intake) Temperature Vs High Side (Discharge) Pressure Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. To complete the low side (suction) pressure/ambient air (intake) temperature chart:

- Mark the low side (suction) pressure along the vertical line.
- Mark the ambient air (intake) temperature along the bottom line.

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

- Draw a vertical line from the ambient air (intake) temperature mark.
- Draw a horizontal line from the low side (suction) pressure mark until it intersects the vertical line.

NOTE: The low side pressure and ambient air temperature should intersect in the shaded area. Any measurements outside the area may indicate the need for further inspection.

Fig. 231: Ambient (Intake) Temperature Vs Low Side (Suction) Pressure Graph

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

PRESSURE TEST

PRESSURE TEST REFERENCE CHART

Test results	Related symptoms	Probable cause	Remedy
Discharge (high) pressure abnormally high	After stopping A/C compressor, pressure drops about 196 kPa (2.0 kgf/cm ² , 28 psi) quickly, and then falls gradually.	Air in system	Recover, evacuate (see <u>REFRIGERANT RECOVERY</u>), and recharge with specified amount (see <u>SYSTEM CHARGING</u>).
	Reduced or no airflow through A/C condenser.	• Clogged condenser or radiator fins • A/C condenser or radiator fan not working properly	• Clean. • Check voltage and fan rpm. • Check fan direction.
	Line to A/C condenser is excessively hot.	Restricted flow of refrigerant in system	Restricted lines.
Discharge pressure abnormally low	High and low-pressures are balanced soon after stopping A/C compressor. Low side is higher than normal.	• Faulty A/C compressor discharge valve • Faulty A/C compressor seal	Replace the A/C compressor.
	Outlet of expansion valve is not frosted, low-pressure gauge indicates vacuum.	• Faulty expansion valve • Moisture in system	• Replace. • Recover, evacuate, and recharge with specified amount.
Suction (low) pressure abnormally low	Expansion valve is not frosted, and low-pressure line is not cold. Low-pressure gauge indicates vacuum.	• Frozen expansion valve (Moisture in system) • Faulty expansion valve	• Recover, evacuate, and recharge with specified amount. • Replace the expansion valve.
	Discharge temperature is low, and the airflow from vents is restricted.	Frozen evaporator	Run the fan with A/C compressor off, then check evaporator temperature sensor.
	Expansion valve is frosted.	Clogged expansion valve	Clean or replace.
	Receiver/dryer outlet is cool, and inlet is warm (should be warm during operation).	Clogged receiver/dryer	Replace.
	Low-pressure hose and service port are cooler than	Expansion valve open	Repair or replace.

2008 Acura MDX

2007-09 HVAC Climate Control - MDX

	the temperature around evaporator.	too long	
	Suction pressure is lowered when A/C condenser is cooled by water.	Excessive refrigerant in system	Recover, evacuate, and recharge with specified amount.
Suction pressure abnormally high	High and low-pressures are equalized as soon as the A/C compressor is stopped, and both gauges fluctuate while running.	- Faulty gasket - Faulty high-pressure valve - Foreign particle stuck in high-pressure valve	Replace the A/C compressor.
Suction and discharge pressures abnormally high	Reduced airflow through A/C condenser.	- Clogged A/C condenser or radiator fins - A/C condenser or radiator fan not working properly	- Clean. - Check voltage and fan rpm. - Check fan direction.
Suction and discharge pressures abnormally low	Low-pressure hose and metal fittings are cooler than evaporator.	Clogged or kinked low-pressure hose parts	Repair or replace.
	Temperature around expansion valve is too low compared with that around receiver/dryer.	Clogged high-pressure line	Repair or replace.
Refrigerant leaks	A/C compressor clutch is dirty.	A/C compressor shaft seal leaking	Replace the A/C compressor.
	A/C compressor bolt(s) are dirty.	Leaking around bolt(s)	Tighten bolt(s) or replace A/C compressor.
	A/C compressor gasket is wet with oil.	Gasket leaking	Replace the A/C compressor.
	A/C fitting is dirty.	Leaking O-ring	Clean the A/C fitting and replace the O-ring.

2007-09 ACCESSORIES AND EQUIPMENT

Clock-MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Clock Component Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM DESCRIPTION

CLOCK OPERATION

The clock shows day, date, and time information on the center information display. If the clock display does not appear normal, use the self-diagnosis function to test it.

Self-diagnosis function Mode 1 and Mode 2 force all possible segments on. If any of the segments do not appear as illustrated, the clock is faulty. Mode 3 forces all segments off. If there are any segments appearing, the clock is faulty.

If the clock is faulty, replace the center information display (see **CENTER INFORMATION DISPLAY INPUT TEST**).

Self-diagnosis Function

1. Press and hold the "SET" button, the arrow down button, and the arrow up button, then turn the ignition

switch to ON (II).

2. Release all buttons after one second.
3. Within 3 seconds, press and release the "SET" button, press and release the arrow down button, and finally press and release the arrow up button.
4. The self-diagnosis function begins with a blank display. Press and release the arrow up button to scroll through the three modes.

Fig. 2: Identifying Self-Diagnosis Function Code
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Press the "SET" button to exit the self-diagnosis function.

Consoles - MDX

CENTER CONSOLE REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX) and the precautions and procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or service.

NOTE:

- Put on gloves to protect your hands.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the front seat, dashboard, and related parts.

1. Do the battery terminal disconnection procedure, and wait at least 3 minutes before beginning work.
2. Remove these items:
 - Driver's inner dashboard trim (see DRIVER'S INNER DASHBOARD TRIM REMOVAL/INSTALLATION)
 - Passenger's dashboard trim (see PASSENGER'S DASHBOARD TRIM REMOVAL/INSTALLATION)
 - Console rear trim (see CENTER CONSOLE REAR TRIM REMOVAL/ INSTALLATION)
 - Front seats, both sides (see FRONT SEAT REMOVAL/INSTALLATION)
3. Detach the clips by pulling the console lower trim (A) back by hand, then remove it.

Fastener Locations

▷ : Clip, 2

Fig. 1: Identifying Console Lower Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Detach the clips (A, B) by pulling the driver's center console trim (C), then remove it.

Fastener Locations

A ▷ : Clip, 8 B ▷ : Clip, 2

Fig. 2: Identifying Clips And Driver's Center Console Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clips (A, B) by pulling the passenger's center console trim (C) out, and pull it forward to release its pin (D) from the center console, then remove it.

Fastener Locations

A ▷ : Clip, 5 B ▷ : Clip, 2

Fig. 3: Identifying Clips, Passenger's Center Console Trim And Pin

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. From driver's side, disconnect the parking pin shift connector (A) and shift lock solenoid connector (B). Remove the rear blower motor relay mounting bolt (C), second row seat heater relay mounting bolt (D) (for some models), and ground bolt (E).

Fastener Locations

C ► : Bolt, 1 D ► : Bolt, 1 E ► : Bolt, 1

Fig. 4: Identifying Parking Pin Shift Connector, Shift Lock Solenoid Connector, Rear Blower Motor Relay Mounting Bolt And Ground Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. From passenger's side, disconnect the console subharness connector (A).

Fig. 5: Identifying Console Subharness Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the HandsFreeLink control unit connector (A), and detach the harness clips (B).

Fig. 6: Identifying Handsfreelink Control Unit Connector And Harness Clips
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Open the beverage holder lid. Pull the beverage holder inner case (A) up by hand to detach the clips, then remove it.

Fastener Locations

▷ : Clip, 2

Fig. 7: Identifying Beverage Holder Inner Case
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Shift the shift lever into the R position, then disconnect the A/T shift cable (see step 5 on **SHIFT CABLE REPLACEMENT**).
11. Pull back the carpet (A) as needed, then remove the bolts (B, C) securing the center console (D).

Fastener Locations

B ▶ : Bolt, 2 C ▶ : Bolt, 2

Fig. 8: Identifying Carpet, Bolts And Center Console With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pull back the carpet (A) as needed. Slide the center console (B) backward to detach the clips and pins (C) from the dashboard, lift the console up, then carefully remove it.

Fastener Locations

▶ : Clip, 6

Fig. 9: Identifying Carpet, Center Console And Pins
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the console in the reverse order of removal, and note these items:
- If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.
 - Before tightening the bolts, make sure the dashboard wire harness is not pinched.

- Make sure the connectors are plugged in properly.
- DO the battery terminal reconnection procedure(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**)
- Check for any DTCs that may have been set during repairs, and clear them.
- If necessary, adjust the shift cable (see **SHIFT CABLE ADJUSTMENT**).

CENTER CONSOLE REAR TRIM REMOVAL/ INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the center console and related parts.

1. Starting at the top, gently pull out the console rear trim (A) to detach the clips (B), then pullout the trim to detach the remaining clips (C), and to release the lower tabs (D), disconnect the connectors, then remove the trim:
 - Rear heater-A/C passenger's control panel-unit connector (E)
 - With second row seat heater: Second row seat heater switch connectors (F)
 - Without rear entertainment system: Accessory power socket connector (G)
 - With rear entertainment system: Auxiliary jack connector (G)

Fastener Locations

B, C ▷ : Clip, 7

Fig. 10: Identifying Accessory Power Socket Connector, Clips And Lower Tabs
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the trim in the reverse order of removal, and note these items:
 - Make sure all connectors are plugged in properly.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

CENTER CONSOLE REAR TRIM DISASSEMBLY/REASSEMBLY

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the trim.

1. Remove the center console rear trim (see CENTER CONSOLE REAR TRIM DISASSEMBLY/REASSEMBLY).
2. Remove the screws, then remove the center console duct (A).

Fastener Locations

► : Screw, 4

Fig. 11: Identifying Center Console Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws and release the hooks (A), then remove the HVAC trim (B).

Fastener Locations

► : Screw, 2

Fig. 12: Identifying Hooks And HVAC Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screws, then remove the rear upper lid (A).

Fastener Locations

► : Screw, 2

Fig. 13: Identifying Rear Upper Lid

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the screws (A) and detach the clips (B, C), then remove the rear console vent/vent trim (D).

Fastener Locations

A ► : Screw, 2 B ▷ : Clip, 4 C ▷ : Clip, 1

Fig. 14: Identifying Screws, Clips And Rear Console Vent/Vent Trim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the screws, then remove the rear console vent (A) from the rear console vent trim (B).

Fastener Locations

► : Screw, 3

Fig. 15: Identifying Rear Console Vent And Rear Console Vent Trim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Without rear entertainment system: Remove the screws and release the hooks (A), then remove the accessory power socket panel (B).

Fastener Locations

► : Screw, 4

Fig. 16: Identifying Hooks And Accessory Power Socket Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Reassemble the rear trim in the reverse order of disassembly, and note these items:
- If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

CONSOLE ARMREST REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the console.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the center console rear trim (see **CENTER CONSOLE REAR TRIM DISASSEMBLY/REASSEMBLY**).
2. Starting at the rear, pull out the wood panel (A) to detach the clips, then remove it.

Fastener Locations

▷ : Clip, 4

Fig. 17: Identifying Wood Panel Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws, then remove the armrest (A) from the space between the console frame (B) and the console latch trim (C).

Fastener Locations

▶ : Screw, 3

Fig. 18: Identifying Armrest, Console Frame And Console Latch Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the armrest in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

CENTER CONSOLE LATCH PANEL REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the console.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the center console armrests from both sides (see CONSOLE ARMREST REMOVAL/INSTALLATION).
2. Remove the screws (A), and starting at the rear, pull out the center console latch panel (B) to detach the clips (C), then remove it.

Fig. 19: Identifying Screws, Center Console Latch Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the panel in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

CENTER CONSOLE PANEL REMOVAL/ INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the console.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the center console (see CENTER CONSOLE REMOVAL/INSTALLATION).
2. Remove the center console latch panel (see CENTER CONSOLE LATCH PANEL REMOVAL/INSTALLATION).
3. Pull the center console panel (A) out to detach the clips (B, C). Disconnect the accessory power socket connector (D) and seat heater switch connectors (E), detach the harness clip (F), then remove the panel.

Fastener Locations

B ▷ : Clip, 2 C ▷ : Clip, 7

Fig. 20: Identifying Center Console Panel, Clips And Accessory Power Socket Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the panel in the reverse order of removal, and note these items:
 - Make sure each connector is plugged in properly.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

CENTER CONSOLE PANEL POCKET REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the pocket.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the center console (see CENTER CONSOLE REMOVAL/INSTALLATION).
2. Remove the center console panel (see CENTER CONSOLE PANEL REMOVAL/INSTALLATION).
3. Remove the screws, then remove the console pocket (A) from the console panel (B).

Fig. 21: Identifying Console Pocket And Console Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screws and release the tabs (A), then remove the upper lid (B).

Fig. 22: Identifying Tabs And Upper Lid

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the arm (A) and the spring (B).

Fig. 23: Identifying Arm And Spring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the console pocket lid (A) from the console pocket (B).

Fig. 24: Identifying Console Pocket Lid And Console Pocket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the pocket in the reverse order of removal, and apply oil to entire rail area of the arm.

CENTER CONSOLE BEVERAGE HOLDER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the console.

- Use the appropriate tool from the KTC trim toll set to avoid damage when removing components.

1. Remove the center console (see CENTER CONSOLE REMOVAL/INSTALLATION).
2. Remove the console panel (see CENTER CONSOLE PANEL REMOVAL/ INSTALLATION).
3. Remove the console beverage holder (A) and passenger's console panel (B) as an assembly:
 1. Detach the console subharness connector (C).
 2. Remove the screws (D) securing the console beverage holder to the A/T gear position indicator panel (E) and console frame (F).
 3. Remove the screws (G) securing the passenger's console panel to the console frame.
 4. Pull out the passenger's console panel to detach the clips (H).

Fastener Locations

D, G ► : Screw, 4 H ► : Clip, 2

Fig. 25: Identifying Clips, Screws, A/T Gear Position Indicator Panel And Console Frame
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screws, then remove the center console beverage holder (A).

Fastener Locations

► : Screw, 2

Fig. 26: Identifying Center Console Beverage Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If necessary, separate both rails (A) from the outer case (B), then remove the shutter (C).

Fastener Locations

► : Screw, 8

Fig. 27: Identifying Rails, Outer Case And Shutter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the beverage holder in the reverse order of removal, and note these items:
- If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

CENTER CONSOLE BOX REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP20T4

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the center console.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the center console (see CENTER CONSOLE REMOVAL/INSTALLATION).
2. Remove the beverage holder and passenger's console panel as an assembly (see CENTER CONSOLE BEVERAGE HOLDER REPLACEMENT).
3. Remove the screw (A), and detach the clips (B, C) by pulling the driver's console panel (D) back, then remove it from the console frame (E).

Fig. 28: Identifying Screw, Clips, Driver's Console Panel And Console Frame
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the HandsFreeLink control unit (see CONTROL UNIT INPUT TEST/REPLACEMENT).
5. Remove the screws, disconnect the auxiliary jack connector (without rear entertainment system) or the AC power outlet connector (with rear entertainment System) (A), then remove the center console box (B) from the console frame (C).

Fastener Locations

► : Screw, 4

Fig. 29: Identifying AC Power Outlet Connector, Center Console Box And Console Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the box in the reverse order of removal, and note these items:
 - Make sure the auxiliary jack connector or the AC power outlet connector is plugged in properly.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

CENTER CONSOLE SIDE POCKET REPLACEMENT

1. Remove the passenger's center console trim (see step 6 on **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Remove the screws, then remove the console side pocket (A) from the passenger's center console trim (B).

Fastener Locations

► : Screw, 7

Fig. 30: Identifying Console Side Pocket And Passenger's Center Console Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Separate the box (A) and rail (B), then slide the console side lid (C) out.

Fastener Locations

► : Screw, 5

Fig. 31: Identifying Box, Rail And Console Side Lid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the pocket in the reverse order of removal.

2008 Acura MDX

2007-09 ENGINE Fan Controls - MDX

2007-09 ENGINE

Fan Controls - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Fan Controls Component Location
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING CHART

Symptom	Diagnostic Procedure	Also check for
Engine overheats	1. Check the coolant level. 2. Check for engine coolant leaks (from gaskets, hoses, O-rings, etc.). 3. Check for dirt, leaves, or insects on the radiator and condenser. 4. Check for deteriorated coolant. 5. Check for a damaged or deformed fan shroud. 6. Inspect the fan motors (see FAN MOTOR TEST) or fan relays (see POWER RELAY TEST). 7. Check the radiator cap (see RADIATOR CAP TEST). 8. Check the thermostat (see FAN MOTOR TEST). 9. Inspect the water pump (see WATER PUMP INSPECTION). 10. Check for clogged or deteriorated radiator hoses. 11. Check for a clogged heater core or hoses. 12. Check for a damaged cylinder head gasket.	
The radiator fan runs at low speed, but it does not run at high speed when the engine coolant temperature is above 206°F (97°C)	Radiator fan high speed circuit troubleshooting (see RADIATOR FAN HIGH SPEED CIRCUIT TROUBLESHOOTING).	Cleanliness and tightness of all connectors
With the A/C off and the engine coolant temperature at 206°F (97°C) or below, the A/C condenser fan runs at high speed and the radiator fan does not run. When the engine coolant temperature is above 206°F (97°C), both fans run at high speed	Remove the fan control relay, and test. • If the relay is faulty, replace it. • If the relay is OK, check for a short in the wire between fan control relay 5P socket terminal No. 1 and condenser fan motor 2P connector terminal No. 1.	Cleanliness and tightness of all connectors
The radiator fan runs at high speed with the ignition switch ON (II), the A/C off,	Check for a short in the wire between radiator	Cleanliness and tightness

2008 Acura MDX

2007-09 ENGINE Fan Controls - MDX

and the engine coolant temperature below 204°F (95°C)	fan relay 4P socket terminal No. 3 and PCM connector terminal A5.	of all connectors
Both the radiator fan and the A/C condenser fan run at low speed with the ignition switch ON (II) and the A/C off	Check for a short in the wire between A/C condenser fan relay 4P socket terminal No. 3 and PCM connector terminal A4.	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan do not run at low speed with the A/C on	Radiator and A/C condenser fans low speed circuit troubleshooting (see <u>RADIATOR AND A/C CONDENSER FAN LOW SPEED CIRCUIT TROUBLESHOOTING</u>).	Cleanliness and tightness of all connectors
The A/C condenser fan does not run at all. The radiator fan does not run at low speed, but it runs at high speed	A/C condenser fans high speed circuit troubleshooting (see <u>A/C CONDENSER FAN HIGH SPEED CIRCUIT TROUBLESHOOTING</u>).	Cleanliness and tightness of all connectors
Both the radiator fan and the A/C condenser fan do not run at high speed when the engine coolant temperature is above 206°F (97°C)	Check for an open in the wire between radiator fan relay 4P socket terminal No. 3 and PCM connector terminal A5.	Cleanliness and tightness of all connectors

CIRCUIT DIAGRAM

Are the fuses OK?

YES - Go to step 2.

NO - Replace the fuse(s) and recheck.

2. Remove the radiator fan relay from the under-hood fuse/relay box and test it (see **POWER RELAY TEST**).

Is the relay OK?

YES - Go to step 3.

NO - Replace the radiator fan relay.

3. Measure the voltage between radiator fan relay 4P socket terminal No. 1 and body ground.

RADIATOR FAN RELAY 4P SOCKET

Terminal side of female terminals

Fig. 3: Identifying Voltage Between Radiator Fan Relay 4P Socket Terminal No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 4.

NO - Repair open in the RED wire between radiator fan relay 4P socket terminal No. 1 and the No. 3 fuse in the main under-hood fuse box.

4. Connect radiator fan relay 4P socket terminals No. 1 and No. 2 with a jumper wire.

RADIATOR FAN RELAY 4P SOCKET

Terminal side of female terminals

Fig. 4: Identifying Radiator Fan Relay 4P Socket Terminals No.1 And No.2 With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the radiator fan run at high speed?

YES - Go to step 5.

NO - Repair open in the BRN wire between radiator fan relay 4P socket terminal No. 2 and radiator fan motor 2P connector terminal No. 2.

5. Turn the ignition switch to ON (II).
6. Measure the voltage between radiator fan relay 4P socket terminal No. 4 and body ground.

RADIATOR FAN RELAY 4P SOCKET

Fig. 5: Identifying Voltage Between Radiator Fan Relay 4P Socket Terminal No. 4 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair open in the PUR wire between radiator fan relay 4P socket terminal No. 3 and the powertrain control module (PCM) (A5).

NO - Repair open in the PUR wire between radiator fan relay 4P socket terminal No. 4 and the under-hood fuse/relay box.

2008 Acura MDX

2007-09 ENGINE Cooling System - MDX

2007-09 ENGINE

Cooling System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Cooling System Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RADIATOR CAP TEST

1. Remove the radiator cap (A). Wet its seal with engine coolant, then install it on a commercially available pressure tester (B).

Fig. 2: Identifying Pressure Tester To Radiator Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply a pressure of 93-123 kPa (0.95-1.25 kgf/cm² , 14-18 psi).
3. Check for a drop in pressure.
4. If the pressure drops, replace the cap.

RADIATOR TEST

1. Wait until the engine is cool, then carefully remove the radiator cap, and fill the radiator with engine coolant to the top of the filler neck.
2. Attach a commercially available pressure tester (A) to the radiator, and apply a pressure of 93-123 kPa (0.95-1.25 kgf/cm² , 14-18 psi).

Fig. 3: Attaching Commercially Available Pressure Tester To Radiator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect for engine coolant leaks and a drop in pressure.
4. Remove the tester, then reinstall the radiator cap.

FAN MOTOR TEST

1. Disconnect the 2P connectors from the radiator fan motor (A) and condenser fan motor (B).

Fig. 4: Identifying Radiator Fan Motor And Condenser Fan Motor 2P Connectors Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Test each motor by connecting battery power to No. 2 terminal and ground to No. 1 terminal.
3. If either motor fails to run or does not run smoothly, replace it (see **RADIATOR AND FAN REPLACEMENT**).

THERMOSTAT TEST

Replace the thermostat if it is stuck open at room temperature.

To test a closed thermostat:

1. Suspend the thermostat (A) in a container of water. Do not let the thermometer (B) touch the bottom of the hot container.

Fig. 5: Suspending Thermostat In Container Of Water
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Heat the water and check the temperature with a thermometer. Note the temperature when the thermostat first opens, then check the temperature when the thermostat is fully open.
3. Measure the lift height of the thermostat when it is fully open.

Standard Thermostat

Lift Height: Above 10.0 mm (0.39 in.)

Starts Opening: 169-176°F (76-80°C)

Fully Open: 194°F (90°C)

WATER PUMP INSPECTION

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Turn the water pump pulley counterclockwise, and make sure that it turns freely. If it doesn't, replace the water pump (see **WATER PUMP REPLACEMENT**).

NOTE: When you check the water pump, you may see a small amount of "weeping" from the bleed holes (A). This is normal.

Fig. 6: Identifying Water Pump Pulley Counterclockwise
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the timing belt (see **TIMING BELT INSTALLATION**).

WATER PUMP REPLACEMENT

1. Drain the engine coolant (see **COOLANT REPLACEMENT**).
2. Remove the timing belt (see **TIMING BELT REMOVAL**).
3. Remove the timing belt adjuster (see **TIMING BELT ADJUSTER REPLACEMENT**).
4. Remove the water pump (A) by removing the five bolts.

Fig. 7: Identifying Water Pump And O-Ring With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Inspect and clean the O-ring groove and the mating surface of the engine block.
6. Install the water pump with a new O-ring (B) in the reverse order of removal.

7. Clean up any spilled engine coolant.
8. Install the timing belt adjuster (see **TIMING BELT ADJUSTER REPLACEMENT**).
9. Install the timing belt (see **TIMING BELT INSTALLATION**).
10. Refill the radiator with engine coolant, then bleed the air from the cooling system (see step 10 on **COOLANT REPLACEMENT**).

COOLANT CHECK

1. Look at the coolant level in the coolant reservoir. Make sure it is between the MAX mark (A) and MIN mark (B).

Fig. 8: Identifying Coolant Reservoir Level MAX Mark And MIN Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the coolant level in the coolant reservoir is at or below the MIN mark, add coolant to bring it between the MIN and MAX marks, then inspect the cooling system for leaks.

COOLANT REPLACEMENT

1. Start the engine. Set the heater temperature control dial to maximum heat, then turn off the ignition switch. Make sure the engine and radiator are cool to the touch.
2. Remove the radiator cap.
3. Remove the splash shield (see step 31 on **ENGINE REMOVAL**).
4. Loosen the drain plug (A) and drain the coolant.

Fig. 9: Identifying Drain Plug

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install a rubber hose (A) on the drain bolt (B) located at the rear of the engine block, then loosen the drain bolt.

Fig. 10: Identifying Rubber Hose And Drain Bolt With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. When the coolant stops draining, tighten the drain bolt. Remove the rubber hose.
7. Tighten the radiator drain plug securely.
8. Install the splash shield (see step 39 on ENGINE INSTALLATION).
9. Remove, drain, and reinstall the coolant reservoir.
10. Fill the coolant reservoir to the MAX mark (A) with Acura Long Life Antifreeze/Coolant Type 2 (P/N OL999-9011 A).

NOTE:

- Always use Acura Long Life Antifreeze/Coolant Type 2 (P/N OL999-9011 A). Using a non-Acura coolant can result in corrosion, causing the cooling system to malfunction or fail.
- Acura Long Life Antifreeze/Coolant Type 2 is a mixture of 50%

antifreeze and 50% water. Do not add water.

Fig. 11: Identifying MAX Mark On Coolant Reservoir
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Pour Acura Long Life Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck.

Engine Coolant Capacities (Including the coolant reservoir capacity of 0.7 L (0.19 US gal)):

At Coolant Change: 7.3 L (1.93 US gal)

After Engine Overhaul: 9.2 L (2.43 US gal)

Fig. 12: Pouring Acura Long Life Antifreeze/Coolant Into Radiator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Start the engine. Hold the engine speed at 1,500 rpm until it warms up (the radiator fan comes on at least twice). Make sure the thermostat is open.
13. Turn off the engine. Check the level in the radiator, and add Acura Long Life Antifreeze/Coolant Type 2, if needed.
14. Set the climate control or heater control panel to maximum cool. Start the engine. Hold the engine speed at 1,500 rpm for 5 minutes, then turn off the engine.

15. Check the level in the radiator, and add Acura Long Life Antifreeze/Coolant Type 2, if needed.
16. Set the climate control or heater control panel to maximum heat. Start the engine. Hold the engine speed at 1,500 rpm for 5 minutes, then turn off the engine.
17. Check the level in the radiator, and add Acura Long Life Antifreeze/Coolant Type 2, if needed.
18. Set the climate control or heater control panel to maximum cool. Start the engine. Hold the engine speed at 1,500 rpm for 3 minutes, then turn off the engine.
19. Check the level in the radiator, and add Acura Long Life Antifreeze/Coolant Type 2, if needed.
20. Set the climate control or heater control panel to maximum heat. Start the engine. Hold the engine speed at 1,500 rpm for 3 minutes, then turn off the engine.
21. Check the level in the radiator, and add Acura Long Life Antifreeze/Coolant Type 2, if needed.
22. Repeat steps 18 through 21 until the coolant level does not change in the radiator, then install the radiator cap loosely.
23. Set the climate control or heater control panel to maximum cool. Start the engine. Hold the engine speed at 2,500 rpm for 1 minute.
24. Set the climate control or heater control panel to maximum heat, and select high speed heat mode on the rear control panel. Measure the temperature of the air from the rear floor vent for 2 or 3 minutes. Make sure the temperature is above the standard line of the graph as shown. If the temperature is below the standard line, repeat steps 18 through 21 several more times. Then loosely install the radiator cap and recheck.

Fig. 13: Temperature Graph

Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. With the engine idling, make sure you do not hear the sound of water flowing near the rear heater unit. If you hear water flowing, repeat steps 18 through [21](#) several more times.
26. Install the radiator cap fully.
27. Fill the coolant reservoir with Acura Long Life Antifreeze/Coolant Type 2 up to the MAX mark on the coolant reservoir, then add an extra 0.4 L (0.11 US gal) coolant.
28. Clean up any spilled engine coolant.

2008 Acura MDX

2007-09 ENGINE Cooling System - MDX

29. If the maintenance minder required to replace the engine coolant, reset the maintenance minder (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**), and this procedure is complete. If the maintenance minder did not require to replace the engine coolant, go to step 30.
30. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
31. Turn the ignition switch ON (II).
32. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). If it doesn't communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
33. Select BODY ELECTRICAL with the HDS.
34. Select ADJUSTMENT in the GAUGES MENU with the HDS.
35. Select RESET in the MAINTENANCE MINDER with the HDS.
36. Select MAINTENANCE SUB ITEM 5 RESET with the HDS.
37. Turn off the engine. Check the level in the radiator, and add Acura Long Life Antifreeze/Coolant Type 2, if needed.

NOTE: **Removing the radiator cap while the engine is hot can cause the coolant to spray out. Always let the engine and radiator cool before removing the cap.**

THERMOSTAT REPLACEMENT

1. Do the battery terminal disconnection procedure(See **DISCONNECTION** . Remove the battery (See **REMOVAL** .
2. Remove the air intake duct (see step 8 on **REMOVAL**).
3. Drain the engine coolant (see **COOLANT CHECK**).
4. Remove the thermostat cover, then remove the thermostat.

Fig. 14: Identifying Thermostat Components With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the new thermostat with a new rubber seal and with the pin on the top side.
6. Install the battery(See **INSTALLATION** . Do the battery terminal reconnection procedure(See **RECONNECTION** .
7. Refill the radiator with engine coolant, then bleed air from the cooling system (see step 10 on **COOLANT REPLACEMENT**).
8. Clean up any spilled engine coolant.

WATER PASSAGE REPLACEMENT

1. Do the battery terminal disconnection procedure(See **DISCONNECTION** . Remove the battery (See **REMOVAL** .
2. Remove the air intake duct (see step 8 on **ENGINE REMOVAL**).
3. Drain the engine coolant (see **COOLANT CHECK**).
4. Remove the upper radiator hose, lower radiator hose, heater hoses, and water bypass hoses from the water passage. Disconnect the engine coolant temperature (ECT) sensor 1 connector and the exhaust gas recirculation (EGR) valve connector.
5. Remove the water passage.

Fig. 15: Identifying Water Passage Components With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the water passage in the reverse order of removal.
7. Install the battery(See **INSTALLATION**).Do the battery terminal reconnection procedure(See **RECONNECTION**).
8. Refill the radiator with engine coolant, then bleed air from the cooling system (see step 10 on **COOLANT REPLACEMENT**).
9. Clean up any spilled engine coolant.

RADIATOR AND FAN REPLACEMENT

NOTE:

- Use fender covers to avoid damaging painted surfaces.
- To avoid damaging the wire and terminals, unplug the wiring connectors carefully while holding the connector portion.
- Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact any other wiring or hoses, or interfere with any other parts.

1. Do the battery terminal disconnection procedure(See **DISCONNECTION**).
2. Remove the battery (See **REMOVAL** and battery base (see step 11 on **ENGINE REMOVAL**).
3. Remove the air cleaner assembly (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**).

4. Remove the front grille cover, then remove the front grille.

Fig. 16: Identifying Front Grille Cover With Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the fan motor connectors (A), harness clamp (B), engine coolant temperature (ECT) sensor 2 subharness connector (C) and coolant reservoir hose (D).

Fig. 17: Identifying Fan Motor Connectors, Harness Clamp, ECT Sensor Subharness Connector And Coolant Reservoir Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Drain the engine coolant (see **COOLANT CHECK**).
7. Remove the upper radiator hose.

Fig. 18: Identifying Upper Radiator Hose

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Unclamp the hose clamps (A) and remove the ATF cooler hoses (B), then plug the line and hoses.

Fig. 19: Identifying Hose Clamps, ATF Cooler Hoses, ATF Cooler Pipe Mount Bolts And ATF Cooler Pipe With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the ATF cooler pipe mount bolts (C), then remove the ATF cooler pipe (D).
10. Remove the lower radiator hose (A) and disconnect the ECT sensor 2 connector (B) and loosen the two bolts (C).

Fig. 20: Identifying Lower Radiator Hose, ECT Sensor Connector And Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Disconnect the hood latch switch connector (A), clamps (B), then remove the hood latch (C).

Fig. 21: Identifying Hood Latch Switch Connector, Clamps And Hood Latch With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the bulkhead bracket (D), and radiator and A/C condenser mount upper bracket/cushion (E), then remove the fan shroud mount bolts (F).
13. Move the fan shroud assemblies toward the engine, then pull up the radiator assembly (A).

Fig. 22: Identifying Radiator Assembly

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the fan shroud assemblies.
15. Install the radiator and fans in the reverse order of removal.
16. Install the bulkhead bracket in the reverse order of removal. Apply body paint to the bulkhead bracket mounting bolts.
17. Set the upper and lower cushions securely.
18. Fill the transmission with ATF (see **ATF REPLACEMENT**).
19. Install the battery(See **INSTALLATION** .Do the battery terminal reconnection procedure(See **RECONNECTION**).
20. Fill the radiator with engine coolant and bleed the air from the system (see step 10 on **COOLANT REPLACEMENT**).
21. Adjust the engine hood latch (see **HOOD ADJUSTMENT**).

2007-09 ACCESSORIES AND EQUIPMENT

Cruise Control - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Cruise Control Component Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX**TROUBLESHOOTING CHART**

Symptom	Diagnostic procedure	Also check for
Cruise control cannot be set	1. Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>). 2. Check the No. 11 (15 A) fuse in the main under-dash fuse/relay box, and the No. 18 (10 A) fuse in the under-dash fuse/relay box. 3. Do the cruise control input test (see <u>CRUISE CONTROL INPUT TEST</u>). 4. Do the cruise control combination switch test (see <u>CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT</u>).	
Cruise control can be set, but the cruise main indicator does not come on	1. Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>). 2. Do the gauge control module self-diagnostic function procedure (see <u>SELF-DIAGNOSTIC FUNCTION</u>). 3. Do the cruise control input test (see <u>CRUISE CONTROL INPUT TEST</u>). Test the cruise control main switch signal input.	Faulty gauge control module
Cruise control can be set, but the cruise control indicator does not come on	1. Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>). 2. Do the gauge control module self-diagnostic function (see <u>SELF-DIAGNOSTIC FUNCTION</u>). 3. Do the cruise control input test (see <u>CRUISE CONTROL INPUT TEST</u>). Test the cruise control indicator signal input.	Faulty gauge control module
	1. Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>).	

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Cruise Control - MDX

Vehicle does not decelerate or accelerate accordingly when the set/ decel or resume/accel switch is pressed	- Do the cruise control input test (see <u>CRUISE CONTROL INPUT TEST</u>). Test the cruise control set/decel, resume/accel switch signal input. - Do the cruise control combination switch test (see <u>CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT</u>).	Open circuit, loose or disconnected terminals: YEL/RED, GRY or LT GRN/BLK, YEL
Set speed does not cancel when the brake pedal is pressed	- Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>). - Do the cruise control input test (see <u>CRUISE CONTROL INPUT TEST</u>). Test the brake pedal position switch signal input. - Do the brake pedal position switch test (see <u>BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT</u>).	- Short to power on the BRN wire - Faulty brake pedal position switch
Set speed does not cancel when the cruise control main switch is turned off	- Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>). - Do the cruise control input test (see <u>CRUISE CONTROL INPUT TEST</u>). Test the cruise control main switch signal input. - Do the cruise control combination switch test (see <u>CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT</u>).	Short to power on the PNK, LT GRN wire
Set speed does not cancel when the cancel switch is pressed	- Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>). - Do the cruise control input test (see <u>CRUISE CONTROL INPUT TEST</u>). Test the cruise control cancel switch signal input. - Do the cruise control combination switch test (see <u>CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT</u>).	Open circuit, loose or disconnected terminals: YEL/RED, GRY or LT GRN/BLK, YEL
	Check for PGM-FI DTCs (see <u>GENERAL TROUBLESHOOTING INFORMATION</u>).	

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Cruise Control - MDX

Set speed will not resume when the resume/accel switch is pressed (with the cruise control main switch turned on, and set speed temporarily canceled by pressing the brake pedal)	2. Check the brake pedal position switch adjustment (see <u>BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT</u>). 3. Do the cruise control input test (see <u>CRUISE CONTROL INPUT TEST</u>). Test the cruise control resume/accel switch signal input. Test the brake pedal position switch signal input. 4. Do the cruise control combination switch test (see <u>CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT</u>).	• Faulty brake pedal position switch • Open circuit, loose or disconnected terminals: LTGRN/BLK, YEL
With the ignition switch ON (II), and the lighting switch turned on, the cruise control combination switch illumination does not come on	Do the cruise control combination switch test (see <u>CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT</u>).	

CIRCUIT DIAGRAM

Fig. 2: Cruise Control - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CRUISE CONTROL INPUT TEST

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch ON (II).

2008 Acura MDX**2007-09 ACCESSORIES AND EQUIPMENT Cruise Control - MDX**

3. Make sure the HDS communicates with the vehicle and the PCM. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Go to **PGM-FI** , and check for DTCs.
5. Do the following tests while monitoring parameters in the PGM-FI DATA LIST with the HDS.

NOTE: Intermittent failures are often caused by loose circuit connections. While monitoring cruise control inputs, flex their circuits, and note if any of the test results change.

TEST RESULTS CHART

Signal to be tested	Test condition	Parameter: Desired result	Possible cause if result is not obtained
Brake switch signal	Brake pedal pressed, then released	CRUISE BRAKE SW should indicate OFF when the brake pedal is pressed and ON when the brake pedal is released.	• Faulty brake pedal position switch • Blown No. 18 (10 A) fuse in the under-dash fuse/relay box • An open in the wire between the powertrain control module (PCM) and the brake pedal position switch • A wire shorted to ground between the PCM and the brake pedal position switch
Transmission range switch signal	Shift lever in D and D3	SHIFT/CLUTCH SW should indicate OFF in P, R and N and ON in D and D3.	• Faulty transmission range switch • An open in the wire between the PCM and the transmission range switch • A wire shorted to ground between the PCM and the transmission range switch • Poor ground G101
		CRUISE CONTROL MAIN SW	• Faulty cruise control combination switch • An open in the wire between the gauge

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Cruise Control - MDX

Cruise control main switch signal	Cruise control main switch ON and OFF	should indicate ON when the cruise control main switch is turned ON and OFF when the cruise control main switch is turned OFF.	control module and the cruise control combination switch • A wire shorted to ground between the gauge control module and the cruise control combination switch
Set switch signal	Set/decel switch pressed and released	CRUISE CONTROL SET SW should indicate ON when the set/decel switch is pressed and OFF when the set/decel switch is released.	• Faulty cruise control combination switch • An open in the wire between the gauge control module and the cruise control combination switch • A wire shorted to ground between the gauge control module and the cruise control combination switch
Resume switch signal	Resume/accel switch pressed and released	CRUISE CONTROL RESUME SW should indicate ON when the resume/accel switch is pressed and OFF when the resume/accel switch is released.	• Faulty cruise control combination switch • An open in the wire between the gauge control module and the cruise control combination switch • A wire shorted to ground between the gauge control module and the cruise control combination switch
Cancel switch signal	Cancel switch pressed and released	CRUISE CONTROL CANCEL SW should indicate ON when the cancel switch is pressed and OFF when the cancel switch is released.	Faulty cruise control combination switch
Cruise control indicator signal	Start the engine, turn the cruise control main switch on, and drive the vehicle above 25 mph (40 km/h). Set and cancel the cruise control.	CRUISE INDICATOR should indicate ON when the cruise control is set and OFF when the cruise control is canceled.	Faulty gauge control module

CRUISE CONTROL COMBINATION SWITCH TEST/REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) in the SRS before doing repairs or service.

1. Remove the driver's airbag (see **DRIVER'S AIRBAG REPLACEMENT**).
2. Remove the steering wheel (see **STEERING WHEEL REMOVAL**).
3. Remove the six screws, then remove the cruise control combination switch.

Fig. 3: Identifying Cruise Control Combination Switch Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity between the terminals in each switch position according to **Fig. 4**.
 - If there is continuity, and it matches the table, but-switch failure occurred on the cruise control input test, check and repair the wire harness on the switch circuit.
 - If there is no continuity in one or both positions, replace the switch.

Terminal	3	4	5	6	7
Position					
Cruise control main switch (ON)				○—○	
Cruise control main switch (OFF)					
Set/decel (PRESSED)	○—○				
Resume/accel (PRESSED)	○—○		○		
Cancel (PRESSED)	○—○	○			

Fig. 4: Checking For Continuity Between Terminals In Each Switch Position

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check for continuity between the terminals in according to **Fig. 5**.
- If there is continuity, and it matches the table, check and repair the wire harness on the switch circuit.
 - If there is no continuity in one or more positions, replace the switch.

Fig. 5: Checking For Continuity Between Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENGINE COMPRESSION INSPECTION

NOTE: After the inspection, you must reset the powertrain control module (PCM). Otherwise, the PCM will continue to stop the fuel injectors from functioning.

1. Warm up the engine to normal operating temperature (cooling fan comes on).
2. Turn the ignition switch OFF.
3. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 **GENERAL TROUBLESHOOTING INFORMATION**).

4. Turn the ignition switch ON (II).
5. Make sure the HDS communicates with the vehicle and the PCM. If it doesn't communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
6. Select PGM-FI, INSPECTION, then ALL INJECTORS OFF function on the HDS.
7. Turn the ignition switch OFF.
8. Remove the six ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
9. Remove the six spark plugs.
10. Attach the compression gauge to a spark plug hole.

Fig. 5: Identifying Compression Gauge To Spark Plug Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Open the throttle fully, crank the engine with the starter motor and measure the compression.

Compression Pressure: Above 930 kPa (9.5 kgf/cm² , 135 psi)

12. Measure the compression on the remaining cylinders.

Maximum Variation: Within 200 kPa (2.0 kgf/cm² , 28 psi)

13. If the compression is not within specifications, check the following items, then remeasure the compression.
 - Damaged or worn valves and seats
 - Damaged cylinder head gasket
 - Damaged or worn piston rings
 - Damaged or worn piston and cylinder bore
14. Select PCM reset (see **PCM RESET**) to cancel the ALL INJECTORS OFF function on the HDS.

VTEC ROCKER ARM TEST

Special Tools Required

- VTEC air adapter 07VAJ-P8A010A
- VTEC air stopper 070AJ-0030100
- Air pressure regulator 07AAJ-PNAA101

1. Start the engine and let it run for 5 minutes, then turn the ignition switch OFF.
2. Remove the intake manifold (see **REMOVAL**).
3. Remove the cylinder head covers (see **CYLINDER HEAD COVER REMOVAL**).
4. Set the No. 1 piston at top dead center (TDC) (see step 3 on).
5. Push on the intake mid rocker arm (A) for the No. 1 cylinder. The mid rocker arm should move independently of the primary rocker arm (B) and secondary rocker arm (C).
 - If the mid rocker arm moves freely, go to step 6.
 - If the intake mid rocker arm does not move, remove the mid, primary, and secondary intake rocker arms as an assembly, then check that the rocker arm pistons in the mid and primary rocker arms move smoothly. If any rocker arm needs replacing, replace the mid, primary, and secondary rocker arms as an assembly, and retest.

Fig. 6: Identifying Intake Mid Rocker Arm

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Repeat step 5 on the remaining intake mid rocker arms with each piston at TDC. When all the mid rocker arms pass the test, go to step 7.
7. Check that the air pressure on the shop air compressor gauge indicates over 690 kPa (7.0 kgf/cm² , 100 psi).
8. Inspect the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
9. Remove the No. 1 and No. 6 intake rocker shaft mounting bolts, then install the VTEC air adapter and VTEC air stopper, and connect the air pressure regulator as shown.

FRONT:

Fig. 7: Identifying Air Pressure Regulator - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 8: Identifying Air Pressure Regulator - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Loosen the valve on the regulator, and apply the specified air pressure.

Specified Air Pressure: 440-540 kPa (4.5-5.5 kgf/cm² , 64-78 psi)

NOTE: If the rocker arm pistons do not move after applying air pressure; move the primary or secondary rocker arm up and down manually.

11. Make sure that the intake primary rocker arm (A) and intake secondary rocker arm (B) are mechanically connected by the piston and that the mid rocker arm (C) does not move when pushed manually. If any intake mid rocker arm moves independently of the primary and secondary rocker arms, replace the rocker arms as a set.

Fig. 9: Identifying Intake Primary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the air pressure regulator, VTEC air adapter, and VTEC air stopper.
13. Tighten the rocker shaft bolts to 24 N.m (2.4 kgf.m, 17 lbf.ft).
14. Install the cylinder head covers (see **CYLINDER HEAD COVER INSTALLATION**).
15. Install the intake manifold (see **INSTALLATION**).

VALVE CLEARANCE ADJUSTMENT

NOTE: **Adjust the valves only when the cylinder head temperature is less than 100°F (38°C).**

1. Remove the intake manifold (see **REMOVAL**).
2. Remove the cylinder head covers (see **CYLINDER HEAD COVER REMOVAL**).
3. Set the No. 1 piston at top dead center (TDC). Align the pointer (A) on the front upper cover with the No. 1 piston TDC mark (B) on the front camshaft pulley.

Fig. 10: Identifying Pointer On Front Upper Cover With No. 1 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Select the correct thickness feeler gauge for the valves you're going to check.

Valve Clearance

Intake: 0.20-0.24 mm (0.008-0.009 in.)

Exhaust: 0.28-0.32 mm (0.011-0.013 in.)

REAR:

Fig. 11: Identifying Intake And Exhaust Valves - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT:

Fig. 12: Identifying Intake And Exhaust Valves - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Insert the feeler gauge (A) between the adjusting screw and the end of the valve stem on No. 1 cylinder and slide it back and forth; you should feel a slight amount of drag.

Fig. 13: Inserting Feeler Gauge Between Adjusting Screw And End Of Valve Stem
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If you feel too much or too little drag, loosen the locknut (A), and turn the adjusting screw (B) until the drag on the feeler gauge is correct.

Fig. 14: Identifying Locknut And Adjusting Screw With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tighten the locknut and recheck the clearance. Repeat the adjustment, if necessary.
8. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 4 piston TDC mark (B) on the front camshaft pulley.

Fig. 15: Aligning Front Upper Cover Pointer With No. 4 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check and, if necessary, adjust the valve clearance on No. 4 cylinder.
10. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 2 piston TDC mark (B) on the front camshaft pulley.

Fig. 16: Aligning Front Upper Cover Pointer With No. 2 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check and, if necessary, adjust the valve clearance on No. 2 cylinder.
12. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 5 piston TDC mark (B) on the front camshaft pulley.

Fig. 17: Aligning Front Upper Cover Pointer With No. 5 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check and, if necessary, adjust the valve clearance on No. 5 cylinder.
14. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 3 piston TDC mark (B) on the front camshaft pulley.

Fig. 18: Aligning Front Upper Cover Pointer With No. 3 Piston TDC Mark
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Check and, if necessary, adjust the valve clearance on No. 3 cylinder.
16. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 6 piston TDC mark (B) on the front camshaft pulley.

Fig. 19: Aligning Front Upper Cover Pointer With No. 6 Piston TDC Mark
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Check and, if necessary, adjust the valve clearance on No. 6 cylinder.
18. Install the cylinder head covers (see **CYLINDER HEAD COVER INSTALLATION**).
19. Install the intake manifold (see **INSTALLATION**).

CRANKSHAFT PULLEY REMOVAL AND INSTALLATION

Special Tools Required

- Holder handle 07JAB-001020B:
- Holder attachment, 50 mm, offset 07MAB-PY3010A

- Socket, 19 mm 07JAA-001020A, or a commercially available 19 mm socket

REMOVAL

1. Remove the right front wheel.
2. Remove the splash shield.

Fig. 20: Identifying Splash Shield Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the drive belt (see **DRIVE BELT INSPECTION**).
4. Hold the pulley with the holder handle (A) and holder attachment (B).

Fig. 21: Identifying Holder Handle And Holder Attachment

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the bolt with a heavy duty 19 mm socket (C) and breaker bar, then remove the crankshaft pulley.

INSTALLATION

1. Remove any oil and clean the pulleys (A), crankshaft (B), bolt (C), and washer (D). Lubricate with new engine oil as shown.

Fig. 22: Identifying Engine Oil Application Area
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the crankshaft pulley, and tighten the bolt. Do not use an impact wrench.
 1. Hold the pulley with the holder handle (A) and holder attachment (B). Torque the bolt to 64 N.m (6.5 kgf.m, 47 lbf.ft) with a torque wrench and heavy duty 19 mm socket (C).
 2. Mark the bolt head (D) and crankshaft pulley (E) as shown, then tighten the bolt an additional 60° (The mark on the bolt head lines up with the mark on the crankshaft pulley).

Fig. 23: Identifying Holder Handle And Holder Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the drive belt (see **DRIVE BELT REPLACEMENT**).
4. Install the splash shield.
5. Install the right front wheel.

TIMING BELT INSPECTION

1. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
2. Remove the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
3. Remove the front upper cover.

Fig. 24: Identifying Front Upper Cover With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the timing belt for cracks and oil or coolant contamination. Replace the belt if it is cracked, or is contaminated with oil or coolant. Wipe off any oil or solvent that gets on the belt.

Fig. 25: Identifying Timing Belt For Cracks And Oil Or Coolant Contamination
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TIMING BELT REMOVAL

1. Turn the crankshaft so its white mark (A) lines up with the pointer (B).

Fig. 26: Aligning Crankshaft With Pointer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check that the No. 1 piston top dead center (TDC) mark (A) on the front camshaft pulley and the pointer (B) on the front upper cover are aligned.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark.

Fig. 27: Aligning Front Upper Cover With No. 1 Piston Top Dead Center (TDC)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Raise the vehicle on the lift, then remove the right front wheel.
4. Remove the splash shield.

Fig. 28: Identifying Splash Shield Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Lower the vehicle on the lift.
6. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
7. Remove the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
8. For ease of removing the side engine mount, support the engine with a jack and wood block under the oil pan.
9. Remove the ground cable (A), then remove the upper half of the side engine mount bracket (B).

Fig. 29: Identifying Ground Cable And Upper Half Of Side Engine Mount Bracket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the front upper cover (A) and rear upper cover (B).

Fig. 30: Identifying Front Upper Cover And Rear Upper Cover Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the crankshaft pulley (see CRANKSHAFT PULLEY REMOVAL AND INSTALLATION).
12. Remove the lower cover.

Fig. 31: Identifying Lower Cover Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove one of the battery clamp bolts from the battery tray, and grind the end of it as shown.

Fig. 32: Identifying Battery Clamp Bolts Threads
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Thread in the battery clamp bolt as shown to hold the timing belt adjuster in its current position. Tighten it by hand; do not use a wrench.

Fig. 33: Identifying Battery Clamp Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the timing belt guide plate (A).

Fig. 34: Identifying Timing Belt Guide Plate

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the lower half of the side engine mount bracket.

Fig. 35: Identifying Side Engine Mount Bracket Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the idler pulley bolt (A) and idler pulley (B), then remove the timing belt. Discard the idler pulley bolt.

Fig. 36: Identifying Idler Pulley Bolt And Idler Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TIMING BELT INSTALLATION

NOTE: The following is the installation procedure for a used timing belt. If you are installing a new belt, refer to the **TIMING BELT REPLACEMENT** .

1. Clean the timing belt pulleys, timing belt guide plate, and the upper and lower covers.
2. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of

the timing belt drive pulley with the pointer (B) on the oil pump.

Fig. 37: Aligning TDC Mark With Oil Pump Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT:

Fig. 38: Identifying TDC Marks On Camshaft Pulleys With Pointers - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 39: Identifying TDC Marks On Camshaft Pulleys With Pointers - Rear
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosely install the idler pulley with a new idler pulley bolt so the pulley can move but does not come off.
5. If the auto-tensioner has extended and the timing belt cannot be installed, do the timing belt replacement procedure (see **TIMING BELT REPLACEMENT**).
6. Install the timing belt in a counterclockwise sequence starting with the drive pulley. Take care not to damage the timing belt when installing it.

- 1 Drive pulley (A)
- 2 Idler pulley (B)
- 3 Front camshaft pulley (C)
- 4 Water pump pulley (D)
- 5 Rear camshaft pulley (E)
- 6 Adjusting pulley (F)

Fig. 40: Installing Timing Belt Counterclockwise Sequence
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tighten the idler pulley bolt.

Fig. 41: Identifying Idler Pulley Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the battery clamp bolt from the back cover.

Fig. 42: Identifying Battery Clamp Bolt From Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the lower half of the side engine mount bracket.

Fig. 43: Identifying Side Engine Mount Bracket Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the timing belt guide plate as shown.

Fig. 44: Identifying Timing Belt Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the lower cover.

Fig. 45: Identifying Lower Cover Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the front upper cover (A) and rear upper cover (B).

Fig. 46: Identifying Front Upper Cover And Rear Upper Cover Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the crankshaft pulley (see **INSTALLATION**).
14. Rotate the crankshaft pulley about six turns clockwise so the timing belt positions itself on the pulleys.
15. Turn the crankshaft pulley so the white mark (A) lines up with the pointer (B).

Fig. 47: Aligning Crankshaft Pulley White Mark With Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check the camshaft pulley marks.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark.

- If the camshaft pulley marks are at TDC, go to step 17.
- If the camshaft pulley marks are not at TDC, remove the timing belt and repeat steps 2 through 16.

FRONT:

Fig. 48: Identifying Camshaft Pulley Marks - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 49: Identifying Camshaft Pulley Marks - Rear
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Install the upper half of the side engine mount bracket, and tighten the new mounting bolts (A), then tighten the mass damper mounting bolt (B).

Fig. 50: Identifying Side Engine Mount Bracket Mounting Bolts With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the ground cable (C).
19. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
20. Install the drive belt (see **DRIVE BELT REPLACEMENT**).
21. Install the splash shield.

Fig. 51: Identifying Splash Shield Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the right front wheel.
23. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

TIMING BELT REPLACEMENT

NOTE: The following procedure is for the installation of a new timing belt. If you are installing a used belt, refer to the **TIMING BELT INSTALLATION** procedure .

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Clean the timing belt pulleys, timing belt guide plate, and the upper and lower covers.
3. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of the timing belt drive pulley with the pointer (B) on the oil pump.

Fig. 52: Aligning TDC Mark With Pointer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT:

Fig. 53: Identifying TDC Marks On Camshaft Pulleys With Pointers - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 54: Identifying TDC Marks On Camshaft Pulleys With Pointers - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the battery clamp bolt from the back cover.
6. Remove the auto-tensioner.

Fig. 55: Identifying Auto-Tensioner

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Align the holes on the rod and housing of the auto-tensioner.

Fig. 56: Identifying Holes On Rod And Housing Of Auto-Tensioner

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Use a hydraulic press to slowly compress the auto-tensioner. Insert a 2.0 mm (0.08 in.) pin through the housing and the rod.

NOTE: The compression pressure should not exceed 9,800 N (1,000 kgf, 2,200 lbf).

9. Install the auto-tensioner.

NOTE: Make sure the pin stays in place.

Fig. 57: Identifying Auto-Tensioner With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Thread in the battery clamp bolts as shown to hold the timing belt adjuster. Tighten it by hand; do not use a wrench.

Fig. 58: Identifying Battery Clamp Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Loosely install the idler pulley with a new idler pulley bolt so the pulley can move but does not come off.
12. Install the timing belt in a counterclockwise sequence starting with the drive pulley.

- 1 Drive pulley (A)
- 2 Idler pulley (B)
- 3 Front camshaft pulley (C)
- 4 Water pump pulley (D)
- 5 Rear camshaft pulley (E)
- 6. Adjusting pulley (F)

Fig. 59: Installing Timing Belt Counterclockwise Sequence
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Tighten the idler pulley bolt.

Fig. 60: Identifying Idler Pulley Bolt With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the pin from the auto-tensioner.

Fig. 61: Identifying Pin From Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the battery clamp bolt from the back cover.
16. Install the lower half of the side engine mount bracket.

Fig. 62: Identifying Lower Half Of Side Engine Mount Bracket Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Install the timing belt guide plate as shown.

Fig. 63: Identifying Timing Belt Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the lower cover.

Fig. 64: Identifying Lower Cover With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the front upper cover (A) and rear upper cover (B).

Fig. 65: Identifying Front Upper Cover And Rear Upper Cover Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the crankshaft pulley (see **INSTALLATION**).
21. Rotate the crankshaft pulley about six turns clockwise so the timing belt positions itself on the pulleys.
22. Turn the crankshaft pulley so the white mark (A) lines up with the pointer (B).

Fig. 66: Aligning Crankshaft Pulley White Mark With Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Check the camshaft pulley marks.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark.

- If the camshaft pulley marks are at TDC, go to step 24.
- If the camshaft pulley marks are not at TDC, remove the timing belt and repeat steps 3 through 22.

FRONT:

Fig. 67: Identifying Camshaft Pulley Marks - Front
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 68: Identifying Camshaft Pulley Marks - Rear
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Install the upper half of the side engine mount bracket, and tighten the new mounting bolts (A), then tighten the mass damper mounting bolt (B).

Fig. 69: Identifying Mass Damper Mounting Bolt With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Install the ground cable (C).
26. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
27. Install the drive belt (see **DRIVE BELT REPLACEMENT**).
28. Install the splash shield.

Fig. 70: Identifying Splash Shield Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Install the right front wheel.
30. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

TIMING BELT ADJUSTER REPLACEMENT

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Remove the battery clamp bolt from the back cover.
3. Remove the auto-tensioner.
4. Remove the bolt (A), then remove the timing belt adjuster (B) and collar (C).

Fig. 71: Identifying Timing Belt Adjuster And Collar With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Replace the timing belt auto-tensioner and timing belt (see **TIMING BELT REPLACEMENT**).

TIMING BELT DRIVE PULLEY REPLACEMENT

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Remove the crankshaft position (CKP) sensor (see **CKP SENSOR REPLACEMENT**).
3. Remove the timing belt drive pulley (A) and key (B).

Fig. 72: Identifying Timing Belt Drive Pulley And Key
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the timing belt drive pulley and key for damage. If it is cracked or damaged, replace the timing belt drive pulley.
5. Install the new timing belt drive pulley.
6. Install the CKP sensor (see **CKP SENSOR REPLACEMENT**).

7. Install the timing belt (see **TIMING BELT INSTALLATION**).
8. Do the CKP pattern clear/CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

CYLINDER HEAD COVER REMOVAL

1. Remove the intake manifold (see **REMOVAL**).
2. Remove the six ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
3. Remove the dipstick.
4. Remove the two bolts (A) securing the harness holder, and disconnect the front air fuel ratio (A/F) sensor connector (B), front secondary heated oxygen sensor (secondary HO2S) connector (C), exhaust gas recirculation (EGR) valve connector (D) and engine coolant temperature (ECT) sensor 1 connector (E).

Fig. 73: Identifying Front Air Fuel Ratio (A/F) Sensor Connector And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the three injector connectors from the injectors on the rear side cylinder head.
6. Remove the power steering hose bracket mounting bolt (A), the harness holder mounting bolts (B), and the engine ground cable bolt (C).

Fig. 74: Identifying Power Steering Hose Bracket Mounting Bolt And Engine Ground Cable Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the engine ground cable (D) and disconnect the breather hose (E).
8. Remove the cylinder head covers.

FRONT:

Fig. 75: Identifying Cylinder Head Covers Bolts - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 76: Identifying Cylinder Head Covers Bolts - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD COVER INSTALLATION

1. Check the spark plug seals and head cover gasket for damage and deterioration. If any seal or gasket is damaged, replace it.
2. Thoroughly clean the head cover gasket and the groove of the cylinder cover.
3. Install the head cover gasket (A) in the groove of the cylinder head cover (B). Make sure the head cover gasket is seated securely.

Fig. 77: Identifying Head Cover Gasket And Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Clean the head cover contacting surfaces with a shop towel.
5. Set the spark plug seals (A) on the spark plug tubes, and install the cylinder head covers (B).

FRONT:

Fig. 78: Identifying Spark Plug Seals And Cylinder Head Covers Bolts - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 79: Identifying Spark Plug Seals And Cylinder Head Covers Bolts - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.
7. Tighten the bolts in three steps. In the final step tighten all bolts, in sequence, 12 N.m (1.2 kgf.m, 8.8 lbf.ft).

Fig. 80: Identifying Cylinder Head Cover Bolts Tightening Sequence
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Tighten the harness holder mounting bolts (A) and the power steering hose bracket mounting bolt (B).

Fig. 81: Identifying Harness Holder Mounting Bolts And Power Steering Hose Bracket Mounting Bolt With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the engine ground cable (C) and breather hose (D).
10. Connect the three injector connectors.
11. Tighten the two bolts (A) securing the harness holder, and connect the engine coolant temperature (ECT) sensor 1 connector (B), exhaust gas recirculation (EGR) valve connector (C), front secondary heated oxygen sensor (secondary HO2S) connector (D) and front air fuel ratio (A/F) sensor connector (E).

Fig. 82: Identifying Harness Holder, Bolts And Engine Coolant Temperature (ECT) Sensor With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the dipstick.
13. Install the six ignition coils (see **IGNITION COIL REMOVAL/INSTALLATION**).
14. Install the intake manifold (see **INSTALLATION**).

CYLINDER HEAD REMOVAL

NOTE:

- Use fender covers to avoid damaging painted surfaces.
- To avoid damage, unplug the wiring connectors carefully while holding the connector portion.
- To avoid damaging the cylinder head, wait until the engine coolant temperature drops below 100°F (38°C) before loosening the cylinder head bolts.
- Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring or hoses, or interfere with other parts.

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Do the battery terminal disconnection procedure(See **DISCONNECTION**).
3. Drain the engine coolant (see **COOLANT REPLACEMENT**).
4. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
5. Remove the power steering (P/S) pump (A), and P/S hose clamp (B).

Fig. 83: Identifying Power Steering (P/S) Pump, And P/S Hose Clamp
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the alternator (see ALTERNATOR REMOVAL AND INSTALLATION).
7. Remove the timing belt (see TIMING BELT REMOVAL).
8. Remove the intake manifold (see REMOVAL).
9. Remove the six ignition coils (see IGNITION COIL REMOVAL/INSTALLATION).
10. Disconnect the upper radiator hose (A) and lower radiator hose (B).

Fig. 84: Identifying Upper Radiator Hose And Lower Radiator Hose
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (B) (see FUEL LINE/QUICK-CONNECT FITTING REMOVAL).

Fig. 85: Identifying Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the purge joint.

Fig. 86: Identifying Purge Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the engine wire harness connectors and wire harness clamps from the cylinder head.
 - Six injector connectors
 - Engine coolant temperature (ECT) sensor 1 connector
 - Crankshaft position (CKP) sensor connector
 - Exhaust gas recirculation (EGR) valve connector
 - Rocker arm oil control solenoid connector
 - Rocker arm oil pressure switch connector
 - Oil pressure switch connector
 - Two air fuel ratio (A/F) sensor connectors
 - Two secondary heated oxygen sensor (secondary HO2S) connectors
14. Remove the front warm up three way catalytic converter (front WU-TWC) (see **FRONT**) and rear warm

up three way catalytic converter (rear WU-TWC) (see **REAR**).

15. Remove the connector bracket from the front cylinder head.

Fig. 87: Identifying Front Cylinder Head Bracket Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the bracket (A) from the rear cylinder head.

Fig. 88: Identifying Rear Cylinder Head Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the fuel rails (see **INJECTOR REPLACEMENT**).
18. Remove the water passage (see **WATER PASSAGE REPLACEMENT**).
19. Remove the front and rear camshaft pulleys (A) and back covers (B).

Fig. 89: Identifying Front And Rear Camshaft Pulleys And Back Covers
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
21. Remove the cylinder head bolts. To prevent warpage, loosen the bolts in sequence 1/3 turn at a time; repeat the sequence until all the bolts are loosened.

Fig. 90: Identifying Cylinder Head Bolts In Sequence
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Remove the cylinder head.

CAMSHAFT REPLACEMENT

FRONT

1. Do the battery terminal disconnection procedure(See **DISCONNECTION**).
2. Remove the battery and battery box.
3. Drain the engine coolant (see **COOLANT REPLACEMENT**).
4. Disconnect the upper radiator hose.

Fig. 91: Identifying Upper Radiator Hose

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the exhaust gas recirculation (EGR) valve (see **EGR VALVE REPLACEMENT**).

Fig. 92: Identifying Exhaust Gas Recirculation Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the timing belt (see **TIMING BELT REMOVAL**).
7. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
8. Remove the front camshaft pulley.
9. Remove the thrust cover (A), then remove the camshaft (B).

Fig. 93: Identifying Thrust Cover, Camshaft And Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the camshaft in the reverse order of removal. Always use a new O-ring (C). Apply new engine oil to the journals and cam lobes.
11. Apply new engine oil to the threads of the camshaft pulley mounting bolt, then install the front camshaft pulley (see step 11 on **Camshaft, Rocker Arm Assembly, Camshaft Seal, and Pulley Installation**).
12. Install the rocker arm assembly, then tighten the mounting bolts (see step 9 on **Camshaft, Rocker Arm Assembly, Camshaft Seal, and Pulley Installation**).
13. Install the timing belt (see **TIMING BELT INSTALLATION**).
14. Adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
15. Install the upper radiator hose.
16. Install the battery and battery box. Do the battery terminal reconnection procedure(See **RECONNECTION**).
17. Fill the radiator with engine coolant and bleed the air out from the system (see step 10 **COOLANT REPLACEMENT**).
18. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

REAR

1. Remove the intake manifold (see **REMOVAL**).
2. Remove the purge joint.

Fig. 94: Identifying Purge Joint

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the brake lines from the master cylinder (see **MASTER CYLINDER REPLACEMENT**).
4. Remove the timing belt (see **TIMING BELT REMOVAL**).
5. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
6. Remove the rear camshaft pulley.
7. Remove the thrust cover (A), then remove the camshaft (B).

Fig. 95: Identifying Thrust Cover And Camshaft Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the camshaft in the reverse order of removal. Always use a new O-ring (C). Apply new engine oil to the journals and cam lobes.
9. Apply new engine oil to the threads of the camshaft pulley mounting bolt, then install the rear camshaft pulley (see step 11 on **Camshaft, Rocker Arm Assembly, Camshaft Seal, and Pulley Installation**).
10. Install the rocker arm assembly, then tighten the mounting bolts (see step 9 on **Camshaft, Rocker Arm Assembly, Camshaft Seal, and Pulley Installation**).
11. Install the timing belt (see **TIMING BELT INSTALLATION**).

12. Adjust the valve clearance (see VALVE CLEARANCE ADJUSTMENT).
13. Install the brake lines (see MASTER CYLINDER REPLACEMENT) and do the brake system bleeding procedure (see BRAKE SYSTEM BLEEDING).
14. Do the CKP pattern clear/CKP pattern learn procedure (see CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN).

CYLINDER HEAD INSPECTION FOR WARPAGE

1. Remove the cylinder head (see CYLINDER HEAD REMOVAL).
2. Inspect the camshaft (see CAMSHAFT INSPECTION).
3. Check the cylinder head for warpage. Measure along the edges, and three ways across the center.
 - If warpage is less than 0.05 mm (0.002 in.), cylinder head resurfacing is not required.
 - If warpage is between 0.05 mm (0.002 in.) and 0.2 mm (0.008 in.), resurface the cylinder head.
 - Maximum resurface limit is 0.2 mm (0.008 in.) based on a height of 121 mm (4.76 in.).

Cylinder Head Height Standard (New): 120.95-121.05 mm

(4.7618-4.7657 in.)

Fig. 96: Identifying Cylinder Head Warpage

Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM ASSEMBLY REMOVAL

1. Remove the intake manifold (see **REMOVAL**).
2. Remove the cylinder head cover (see **CYLINDER HEAD COVER REMOVAL**).
3. Loosen the locknuts and adjusting screws (A).

Fig. 97: Identifying Locknuts And Adjusting Screws
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolts and the rocker arm assembly.
 1. Loosen the rocker shaft mounting bolts two turns at a time, to prevent damaging the valves or rocker arm assembly.
 2. When removing the rocker arm assembly, do not remove the rocker shaft mounting bolts. The bolts will keep the springs and the rocker arms on the shafts.

Fig. 98: Identifying Rocker Shaft Mounting Bolts In Sequence
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY

NOTE:

- Identify parts as they are removed so they can be reinstalled in their original locations.
- Inspect the rocker shafts and rocker arms (see ROCKER ARM AND SHAFT INSPECTION).
- If reused, the rocker arms, must be installed in their original locations.
- When removing or installing the rocker arm assembly, do not remove the rocker shaft mounting bolts. The bolts will keep the springs and rocker arms on the shaft.
- Bundle the intake rocker arms with rubber bands to keep them together as a set.
- Prior to reassembling, clean all the parts in solvent, dry them and apply new engine oil to any contact points.
- When replacing the intake rocker arm assembly, remove the fastening hardware from the new intake rocker arm assembly.

Fig. 99: Identifying View Of Rocker Arm And Shaft
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT INSPECTION

1. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
2. Disassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
3. Measure the diameter of the shaft at the first rocker location.

Fig. 100: Measuring Diameter Of Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Zero the gauge (A) to the shaft diameter.

Fig. 101: Identifying Setting Dial Gauge To Zero
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the inside diameter of the rocker arm, and check it for an out-of-round condition.

Intake Rocker Arm-to-Shaft Clearance

Standard (New): 0.026-0.067 mm (0.0010-0.0026 in.)

Service Limit: 0.067 mm (0.0026 in.)

Exhaust Rocker Arm-to-Shaft Clearance

Standard (New): 0.026-0.077 mm (0.0010-0.0030 in.)

Service Limit: 0.077 mm (0.0030 in.)

Fig. 102: Identifying Inside Diameter Of Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Repeat for all rockers and both shafts. If the clearance is beyond the service limit, replace the rocker shaft and all rocker arms that are beyond the service limit. If any intake rocker arm needs replacement, replace all three rocker arms in that set (primary, mid, and secondary).
7. Inspect the rocker arm synchronizing pistons (A). Push them manually. If they do not move smoothly, replace the rocker arm set.

NOTE:

- Apply new engine oil to the pistons when reassembling.
- When reassembling the primary rocker arm (B), carefully apply air pressure to the oil passage of the rocker arm.

Fig. 103: Identifying Rocker Arm Synchronizing Pistons
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Reassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
9. Install the rocker arm assembly (see **CAMSHAFT, ROCKER ARM ASSEMBLY, CAMSHAFT**

SEAL, AND PULLEY INSTALLATION).**CAMSHAFT INSPECTION**

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Remove the rocker arms (see **ROCKER ARM ASSEMBLY REMOVAL**).
3. Put the rocker shafts on the cylinder head, then tighten the bolts to the specified torque.

NOTE: Apply new engine oil to the threads and flange of the exhaust rocker shaft mounting bolts.

Specified Torque

8 x 1.25 mm: 24 N.m (2.4 kgf.m, 17 lbf.ft)

Fig. 104: Tightening Exhaust Rocker Shaft Mounting Bolts In Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Seat the camshaft by pushing it toward the rear of the cylinder head.
5. Zero the dial indicator against the end of the camshaft. Push the camshaft back and forth and read the end play. If the end play is beyond the service limit, replace the thrust cover and recheck. If it is still beyond the service limit, replace the camshaft.

Camshaft End Play

Standard (New): 0.05-0.20 mm

(0.002-0.008 in.)

Service Limit: 0.20 mm (0.008 in.)

Fig. 105: Identifying Camshaft End Play

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the camshaft thrust cover (A), then pull out the camshaft (B).

Fig. 106: Identifying Camshaft Thrust Cover And Camshaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Wipe the camshaft clean, then inspect the lift ramps. Replace the camshaft if any lobes are pitted, scored, or excessively worn.
8. Measure the diameter of each camshaft journal.

Fig. 107: Identifying Diameter Of Camshaft Journal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Zero the gauge to the journal diameter.

Fig. 108: Identifying Setting Dial Gauge To Zero
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Clean the camshaft bearing surfaces in the cylinder head. Measure the inside diameter of each camshaft bearing surface, and check for an out-of-round condition.
- If the camshaft-to-holder clearance is within the service limit, go to step 12.
 - If the camshaft-to-holder clearance is beyond the service limit and the camshaft has been replaced, replace the cylinder head.
 - If the camshaft-to-holder clearance is beyond the service limit and the camshaft has not been

replaced, go to step 11.

Camshaft-to-Holder Oil Clearance

Standard (New): 0.050-0.089 mm (0.0020-0.0035 in.)

Service Limit: 0.15 mm (0.006 in.)

Fig. 109: Identifying Camshaft-To-Holder Oil Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check the total runout with the camshaft supported on V-blocks.
 - If the total runout of the camshaft is within the service limit, replace the cylinder head.
 - If the total runout is beyond the service limit, replace the camshaft and recheck the oil clearance. If the oil clearance is still out of tolerance, replace the cylinder head.

Camshaft Total Runout

Standard (New): 0.03 mm (0.001 in.) max.

Service Limit: 0.04 mm (0.002 in.)

Fig. 110: Identifying Camshaft Runout

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Measure the cam lobe height.

Cam Lobe Height Standard (New):

CAM LOBE HEIGHT SPECIFICATION

	INTAKE	EXHAUST
PRI	35.112 mm (1.3824 in.)	
MID	36.394 mm (1.4328 in.)	36.389 mm (1.4326 in.)
SEC	35.112 mm (1.3824 in.)	
PRI: Primary IN: Intake	MID: Mid EX: Exhaust	SEC: Secondary T/B: Timing Belt

Fig. 111: Identifying Cam Lobe Height

Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE, SPRING, AND VALVE SEAL REMOVAL

Special Tools Required

Valve spring compressor attachment 07757-PJ1010A

Identify the valves and valve springs as they are removed so that each item can be reinstalled in its original position.

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Using an appropriate-sized socket (A) and plastic mallet (B), lightly tap the valve retainer to loosen the valve cotters.

Fig. 112: Tapping Valve Retainer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the valve spring compressor attachment and valve spring compressor. Compress the spring and remove the valve cotters.

Fig. 113: Identifying Spring And Valve Cotters

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the valve spring compressor, valve spring compressor attachment, spring retainer, and spring.
5. Install the valve guide seal remover (A).

Fig. 114: Identifying Valve Guide Seal Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the valve seal.

Fig. 115: Identifying Valve Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve spring seat and valve.

VALVE INSPECTION

1. Remove the valves (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**).
2. Measure the valve in these areas.

Intake Valve Dimensions

A Standard (New): 35.90-36.10 mm (1.413-1.421 in.)

B Standard (New): 116.55-117.15 mm (4.589-4.612 in.)

C Standard (New): 5.485-5.495 mm (0.2159-0.2163 in.)

C Service Limit: 5.455 mm (0.2148 in.)

Exhaust Valve Dimensions

A Standard (New): 29.90-30.10 mm (1.177-1.185 in.)

B Standard (New): 113.90-114.50 mm (4.484-4.508 in.)

C Standard (New): 5.450-5.460 mm (0.2146-0.2150 in.)

C Service Limit: 5.420 mm (0.2134 in.)

Fig. 116: Identifying Valve Length Dimension

Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE STEM-TO-GUIDE CLEARANCE INSPECTION

1. Remove the valves (see VALVE, SPRING, AND VALVE SEAL REMOVAL).
2. Slide the valve out of its guide about 10 mm (0.39 in.), then measure the guide-to-stem clearance with a dial indicator while rocking the stem in the direction of normal thrust (wobble method).
 - If the measurement exceeds the service limit, recheck it using a new valve.
 - If the measurement is now within the service limit, reassemble using a new valve.
 - If the measurement with a new valve still exceeds the service limit, go to step 3.

Intake Valve Stem-to-Guide Clearance

Standard (New): 0.04-0.09 mm (0.002-0.004 in.)

Service Limit: 0.16 mm (0.006 in.)

Exhaust Valve Stem-to-Guide Clearance

Standard (New): 0.11-0.16 mm (0.004-0.006 in.)

Service Limit: 0.22 mm (0.009 in.)

Fig. 117: Identifying Valve Stem-To-Guide Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Subtract the valve stem O.D. (measured with a micrometer) from the valve guide I.D. (measured with an inside micrometer or ball gauge). Take the measurements in three places along the valve stem and three places inside the valve guide. The difference between the largest guide measurement and the smallest stem measurement should not exceed the service limit.

Intake Valve Stem-to-Guide Clearance

Standard (New): 0.020-0.045 mm (0.0008-0.0018 in.)

Service Limit: 0.08 mm (0.003 in.)

Exhaust Valve Stem-to-Guide Clearance

Standard (New): 0.055-0.080 mm (0.0022-0.0031 in.)

Service Limit: 0.11 mm (0.004 in.)

VALVE GUIDE REPLACEMENT

Special Tools Required

- Valve guide driver, 5.5 mm 07742-0010100
 - Valve guide reamer, 5.5 mm 07HAH-PJ7A100
1. Inspect valve stem-to-guide clearance (see **VALVE STEM-TO-GUIDE CLEARANCE INSPECTION**).
 2. As illustrated, use a commercially available air-impact valve guide driver (A) modified to fit the diameter of the valve guides. In most cases, the same procedure can be done using the special tool and a conventional hammer.

**Fig. 118: Identifying Valve Guide Driver Dimension**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the proper replacement guides, and chill them in the freezer section of a refrigerator for about an hour.
4. Use a hot plate or oven to evenly heat the cylinder head to 300°F (150°C). Monitor the temperature with a cooking thermometer. Do not get the head hotter than 300°F (150°C); excessive heat may loosen the valve seats.

**Fig. 119: Identifying Cylinder Head**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Working from the camshaft side, use the driver and an air hammer to drive the guide about 2 mm (0.1 in.) towards the combustion chamber. This will knock off some of the carbon and make removal easier. Hold the air hammer directly in line with the valve guide to prevent damaging the driver. Wear safety goggles or a face shield.
6. Turn the head over, and drive the guide out toward the camshaft side of the head.

Fig. 120: Identifying Driving Guide Out Toward Camshaft Side Of Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If a valve guide still won't move, drill it out with a 8 mm (5/16 in.) bit, then try again.

NOTE: **Drill guides only in extreme cases; you could damage the cylinder head if the guide breaks.**

8. Take out the new guide(s) from the freezer, one at a time, as you need them.
9. Apply a thin coat of new engine oil to the outside of the new valve guide. Install the guide from the camshaft side of the head; use the valve guide driver to drive the guide to the specified installed height (A) of the guide (B). If you have all 12 guides to do, you may have to reheat the head.

Valve Guide Installed Height

Intake: 21.20-22.20 mm (0.835-0.874 in.)

Exhaust: 20.60-21.60 mm (0.811-0.850 in.)

Fig. 121: Identifying Valve Guide

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Coat both the reamer and the valve guide with cutting oil.
11. Rotate the reamer clockwise the full length of the valve guide bore.

Fig. 122: Rotating Reamer Clockwise

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Continue to rotate the reamer clockwise while drawing it from the bore.
13. Thoroughly wash the guide in detergent and water to remove any cutting residue.
14. Check the clearance with a valve (see **VALVE STEM-TO-GUIDE CLEARANCE INSPECTION**). Verify that a valve slides in the intake and exhaust valve guides without sticking.
15. Inspect the valve seat. If necessary renew the valve seat using a valve seat cutter (see **VALVE SEAT**

RECONDITIONING).**VALVE SEAT RECONDITIONING**

1. Inspect valve stem-to-guide clearance (see **VALVE STEM-TO-GUIDE CLEARANCE INSPECTION**). If the valve guides are worn, replace them (see **VALVE GUIDE REPLACEMENT**) before cutting the valve seats.
2. Renew the valve seats in the cylinder head using a valve seat cutter.

Fig. 123: Identifying Valve Seats In Cylinder Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully cut a 45° seat, removing only enough material to ensure a smooth and concentric seat.
4. Bevel the upper edge of the seat with the 30° cutter and the lower edge of the seat with the 67.5° cutter (intake seat) or the 60° cutter (exhaust seat). Check the width of the seat and adjust accordingly.

Fig. 124: Identifying Valve Seat Angle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Make one more very light pass with the 45° cutter to remove any possible burrs caused by the other cutters.

Valve Seat Width

Standard (New): 1.25-1.55 mm (0.049-0.061 in.)

Service Limit: 2.00 mm (0.079 in.)

6. After resurfacing the seat, inspect it for even valve seating. Apply Prussian Blue compound (A) to the valve face. Insert the valve in its original location in the head, then lift it and snap it closed against the seat several times.

Fig. 125: Applying Prussian Blue Compound To Valve Face
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. The actual valve seating surface (B), as shown by the blue compound, should be centered on the seat.
 - If it is too high (closer to the valve stem), you must make a second cut with the 67.5° cutter (intake seat) or the 60° cutter (exhaust seat) to move it down, then one more cut with the 45° cutter to restore seat width.
 - If it is too low (closer to the valve edge), you must make a second cut with the 30° cutter to move it up, then one more cut with the 45° cutter to restore seat width.

NOTE: The final cut should always be made with the 45° cutter.

8. Insert the intake and exhaust valves in the head, and measure the valve stem installed height (A).

Intake Valve Stem Installed Height

Standard (New): 46.75-47.55 mm (1.841-1.872 in.)

Service Limit: 47.80 mm (1.882 in.)

Exhaust Valve Stem Installed Height

Standard (New): 46.68-47.48 mm (1.838-1.869 in.)

Service Limit: 47.73 mm (1.879 in.)

Fig. 126: Identifying Valve Stem Height

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If the valve stem installed height is beyond the service limit, replace the valve and recheck. If it is still beyond the service limit, replace the cylinder head; the valve seat in the head is too deep.

VALVE, SPRING, AND VALVE SEAL INSTALLATION

Special Tools Required

- Stem seal driver 07PAD-0010000
 - Valve spring compressor attachment 07757-PJ1010A
1. Coat the valve stems with new engine oil. Install the valves in the valve guides.
 2. Check that the valves move up and down smoothly.
 3. Install the spring seats on the cylinder head.
 4. Install the new valve seals (A) using the stem seal driver (B).

NOTE: Exhaust valve seals (C) have a black spring (D) and intake valve seals (E) have a white spring (F); they are not interchangeable.

Fig. 127: Identifying Valve Seals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the valve spring and valve retainer. Place the end of the valve spring with closely wound coils toward the cylinder head.
6. Install the valve spring compressor attachment and valve spring compressor. Compress the spring and install the valve cotters.

Fig. 128: Identifying Valve Spring Compressor

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve spring compressor and valve spring compressor attachment.
8. Lightly tap the end of each valve stem two or three times with a plastic mallet (A) to ensure proper seating of the valve and valve cotters. Tap the valve stem only along its axis so you do not bend the stem.

Fig. 129: Tapping Valve Stem

Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAMSHAFT, ROCKER ARM ASSEMBLY, CAMSHAFT SEAL, AND PULLEY INSTALLATION

1. Apply a light coat of new engine oil around the camshaft oil seal.
2. Gently tap the new camshaft oil seal (A) into the cylinder head.
 1. Tap the camshaft oil seal in squarely.
 2. Install the oil seal about 0.5-1.5 mm (0.02-0.06 in.) below the surface of the cylinder head.

FRONT:

Fig. 130: Identifying Camshaft Oil Seal With Torque Specification - Front

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 131: Identifying Camshaft Oil Seal With Torque Specification - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the camshaft (B) into the cylinder head, then install the camshaft thrust cover (C). Always use a new O-ring (D).
4. Check that the oil seal lips are not distorted.
5. Install the solid dowel pins (E) and the hollow dowel pins (F).
6. Loosen the valve adjusting screws.
7. If the rocker arm assembly is disassembled, reassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
8. Set the rocker arm assembly in place, and loosely install the bolts. Make sure that the rocker arms are properly positioned on the valve stems.
9. Tighten each bolt two turns at a time in the sequence as shown to ensure that the rockers do not bind on the valves.

NOTE: Apply new engine oil to the threads and flange of the exhaust rocker shaft mounting bolts.

Specified Torque

8 x 1.25 mm: 24 N.m (2.4 kgf.m, 17 lbf.ft)

Fig. 132: Tightening Rocker Shaft Bolts In Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the front injector base and rear injector base. Always use a new gasket (see **INJECTOR BASE REMOVAL AND INSTALLATION**).
11. Apply new engine oil to the threads of the camshaft pulley mounting bolt (A). Install the back cover (B), then install the camshaft pulley (C).

Fig. 133: Identifying Camshaft Pulley Mounting Bolt And Back Cover With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD INSTALLATION

1. Clean the cylinder head and engine block surface.
2. Clean and install the oil control orifices (A) with new O-rings(B).

Fig. 134: Identifying Oil Control Orifices With O-Rings
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. install the dowel pins (C) and new cylinder head gaskets (D).
4. Clean the timing belt pulleys, timing belt guide plate, and the upper and lower covers.
5. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of the timing belt drive pulley with the pointer (B) on the oil pump.

Fig. 135: Identifying TDC Mark On Tooth Of Timing Belt Drive Pulley With Pointer
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT:

Fig. 136: Identifying TDC Marks On Camshaft Pulleys With Pointers - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 137: Identifying TDC Marks On Camshaft Pulleys With Pointers - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Put the cylinder head onto the engine block.
8. Measure the diameter of each cylinder head bolt at point A and point B.

Fig. 138: Identifying Diameter Of Cylinder Head Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If either diameter is less than 11.3 mm (0.44 in.), replace the cylinder head bolt.
10. Apply new engine oil to the threads and under the bolt heads of all cylinder head bolts.
11. Tighten the cylinder head bolts in sequence to 29 N.m (3.0 kgf.m, 22 lbf.ft). Use a beam-type torque wrench. When using a preset-type torque wrench, be sure to tighten slowly and do not overtighten. If a bolt makes any noise while you are torquing it, loosen the bolt and retighten it from the first step.

Fig. 139: Tightening Cylinder Head Bolts In Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. After torquing, tighten all cylinder head bolts in two steps (90° per step). If you are using a new cylinder head bolt, tighten the bolt an extra 90°.

NOTE: Remove the cylinder head bolt if you tightened it beyond the specified angle, and go back to step 8 of the procedure. Do not loosen it back to the specified angle.

Fig. 140: Identifying Cylinder Head Bolt Tightening Angle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the timing belt (see **TIMING BELT INSTALLATION**).
14. Adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
15. Install the cylinder head covers (see **CYLINDER HEAD COVER INSTALLATION**).
16. Install the water passage (see **WATER PASSAGE REPLACEMENT**).
17. Install the front warm up three way catalytic converter (front WU-TWC) (see **FRONT**) and rear warm up three way catalytic converter (rear WU-TWC) (see **REAR**).
18. Install the fuel rails (see step 8 **INJECTOR REPLACEMENT**).
19. Install the connector bracket to the front cylinder head.

Fig. 141: Identifying Front Cylinder Head Connector Bracket Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the bracket (A) to the rear cylinder head.

Fig. 142: Identifying Rear Cylinder Head Connector Bracket Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Install the purge joint.

Fig. 143: Identifying Purge Joint Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Connect the fuel feed hose (A) (see **FUEL LINE/QUICK-CONNECT FITTING INSTALLATION**), then install the quick-connect fitting cover (B).

Fig. 144: Identifying Fuel Feed Hose

Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Connect the engine wire harness connectors, and install the wire harness clamps to the cylinder head.
 - Six injector connectors
 - Engine coolant temperature (ECT) sensor 1 connector
 - Crankshaft position (CKP) sensor connector
 - Exhaust gas recirculation (EGR) valve connector
 - Rocker arm oil control solenoid connector
 - Rocker arm oil pressure switch connector
 - Oil pressure switch connector
 - Two air fuel ratio (A/F) sensor connectors
 - Two secondary heated oxygen sensor (secondary HO2S) connectors
24. Install the upper radiator hose (A) and lower radiator hose (B).

Fig. 145: Identifying Upper Radiator Hose And Lower Radiator Hose

Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Install the intake manifold (see **INSTALLATION**).
26. Install the alternator (see **INSTALLATION**).
27. Install the power steering (P/S) pump (A) and P/S hose bracket (B).

Fig. 146: Identifying Power Steering (P/S) Pump And P/S Hose Bracket Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Install the drive belt (see **DRIVE BELT REPLACEMENT**).
29. Do the battery terminal reconnection procedure (See **RECONNECTION**).
30. After installation, check that all tubes, hoses and connectors are installed correctly.
31. Check for fuel leaks. Turn the ignition switch ON (II) (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leaks at any point in the fuel line.
32. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 10 **COOLANT REPLACEMENT**).
33. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).
34. Inspect the idle speed (see **IDLE SPEED INSPECTION**).
35. Inspect the ignition timing (see **IGNITION TIMING INSPECTION**).
36. Do the steering column position memorization (see **STEERING COLUMN POSITION MEMORIZATION**).
37. Enter the anti-theft codes for the audio system and navigation system (if equipped).
38. Set the clock (on vehicles without navigation).

CAMSHAFT OIL SEAL INSTALLATION - IN CAR

Special Tools Required

Camshaft oil seal driver 07GAF-SD40330

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Remove the camshaft pulley and back cover (see step 19 on **Cylinder Head Removal**).
3. Remove the camshaft oil seal.
4. Dry the camshaft oil seal housing.
5. Apply a light coat of multipurpose grease to the lip of the camshaft oil seal.
6. Using the camshaft oil seal driver (A), washer (B), and a 12 x 75 x 1.25 mm bolt (C), press in the camshaft oil seal (D) about 0.5-1.5 mm (0.02-0.06 in.) below the surface of the cylinder head.

Fig. 147: Identifying Camshaft Oil Seal Driver, Washer And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Apply new engine oil to the threads of the camshaft pulley mounting bolt. Install the back cover, then install the camshaft pulley (see step 11 on **Camshaft, Rocker Arm Assembly, Camshaft Seal, and Pulley Installation**).
8. Install the timing belt (see **TIMING BELT INSTALLATION**).

SEALING BOLT INSTALLATION

NOTE: When installing the sealing bolt (A), always use a new washer (B).

FRONT:

Fig. 148: Identifying Sealing Bolt With Torque Specification - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR:

Fig. 149: Identifying Sealing Bolt With Torque Specifications - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2007-09 ACCESSORIES AND EQUIPMENT

Dashboard - MDX

DRIVER'S OUTER DASHBOARD TRIM REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the dashboard and its related parts.

1. Open the front door, and remove the driver's dashboard side cover (A).
 1. Pull out the front door opening seal (B), as needed.
 2. Gently pull out the front edge of the side cover, and pry the rear edge with a trim tool to release the hooks (C), then remove the side cover.

Fig. 1: Identifying Driver's Dashboard Side Cover, Front Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Gently pull out the driver's outer dashboard trim (A) to detach the clips.

Fastener Locations

▷ : Clip, 4

Fig. 2: Identifying Driver's Outer Dashboard Trim, Power Mirror Switch Connector And VSA Off Switch Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the power mirror switch connector (B), VSA OFF switch connector (C), and if equipped, headlight washer switch connector (D), then remove the panel.
4. Install the trim in the reverse order of removal, and note these items:
 - Make sure each connector is plugged in properly.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

DRIVER'S INNER DASHBOARD TRIM REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the driver's inner dashboard trim (A).
 1. Gently pull out along the edge beside the audio unit by hand to release the lower hooks (B) and the clip (C).
 2. Detach the upper clips (D).

Fastener Locations

C, D ▷ : Clip, 5

Fig. 3: Identifying Lower Hooks, Upper Clips And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the trim in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Position the hooks first on installation, then move the clips into place.
 - Push the clips and hooks into place securely.

INSTRUMENT FASCIA REMOVAL/ INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Tilt the steering column down, and telescope it out.
2. Remove these items.
 - Driver's outer dashboard trim (see **DRIVER'S OUTER DASHBOARD TRIM REMOVAL/INSTALLATION**)
 - Driver's inner dashboard trim (see **DRIVER'S INNER DASHBOARD TRIM REMOVAL/INSTALLATION**)

3. Remove the instrument fascia (A).
 1. Gently pull out the bottom to release the clips
 2. Disconnect the select/reset switch connector (B).

Fig. 4: Identifying Instrument Fascia And Select/Reset Switch Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the instrument fascia in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Make sure the connector is plugged in properly.
 - Push the clips into place securely.

DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Adjust the steering column upward.
2. Remove these items:
 - Driver's outer dashboard trim (see **DRIVER'S OUTER DASHBOARD TRIM REMOVAL/INSTALLATION**)
 - Driver's inner dashboard trim (see **DRIVER'S INNER DASHBOARD TRIM REMOVAL/INSTALLATION**)

3. Remove the driver's dashboard lower cover (A).
 1. Remove the screw (B).
 2. Pull out the bottom of the driver's dashboard lower cover to release the clips (C).
 3. Disconnect the humidity/in-car temperature sensor connector (D) and the air hose (E).

Fig. 5: Identifying Humidity/In-Car Temperature Sensor Connector And Air Hose
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the cover in the reverse order of removal, and note these items:
 - Make sure the humidity/in-car temperature sensor connector is plugged in properly, and the air hose is connected properly.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the dashboard and its related parts.

1. Remove the driver's dashboard undercover (A).
 1. Turn the lock knob (B) 90°.

2. Gently pull down the rear edge to detach the clip.
3. Disconnect the footwell light connector (C) and ambient light connector (D), then detach the harness clip (E).
4. Pull the undercover away to release the pins (F) from the holders (G).

Fig. 6: Identifying Footwell Light Connector, Ambient Light Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the undercover in the reverse order of removal, and note these items:
 - Replace the clip if it's damaged.
 - Push the clip into place securely.
 - Make sure that each connector is plugged in properly.
 - Make sure the pins on of the cover are securely seated.

CENTER UPPER PANEL REMOVAL/ INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Hold the middle of the center upper panel (A), and pull the panel towards the rear of the vehicle to detach

all of the clips from the dashboard, to release the hooks (B) and pins (C) from the dashboard, and to release the hooks (D) from the center panel (E) and/or the display unit (F) (with navigation system).

Without navigation system

Fig. 7: Identifying Center Upper Panel, Hooks, Pins And Center Panel - Without Navigation System

Courtesy of AMERICAN HONDA MOTOR CO., INC.

With navigation system

Fig. 8: Identifying Center Upper Panel, Hooks, Pins And Center Panel - With Navigation System

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the center speaker connector (G), then remove the center upper panel.
3. Install the cover in the reverse order removal, and note these items:
 - Make sure the center speaker connector is plugged in properly.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

DASHBOARD CENTER PANEL REMOVAL/ INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the center upper panel (see CENTER UPPER PANEL REMOVAL/ INSTALLATION).
2. Pull out the dashboard center panel (A) to detach the clips (B, C, D) and to release the hooks (E) (with navigation system), then remove the panel.

With navigation system

Fastener Locations

B ▷ : Clip, 4 C ▷ : Clip, 2 D ▷ : Clip, 2

Fig. 9: Identifying Dashboard Center Panel, Clips And Hooks - With Navigation System
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Without navigation system

Fig. 10: Identifying Dashboard Center Panel, Clips And Hooks - Without Navigation System
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the hazard warning switch/passenger's airbag off indicator connector (F), and on the models without navigation system, center information display connector (G).

Without navigation system

4. Remove the center information display from the dashboard center panel (see **CENTER INFORMATION DISPLAY INPUT TEST**).
5. If necessary, peel three pieces of adhesive tapes (A, B), then remove the tray mat (C), from the center tray (D).

Adhesive tape A: Thickness 0.5 mm (0.02 in.) Width 15 mm (0.59 in.) Length 50 mm (2.0 in.)

Adhesive tape B: Thickness 0.5 mm (0.02 in.) Width 15 mm (0.59 in.) Length 220 mm (8.66 in.)

Fig. 11: Identifying Adhesive Tapes, Tray Mat And Center Tray

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If necessary, remove the screws (A) securing the center tray (B), then separate it from the dashboard center panel (C) by detaching the clips (D).

Fig. 12: Identifying Screws, Center Tray, Dashboard Center Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the panel in the reverse order of removal, and note these items:
 - If the removed tray mat is to be reinstalled, remove all of old adhesive tape from the mat, and clean the back of the mat with isopropyl alcohol where the three pieces of new adhesive tape are to be attached. Attach the tray mat to the center tray with commercially available adhesive tape.
 - Make sure all connectors are plugged in properly.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Make sure the tabs located between the bottom clips line up with the slots in the dashboard correctly.
 - Push the clips and hooks into place securely.

CENTER POCKET REMOVAL/INSTALLATION

1. Remove the audio unit (see AUDIO UNIT REMOVAL/INSTALLATION).
2. Remove the bolts (A) and screws (B), then remove the radio brackets (C) from both sides of the audio unit (D).

Fastener Locations

A ► : Bolt, 8 B ► : Screw, 2

Fig. 13: Identifying Bolts, Screws, Radio Brackets And Audio Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws, then remove the center pocket (A).

Fastener Locations

► : Screw, 4

Fig. 14: Identifying Center Pocket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the center pocket in the reverse order of removal.

PASSENGER'S DASHBOARD TRIM REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Open the front door, and remove the passenger's dashboard side cover (A).
 1. Pull out the front door opening seal (B), as needed.
 2. Gently pull out the front edge of the side cover, and pry the rear edge with a trim tool to release the hooks (C), then remove the side cover.

Fig. 15: Identifying Passenger'S Dashboard Side Cover, Front Door Opening Seal And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Open the glove box.
3. Remove the passenger's dashboard trim (A).
 1. Remove the screw (B).
 2. Gently pull out the lower edge and the outside edge of the trim by hand to detach all of the clips (C) and hooks (D).

Fig. 16: Identifying Screw, Clips And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the trim in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Position the hooks first on installation, then move the clips into place.
 - Push the clips and hooks into place securely.

GLOVE BOX LOCK CYLINDER REPLACEMENT

NOTE: Take care not to scratch the glove box.

1. Remove the glove box (see **GLOVE BOX REMOVAL/INSTALLATION**).
2. Lift the glove box handle (A), and use a hook-shaped tool to pull one end of the retainer (B) out of its slot.

NOTE: Do not remove the retainer entirely. Leave one end of the retainer in its original position when removing the lock cylinder.

Fig. 17: Identifying Glove Box Handle And Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the glove box lock cylinder (A).

Fig. 18: Identifying Glove Box Lock Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Reinstall the end of the retainer (A) in its slot, then reinstall the lock cylinder (B). Push the cylinder into place securely until the retainer snaps into place.

Fig. 19: Identifying End Of Retainer And Lock Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GLOVE BOX REMOVAL/INSTALLATION

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE: Take care not to scratch the dashboard and its related parts.

1. Remove the passenger's dashboard undercover (see **PASSENGER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
2. Open the glove box.
3. Remove the cap (A), then disconnect the glove box damper (B) from the pivot (C) on the glove box.

Fig. 20: Identifying Cap, Glove Box Damper And Pivot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Close the glove box.
5. Remove the bolts.

Fastener Locations

► : Bolt, 2

Fig. 21: Identifying Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. While holding the glove box (A), release the glove box stop (B) on each side from the dashboard by pushing them in, then remove the glove box.

Fig. 22: Identifying Glove Box And Glove Box Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the bolt, then remove the glove box damper (A).

Fig. 23: Identifying Glove Box Damper With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the glove box in the reverse order of removal.

GLOVE BOX STRIKER REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX) and the precautions and procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or service.

NOTE: Take care not to scratch the dashboard and its related parts.

1. Remove the glove box (see GLOVE BOX REMOVAL/INSTALLATION).
2. Remove the bolt (A) and screws (B), disconnect the glove box light bulb socket (C), and detach the harness clip (D), then remove the glove box striker (E).

Fastener Locations

A ► : Bolt, 1 B ► : Screw, 3

Fig. 24: Identifying Bolt, Screws, Glove Box Light Bulb Socket And Harness Clip With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the striker in the reverse order of removal. Make sure the glove box light bulb socket is connected securely.

PASSENGER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION

NOTE: Take care not to scratch the dashboard and its related parts.

1. Remove the Passenger's dashboard undercover (A).
 1. Gently pull down the rear edge to detach the clips.
 2. Disconnect the footwell light connector (B) and ambient light connector (C).
 3. Pull the undercover away to release the pins (D) from the holders.(E).

Fastener Locations

▷ : Clip, 3

Fig. 25: Identifying Passenger'S Dashboard Undercover, Footwell Light Connector And Ambient Light Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the undercover in the reverse order of removal, and note these items:
 - Replace any damaged clips.
 - Push the clips into place securely.
 - Make sure that each connector is plugged in properly.
 - Make sure the pins of the undercover are installed securely to the holders.

DASHBOARD SIDE VENT REMOVAL/ INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- The driver's side vent is shown; the passenger's side vent is similar.

1. Remove these items:

- A-pillar trim (see TRIM REMOVAL/INSTALLATION - PILLAR AREAS)
- Driver's side: Driver's dashboard outer trim (see DRIVER'S OUTER DASHBOARD TRIM REMOVAL/INSTALLATION)

- Passenger's side: Passenger's dashboard trim (see **CENTER POCKET REMOVAL/INSTALLATION**)

2. Remove the screws (A).

Fastener Locations

A ► : Screw, 3

C ▷ : Clip, 2

Fig. 26: Identifying Screws, Side Vent And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out the side vent (B) to release the clips (C), then remove the vent.
4. Install the side vent in the reverse order of removal, and push the clips into place securely.

SIDE DEFOGGER VENT TRIM REMOVAL/ INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- The driver's side defogger vent trim is shown; the passenger's side defogger vent trim is similar.

1. Insert the trim tool into a gap between the side defogger vent trim (A) and the dashboard (B), and release the hooks (C).

Fig. 27: Identifying Side Defogger Vent Trim, Dashboard And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the side defogger vent trim in the reverse order of removal, and push the hooks into place securely.

FRONT DEFOGGER VENT TRIM REMOVAL/ INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the dashboard and its related parts.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the sunlight sensor (see **SUNLIGHT SENSOR TEST**).
2. Insert the trim tool into a gap between the front defogger vent trim (A) and the dashboard (B), and release all of the hooks (C).

Fig. 28: Identifying Front Defogger Vent Trim, Dashboard And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the front defogger vent trim in the reverse order of removal, and push the hooks into place securely.

COLUMN COVER REMOVAL/INSTALLATION

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the column covers.
- Do not pry the cover surface with any tools.

1. Adjust the steering column to full tilt down position and to the full telescopic pull position.
2. Remove the cover (A).

Fig. 29: Identifying Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the tab (A) locating on the right side of the upper column cover (B) with your finger.

Fig. 30: Identifying Tab And Upper Column Cover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the left tab (C) of the upper column cover while pushing the lower column cover (D) from the right side.
5. With the right side of the upper column cover (A) slightly apart from the lower column cover (B), release the tab (C) located on the left side of the upper column cover with your finger.

Fig. 31: Identifying Upper Column Cover, Lower Column Cover And Tab
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the cover by lightly pulling it up by releasing the left side tab (D) and the front tabs (E) of the upper column cover.

NOTE: Carefully release the tabs, and note the hooks (F) may break when the upper column cover is pulled up too hard.

7. Remove the three screws (A, B) and disconnect the tilt/telescopic switch connector (C), then remove the lower column cover (D).

Fig. 32: Identifying Screws, Tilt/Telescopic Switch Connector And Lower Column Cover With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the upper and lower column cover in the reverse order of removal, and note these items:
 - Make sure the tilt/telescopic switch connector is plugged in properly.
 - Push the hooks into place securely.

DASHBOARD REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP20H *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE: • Put on gloves to protect your hands.

- Take care not to scratch the dashboard, body, and other related parts.
- Take care not to bend the brackets.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Do the battery terminal disconnection procedure(See **DISCONNECTION** .
2. Remove these items from the dashboard:
 - Driver's outer dashboard trim (see **DRIVER'S OUTER DASHBOARD TRIM REMOVAL/INSTALLATION**)
 - Driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**)
 - Driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**)
 - Passenger's dashboard undercover (see **PASSENGER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**)
 - Glove box and damper (see **GLOVE BOX REMOVAL/INSTALLATION**)
 - Glove box striker (see **GLOVE BOX STRIKER REPLACEMENT**)
 - Center upper panel (see **CENTER UPPER PANEL REMOVAL/ INSTALLATION**)
 - Center panel (see **DASHBOARD CENTER PANEL REMOVAL/ INSTALLATION**)
 - Center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**)
 - A-pillar trim, both sides (see **TRIM REMOVAL/INSTALLATION - PILLAR AREAS**)
 - Tweeter, both sides (see **TWEETER**)
 - Instrument fascia (see **DRIVER'S INNER DASHBOARD TRIM REMOVAL/INSTALLATION**)
 - Gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**)
 - Sunlight sensor (see **SUNLIGHT SENSOR TEST**)
 - Display unit, with navigation system (see **DISPLAY UNIT REMOVAL/INSTALLATION**)
 - GPS antenna (see **GPS ANTENNA REMOVAL/INSTALLATION**)
3. Adjust the steering column to full tilt down position and to the full telescopic pull position.
4. Remove the screws (A, B), then remove the driver's dashboard lower bracket (C) and the dashboard lower bracket (D).

Fig. 33: Identifying Screws, Driver's Dashboard Lower Bracket And Dashboard Lower Bracket
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the parking brake lever mounting bolts (A, B), then lower the lever.

Fig. 34: Identifying Parking Brake Lever Mounting Bolts With torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. From the front of the dashboard, detach the harness clip (A).

Fig. 35: Identifying Harness Clip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Detach the connectors (A) from the dashboard duct in the center upper panel opening. Pull the sunlight sensor connector (B) out through the hole (C) in the dashboard.

Fig. 36: Identifying Connectors, Sunlight Sensor Connector And Hole

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect and detach the passenger's airbag connector (A) from the steering hanger beam, and detach the dashboard wire harness clip (B). Remove the passenger's airbag mounting bolts.

Fastener Locations

► : Bolt, 2

Fig. 37: Identifying Passenger'S Airbag Connector And Dashboard Wire Harness Clip With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. From the front of the dashboard, remove the screws securing the dashboard (A).

Fastener Locations

► : Screw, 9

Fig. 38: Identifying Screws With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Wrap the steering wheel with a shop towel to prevent damage.
11. Lift up on the dashboard (A). With an assistant holding the dashboard up, detach the dashboard wire harness clips (B) from both sides of the dashboard duct.

Fig. 39: Identifying Dashboard And Dashboard Wire Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. With the help of an assistant, remove the dashboard (A).
 1. Lift up on the dashboard to release it from the guide pins (B).
 2. Lift up on the dashboard until the driver's outside portion will be higher than the steering column.
 3. While carefully moving the driver's outside portion of the dashboard over the steering column, rotate the dashboard toward the front passenger's door opening, and lower the passenger's side.
 4. Remove the dashboard through the passenger's door opening.

NOTE: Lay the dashboard on its front or back. Do not rest it on the lower console opening or you may damage it.

Fig. 40: Identifying Dashboard And Guide Pins

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. From the front of the dashboard, remove the screws securing the dashboard duct (A).

Fastener Locations

► : Screw, 2

**Fig. 41: Identifying Screws Securing Dashboard Duct**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. From the back of the dashboard, remove the dashboard duct (A) from the dashboard (B).

Fastener Locations

► : Screw, 11

**Fig. 42: Identifying Dashboard Duct And Dashboard**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the dashboard in the reverse order of removal, and note these items:
- Before tightening the bolts, make sure the dashboard wire harness is not pinched.

- Make sure the dashboard fits onto the guide pins correctly.
- Replace the passenger's airbag mounting bolts with new ones.
- Make sure the connectors are plugged in properly.
- Do the battery terminal reconnection procedure (See **RECONNECTION**).
- Check for any DTCs that may have been set during repairs, and clear them.

DASHBOARD/STEERING HANGER BEAM REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **Have an assistant help you when removing and installing the dashboard.**
- **Take care not to scratch the dashboard, body and other related parts.**

1. Do the battery terminal disconnection procedure(See **DISCONNECTION** , and wait at least 3 minutes before beginning work.
2. Remove these items:
 - Driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**)
 - Driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**)
 - Passenger's dashboard undercover (see **PASSENGER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**)
 - Center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**)
 - Glove box (see **GLOVE BOX REMOVAL/INSTALLATION**)
 - Driver's dashboard outer trim (see **DRIVER'S OUTER DASHBOARD TRIM REMOVAL/INSTALLATION**)
 - Driver's dashboard lower bracket and dashboard lower bracket (see step 4)
 - Kick panels, both sides (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**)
 - A-pillar trim, both sides (see **TRIM REMOVAL/INSTALLATION - PILLAR AREAS**)
 - A-pillar corner trim (see **A-PILLAR CORNER TRIM REPLACEMENT**)

- Steering column covers (see **COLUMN COVER REMOVAL/INSTALLATION**)
3. Disconnect the combination switch connectors, ignition switch connectors, driver's airbag connector, cable reel connector, steering angle sensor connector, immobilizer control unit connector, tilt/telescopic motor connectors, and tilt/ telescopic control unit connectors, detach the harness clips and remove the mounting bolts, then lower the steering column (see **STEERING COLUMN REMOVAL AND INSTALLATION**). To prevent damage to the steering column, wrap it with a shop towel.
 4. Remove the parking brake lever mounting bolt and screw, then lower the lever (see step 5).

Driver's side

5. Disconnect the roof wire harness connector (A).

Fig. 43: Identifying Roof Wire Harness Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. From under the dash, disconnect the left engine compartment wire harness connectors (A), floor wire harness connector (B), parking brake switch connector (C), and dashboard wire harness connectors (D) from the driver's under-dash fuse/ relay box (E), detach the fuse connector (F), and then release the wire harness clips (G).

NOTE: **Lift the large wire harness connector locks (H) before trying to remove the connectors from the fuse/relay box.**

Fig. 44: Identifying Wire Harness Connectors, Floor Wire Harness Connector, Parking Brake Switch Connector And Dashboard Wire Harness Connectors
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Middle portion

7. Detach the harness clips (A), and disconnect the SRS unit connectors (B), GPS antenna connector (C) (with navigation system), yaw rate-lateral acceleration sensor connector (D), A/C wire harness connectors (E), and floor wire harness connector (F).

Fig. 45: Identifying Clips, SRS Unit Connectors, GPS Antenna Connector And Yaw Rate-Lateral Acceleration Sensor Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the floor wire harness connector(s) (A), rear mode control motor connector (B), rear evaporator temperature sensor connector (C), rear air mix control motor connector (D), rear power transistor connector (E), and rear blower motor connector (F). Detach the harness clips (G).

Fig. 46: Identifying Floor Wire Harness Connector, Rear Mode Control Motor Connector And Rear Evaporator Temperature Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

9. With rear entertainment system: Disconnect the RES wire harness connectors (A).

Fig. 47: Identifying RES Wire Harness Connectors - Passenger'S Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. From under the dash, disconnect the passenger's door wire harness connector (A), the floor wire harness connectors (B), stereo amplifier connectors (C), right engine compartment wire harness connectors (D), and AM/FM antenna sublead connector (E).

Fig. 48: Identifying Passenger'S Door Wire Harness Connector, Floor Wire Harness Connectors And Stereo Amplifier Connectors
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the bolts (A, B) securing the dashboard (C) and center bracket (D).

Fig. 49: Identifying Bolts, Dashboard And Center Bracket With torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Open the driver's door, and remove the bolts (A, B, C). Remove the remaining bolts (D, E, F) securing the dashboard (G).

Fastener Locations

Fig. 50: Identifying Bolts And Dashboard With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Lift up on the dashboard (A) to release it from the guide pins (B, C).

Fig. 51: Identifying Dashboard And Guide Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Carefully remove the dashboard through either front door opening.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Dashboard - MDX

NOTE: **Do not rest the dashboard on its lower center cover opening, or it may be damaged. Lay it on its front or back.**

15. Remove the center bracket (D).
16. Install the dashboard in the reverse order of removal, and note these items:
 - Position the center bracket on the body, then reinstall the dashboard on the body. After tightening the dashboard mounting bolts, tighten the center bracket mounting bolts, and then tighten the center frame mounting bolts.
 - Make sure the dashboard fits onto the guide pins correctly.
 - Before tightening the bolts, make sure the wire harnesses are not pinched.
 - Make sure the connectors are plugged in properly.
 - Do the battery terminal reconnection procedure (See **RECONNECTION** .
 - Check for any DTCs that may have been set during repairs, and clear them.

2007-09 ACCESSORIES AND EQUIPMENT

Rear Window Defogger-MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Rear Window Defogger Component Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

CIRCUIT DIAGRAM

Fig. 2: Rear Window Defogger - Circuit Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUNCTION TEST

Before troubleshooting the rear window defogger circuit, perform multiplex integrated control system troubleshooting using B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

NOTE:

- Be careful not to scratch or damage the defogger wires with the tester probe.
- Before testing, check the No. 30 (10 A) fuse in the under-dash fuse/relay box and the No. 10 (30 A) fuse in the rear fuse/relay box.

1. Measure the voltage between the positive terminal (A) and body ground with the ignition switch and defogger switch ON.

There should be battery voltage.

- If there is no voltage, check for:
 - Faulty rear window defogger relay.
 - Faulty rear MICU.
 - Faulty climate control unit.
 - An open in the RED wire to the positive terminal.
- If there is voltage, go to step 2.

Fig. 3: Identifying Positive Terminal And Negative Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the negative terminal (B) from the rear window defogger.
3. Check for continuity between the negative terminal and body ground.

If there is no continuity, check for an open in the wire or poor ground (G701). If there is continuity, go to step 4.

4. Reconnect the negative terminal to the rear window defogger.
5. Turn the ignition switch ON (II) and the rear window defogger switch ON.

6. Touch the voltmeter positive probe to the each points on each defogger wire, and the negative probe to the negative terminal.
 - If the voltage is as specified, the defogger wire up to that point is OK.
 - If the voltage is not as specified, repair the defogger wire.

DEFOGGER WIRE REPAIR

NOTE: To make an effective repair, the broken section must be no longer than 1 inch (25 mm).

1. Lightly rub the area around the broken section (A) with fine steel wool, then clean it with isopropyl alcohol.

Fig. 4: Identifying Broken Section, Defogger Wire And Cellophane Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully mask above and below the broken portion of the defogger wire (B) with cellophane tape (C).
3. Using a small brush, apply a heavy coat of silver conductive paint (commercially available) extending about 1/8" on both sides of the break. Allow 25 minutes to dry.

Fig. 5: Applying Heavy Coat Of Silver Conductive Paint

FRONT DOOR PANEL REMOVAL/INSTALLATION

Special Tools Required

- KTC trim tool set SOJATP2014 *
- Trim pad remover, Snap-on A 177A or equivalent, commercially available

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE: Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Using a trim tool, push on the upper hook (A) and pivot the inner handle cap (B) on the bottom hooks (C), then remove the cap and the screw securing the inner handle (D).

Fastener Locations

► : Screw, 2

Fig. 7: Identifying Upper Hook, Inner Handle Cap, Bottom Hooks And Inner Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pry out the bottom edge of the grip cover (A) at the notches with the trim tool to detach the clips and to release the hooks (B). Then remove the cover.

Fastener Locations

▷ : Clip, 5

Fig. 8: Identifying Grip Cover And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws.

Fastener Locations

▶ : Screw, 2

Fig. 9: Identifying Screws

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the door panel (A) with as little bending as possible to avoid creasing or breaking it.
 1. Start at the bottom edge of the door panel, release the clips with a commercially available trim pad remover.
 2. Detach the upper clips.
 3. Starting at the rear, pull the door panel upward.

NOTE:

The inner handle cable (B) and latch cable (C) are connected to the inner handle (D). Do not pull the door panel up too far, or these

cables will be damaged.

Fastener Locations

▷ : Clip, 11
(Gray)

Fig. 10: Identifying Inner Handle Cable, Latch Cable And Inner Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the inner handle (A) from the door panel:
 1. Hold the door panel (8) away from the door.
 2. Pull on the front of the inner handle to detach the first clip. Keep pulling until the rest of the clips are detached, then remove the handle.

Fig. 11: Identifying Door Panel And Inner Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the door subharness connector (A) and power mirror switch connector (B), then remove the door panel (C).

Fig. 12: Identifying Door Subharness Connector, Power Mirror Switch Connector And Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the latch cable fastener (A) from the inner handle (B), and then disconnect the latch cable (C) from the cable fastener (D). Disconnect the inner handle cable (E) from the cable fastener (F), then remove the inner handle.

NOTE: Check if the cable fasteners are damaged or stress-whitened.

Fig. 13: Identifying Latch Cable Fastener, Inner Handle, Latch Cable And Cable Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the power window switch connector (A), and on the driver's side, disconnect the power door lock switch connector (B) and the seat position memory switch connector (C).

Fig. 14: Identifying Power Window Switch Connector, Power Door Lock Switch Connector And Seat Position Memory Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the screws, then remove the grip (A), armrest assembly (B), armrest cover (C), and the wood trim (D) from the door panel (E).

Fig. 15: Identifying Grip, Armrest Assembly, Armrest Cover And Wood Trim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the screws (A, B), then separate the armrest (C), the power window switch panel (D), and the power window switch (E).

Fig. 16: Identifying Screws, Armrest, Power Window Switch Panel And Power Window Switch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the door panel in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Replace any damaged cable fasteners with new ones.
 - The latch cable (A) should be fixed to the cable fastener (B) with the latch in the locked position as shown.
 - Make sure the connectors are plugged in properly, and the cables are connected securely.
 - Make sure the window and power door lock operate properly.

Fig. 17: Identifying Latch Cable And Fastener

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR OUTER HANDLE REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Raise the glass fully.
2. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
3. Disconnect the power door lock actuator connector (A).

Fig. 18: Identifying Power Door Lock Actuator Connector, Plug Cap And Plastic Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the plug cap (B), then remove the plastic cover (C), as needed.

NOTE: Remove the glue from the door surface. If the plastic cover is damaged or torn, replace it.

5. Detach the rod fastener (A) from the outer handle.

Fig. 19: Identifying Rod Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. With a clip remover, disconnect the outer handle rod (A).

Fig. 20: Identifying Outer Handle Rod

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driver's side: Pull both side flanges (A) of the retainer (B) outward, and pull the middle flange portion (C) of the outer casing cover (D) out, then disconnect the cylinder cable (E) from the latch.

Fig. 21: Identifying Side Flanges, Retainer, Middle Flange Portion And Outer Casing Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the bolt, then remove the spacer (A).

Fig. 22: Identifying Spacer With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the maintenance cap (A). Remove the bolt securing the outer handle protector (B), then remove the protector by releasing the hook (C).

Fig. 23: Identifying Maintenance Cap, Outer Handle Protector And Hook With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. If necessary, cut a slot in each screw head of the special screws with a saw, remove the special screws with a flat-tip screwdriver, then separate the door cylinder (A) and outer handle protector (B). If the retainer (C) is damaged, release the hooks (D), and replace it.

NOTE: If removed, the special screws must be replaced.

Fastener Locations

► : Screw, 2

Fig. 24: Identifying Door Cylinder, Outer Handle Protector And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. While pulling the outer handle (A), remove the handle from the holes in the door panel. Take care not to scratch the door.

Fig. 25: Identifying Outer Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the rod fastener (A) from the outer handle (B), then replace it with a new one.

Fig. 26: Identifying Rod Fastener And Outer Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the handle in the reverse order of removal, and note these items:
 - Make sure that the actuator connector is plugged in properly, and that the cylinder cable and the outer handle rod are connected securely.
 - Make sure the door key cylinder/door locks operate properly.
 - Make sure the door handle works properly.
 - When reinstalling the door panel, make sure the plastic cover is installed properly and sealed around its outside perimeter to seal out water.

FRONT DOOR LATCH REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Raise the glass fully.
2. Remove the door panel and inner handle (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
3. Remove the plastic cover, as needed (see step 3).
4. Detach the rod fastener (see step 5).
5. Disconnect the outer handle rod from the outer handle (see step 6).
6. Disconnect the cylinder cable from the latch (see step 7).
7. Pull the glass run channel (A) away as needed, and remove the bolt, then remove the center lower channel (B) by pulling it downward.

Fastener Location

► : Bolt, 1

Fig. 27: Identifying Glass Run Channel And Center Lower Channel With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the screws (A, B) securing the latch (C), then remove the latch through the hole in the door. Take care not to bend the outer handle rod (D), latch cable (E), and inner handle cable (F).

Fastener Locations

A ► : Screw, 3 B ► : Screw, 1

Fig. 28: Identifying Screws, Latch, Outer Handle Rod, Latch Cable And Inner Handle Cable With Torque Specifications

9. Remove the screw, then remove the latch protector (A) by releasing the hook (B).

Fastener Location

► : Screw, 1

**Fig. 29: Identifying Latch Protector And Hook**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Detach the latch cable (A) and the inner handle cable (B) from the latch (C).

Fig. 30: Identifying Latch Cable, Inner Handle Cable And Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the latch in the reverse order of removal, and note these items:
 - Make sure that the actuator connector is plugged in properly, and that the cylinder cable and the outer handle rod are connected securely.
 - Make sure the door locks and opens properly.
 - When reinstalling the door panel, make sure the plastic cover is installed properly and sealed around its outside perimeter to seal out water.

FRONT DOOR GLASS AND REGULATOR REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the power door lock actuator connector (A), and remove the plug caps (B).

Fig. 31: Identifying Power Door Lock Actuator Connector And Plug Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pass the cables (C) and the harnesses (D) through the slits (E) in the plastic cover (F), then remove the plastic cover.

NOTE: Remove the glue from the door surface. If the plastic cover is damaged or torn, replace it.

4. Carefully raise the glass (A) until you can see the bolts, then remove them. Carefully pull the glass out through the window slot. Take care not to drop the glass inside the door.

Fastener Locations

► : Bolt, 2

(Silver)

D ► : Bolt, 2
(Black)

6 x 1.0 mm
9.8 N·m (1.0 kgf-m, 7.2 lbf-ft)

Fig. 33: Identifying Connector And Regulator With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the bolts (C), and loosen the bolts (D), then remove the regulator through the hole in the door.
7. Apply multipurpose grease to all the sliding surfaces of the regulator (A) where shown.

Fig. 34: Identifying Regulator And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the glass and regulator in the reverse order of removal, and note these items:
 - Roll the glass up and down to see if it moves freely without binding.
 - Make sure that there is no clearance between the glass and glass run channel when the glass is closed.
 - Adjust the position of the glass as necessary (see **FRONT AND REAR DOOR GLASS ADJUSTMENT**).
 - Do the power window control unit reset procedure (see **RESETTING THE POWER WINDOW CONTROL UNIT**).
 - Check for water leaks (see step 7).
 - Test-drive and check for wind noise and rattles.
 - When reinstalling the door panel, make sure the plastic cover is installed properly and sealed around its outside perimeter to seal out water.
 - Make sure the power door locks, windows and power mirror operate properly.

FRONT DOOR SASH INNER TRIM REPLACEMENT

NOTE: Take care not to scratch the door.

1. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Using a clip remover, detach the clips fastening the front door sash inner trim (A).

Fastener Locations

▷ : Clip, 2

Fig. 35: Identifying Front Door Sash Inner Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull the door glass opening side of the trim back to release the hooks (B, C) from the door glass opening flange of the door sash.
4. Install the trim in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the hooks and clips into place securely.

FRONT DOOR SASH OUTER TRIM REPLACEMENT

NOTE: Take care not to scratch the door.

1. Lower the glass fully.
2. Remove the door sash outer trim (A).
 1. Pull back the door weatherstrip (B), then remove the screw.
 2. Pull the trim up to release the hooks (C) from the door. Take care not to damage the door glass outer weatherstrip (D).

Fastener Location

► : Screw, 1

Fig. 36: Identifying Door Weatherstrip, Door Sash Outer Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and make sure the glass run channel (E) is installed in the door sash securely.

FRONT DOOR GLASS OUTER WEATHERSTRIP REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- If you remove the door glass outer weatherstrip, replace it with a new one because it will bend.
- Put on gloves to protect your hands.
- Take care not to scratch the door.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Remove the screw from the rear edge of the door.

Fastener Location

► : Screw, 1

Fig. 37: Identifying Screw

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Starting at the rear, pull the door glass outer weatherstrip (A) up at each portion where the inner molding (B) catches the inside edge of the window slot.

Fig. 38: Identifying Door Glass Outer Weatherstrip And Inner Molding

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull the rear of the glass outer weatherstrip (A) away from the door, then pull the front end of it out from under the power mirror (B).

Fig. 39: Identifying Glass Outer Weatherstrip And Power Mirror
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install new weatherstrip in the reverse order of removal.

FRONT DOOR OUTER MOLDING REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- If you remove the door outer molding, replace it with a new one because it will bend during removal.
- Put on gloves to protect your hands.
- Take care not to scratch the door.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the power mirror (see **POWER MIRROR REPLACEMENT**).
2. Remove the door outer molding (A):
 1. Push out the rear clip (B).
 2. While removing the upper edge of the door outer molding from the edge of the sash, cut the double-sided adhesive tape (C) with a utility knife, then remove the molding.

Fig. 40: Identifying Door Outer Molding, Rear Clip And Double-Sided Adhesive Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Scrape off the remaining double-sided adhesive tape from the sash, then clean the sash surface with a sponge dampened in isopropyl alcohol.
4. Install new door outer molding in the reverse order of removal, and note these items:
 - Push the clip and the adhesive portions into place securely.
 - Make sure the upper and lower sides of the molding are catching the edges of the sash properly.

FRONT DOOR WEATHERSTRIP REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the door.
- Use a clip remover to remove the clips.

1. At the A-pillar, remove the door checker mounting bolt (A).

Fastener Locations

▷ : Clip, 12
(Black)

Fig. 42: Identifying Door Side Sill Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the side sill seal in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.
 - Check for water leaks (see step 7).

REAR DOOR PANEL REMOVAL/INSTALLATION

Special Tools Required

- KTC trim tool set SOJATP2014 *
- Trim pad remover, Snap-on A 177A or equivalent, commercially available

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE: Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Using a trim tool, push on the upper hook (A) and pivot the inner handle cap (B) on the bottom hooks (C), then remove the cap and the screws securing the inner handle (D).

Fastener Locations

► : Screw, 2

Fig. 43: Identifying Upper Hook, Inner Handle Cap, Bottom Hooks And Inner Handle
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pry out the bottom edge of the grip cover (A) at the notches with the trim tool to detach the clips and to release the hooks (B). Then remove the cover.

Fastener Locations

▷ : Clip, 5

Fig. 44: Identifying Grip Cover And Hooks
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws.

Fastener Locations

► : Screw, 2

Fig. 45: Identifying Screws

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the door panel (A) with as little bending as possible to avoid creasing or breaking it.
 1. Start at the bottom edge of the door panel, release the clips with a commercially available trim pad remover.
 2. Detach the upper clips.
 3. Starting at the rear, pull the door panel upward.

NOTE: The inner handle cable (B) and latch cable (C) are connected to the inner handle (D). Do not pull the door panel up too far, or the cables will be damaged.

Fastener Locations

▷ : Clip, 11
(Gray)

Fig. 46: Identifying Inner Handle Cable, Latch Cable And Inner Handle

6. Disconnect the power window switch connector (A) and courtesy light connector (B), detach the harness clips (C), then remove the door panel (D).

Fig. 48: Identifying Power Window Switch Connector, Courtesy Light Connector, Clips And Door Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the latch cable fastener (A) from the inner handle (B), and then disconnect the latch cable (C) from the cable fastener (D). Disconnect the inner handle cable (E) from the cable fastener (F), then remove the inner handle.

NOTE: Check if the cable fasteners are damaged or stress-whitened.

Fig. 49: Identifying Latch Cable Fastener, Inner Handle, Latch Cable And Cable Fastener

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the screws and release the hooks (A), then remove the wood trim (B), the door grip (C), armrest cover (D) and the armrest assembly (E) from the door panel (F).

Fig. 50: Identifying Hooks, Wood Trim, Door Grip, Armrest Cover And Armrest Assembly
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the screws (A, B) and release the pins (C), then separate the armrest (D), the power window switch panel (E), and the power window switch (F).

Fastener Locations

A ▶ : Screw, 3 B ▶ : Screw, 3

Fig. 51: Identifying Screws, Pins, Armrest, Power Window Switch Panel And Power Window Switch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the door panel in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Replace any damaged cable fasteners with new ones.
 - The latch cable (A) should be fixed to the cable fastener (B) with the latch in the locked position as shown.
 - Make sure the connectors are plugged in properly, and the cables are connected securely.
 - Make sure the window and power door lock operate properly.

Fig. 52: Identifying Latch Cable And Fastener

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR OUTER HANDLE REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Raise the glass fully.
2. Remove the door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**).
3. Detach the harness clip (A), and disconnect the power door lock actuator connector (B).

**Fig. 53: Identifying Harness Clip, Power Door Lock Actuator Connector And Rear Plug Cap**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the rear plug cap (C), then remove the plastic cover (D), as needed.

NOTE: Remove the glue from the door surface. If the plastic cover is damaged or torn, replace it.

5. Detach the rod fastener (A).

Fig. 54: Identifying Rod Fastener

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the maintenance cap (A) with a clip remover, then disconnect the outer handle rod (B) from the outer handle (C).

Fig. 55: Identifying Maintenance Cap, Outer Handle Rod And Outer Handle

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the screws (A, B) securing the latch (C), then lower it.

Fig. 56: Identifying Screws And Latch With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the bolt, then remove the spacer (A).

Fig. 57: Identifying Spacer With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the bolt securing the outer handle protector (A), then remove the protector by releasing the hook (B).

Fastener Location**► : Bolt, 1**

5. Detach the rod fastener (see step 5).
6. Disconnect the outer handle rod from the outer handle (see step 6).
7. Remove the bolt, then remove the collar (A) from the rear lower channel (B).

Fastener Location

► : Bolt, 1

Fig. 62: Identifying Collar And Rear Lower Channel With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the latch (A) out from between the rear lower channel (B) and the door. Take care not to bend

the outer handle rod (C), latch cable (D), and inner handle cable (E).

Fig. 63: Identifying Latch, Rear Lower Channel, Outer Handle Rod, Latch Cable And Inner Handle Cable

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the screw, then remove the latch protector (A) by releasing the hook (B).

Fig. 64: Identifying Latch Protector And Hook

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Detach the latch cable (A) and the inner handle cable (B) from the latch (C).

Fig. 65: Identifying Latch Cable, Inner Handle Cable And Latch
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the latch in the reverse order of removal, and note these items:
 - Make sure the actuator connector is plugged in properly, and the outer handle rod is connected securely.
 - Make sure the door locks and opens properly.

REAR DOOR GLASS AND REGULATOR REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Remove the door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**).
2. Detach the harness clip (A), and disconnect the power door lock actuator connector (B). Remove the plug caps (C).

Fig. 66: Identifying Harness Clip, Power Door Lock Actuator Connector, Plug Caps And Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pass the cables (D) and the harnesses (E) through the slits (F) in the plastic cover (H), then remove it.

NOTE: Remove the glue from the door surface. If the plastic cover is damaged or torn, replace it.

4. Carefully move the glass (A) until you can see the bolts, then remove them. Release the glass from the holder (B), then remove it from the regulator (C), and carefully lower the glass. Take care not to drop the glass inside the door.

Fastener Locations

► : Bolt, 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the bolts (C), and loosen the bolt (D), then remove the regulator through the hole in the door.
11. Apply multipurpose grease to all the sliding surfaces of the regulator (A) where shown.

Fig. 73: Identifying Regulator Dimension

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the glass and regulator in the reverse order of removal, and note these items:
 - Roll the glass up and down to see if it moves freely without binding.
 - Make sure that there is no clearance between the glass and glass run channel when the glass is closed.
 - Adjust the position of the glass as necessary (see **FRONT AND REAR DOOR GLASS ADJUSTMENT**).
 - Do the power window control unit reset procedure (see **RESETTING THE POWER WINDOW CONTROL UNIT**).
 - Check for water leaks (see step 7).
 - Test-drive and check for wind noise and rattles.
 - When reinstalling the door panel, make sure the plastic cover is installed properly and sealed around its outside perimeter to seal out water.

REAR DOOR SASH INNER TRIM REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the door.

1. Remove the door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**).
2. Using a clip remover, detach the clips fastening the rear door sash inner trim (A).

Fastener Locations

▷ : Clip, 2

Fig. 74: Identifying Rear Door Sash Inner Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull the door glass opening side of the trim back to release the hooks (B) from the door glass opening flange of the door sash.
4. Install the trim in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the hooks and clips into place securely.

REAR DOOR SASH OUTER TRIM REPLACEMENT

NOTE: Take care not to scratch the door.

1. Lower the glass fully.
2. Using a clip remover, detach the clips fastening the door weatherstrip (A) from the door sash outer trim (B).

Fastener Locations

▷ : Clip, 5

Fig. 75: Identifying Door Weatherstrip And Door Sash Outer Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the door sash outer trim (A).
 1. Pull back the door weatherstrip (B), then remove the screw.
 2. Pull the trim up to release the hooks (C) from the door. Take care not to damage the door glass outer weatherstrip (D).

Fastener Location

► : Screw, 1

Fig. 76: Identifying Door Sash Outer Trim, Door Weatherstrip And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the trim in the reverse order of removal, and note these items:
 - Make sure the glass run channel (E) is installed in the door sash securely.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

REAR DOOR REAR SASH OUTER TRIM REPLACEMENT

NOTE: Take care not to scratch the door.

1. Lower the glass fully.
2. Remove the door rear sash outer trim (A).
 1. Pull back the door weatherstrip (B), then remove the screw.
 2. Pull the trim up to release the hooks (C) from the door. Take care not to damage the door glass outer weatherstrip (D).

Fig. 77: Identifying Door Weatherstrip, Door Rear Sash Outer Trim And Door Glass Outer Weatherstrip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and make sure the glass run channel (E) is installed in the door sash securely.

REAR DOOR GLASS OUTER WEATHERSTRIP REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- If you remove the door glass outer weatherstrip, replace it with a new one because it will bend.
- Put on gloves to protect your hands.
- Take care not to scratch the door.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the door panel (see REAR DOOR PANEL REMOVAL/INSTALLATION).
2. Remove the screws from both side edges of the door.

Fastener Locations

► : Screw, 2

Fig. 78: Identifying Screws

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Starting at the rear, pull the door glass outer weatherstrip (A) up at each portion where the inner molding (B) catches the inside edge of the window slot.

Fig. 79: Identifying Door Glass Outer Weatherstrip And Inner Molding

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the door glass outer weatherstrip (A).

Fig. 80: Identifying Door Glass Outer Weatherstrip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install a new weatherstrip in the reverse order of removal.

REAR DOOR OUTER MOLDING REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014*

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- If you remove the door outer molding, replace it with a new one because it will bend during removal.
- Put on gloves to protect your hands.
- Take care not to scratch the door.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Release the rear clip (A).

Fig. 81: Identifying Rear Clip, Door Outer Molding And Double-Sided Adhesive Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While removing the upper edge of the door outer molding (B) from the edge of the sash, cut the double-sided adhesive tape (C) with a utility knife, release the front clip (D), then remove the molding.
3. Scrape off the remaining double-sided adhesive tape from the sash, then clean the sash surface with a sponge dampened in isopropyl alcohol.
4. Install a new door outer molding in the reverse order of removal, and note these items:
 - Push the clips and the adhesive portions into place securely.

- Make sure the upper and lower sides of the molding are catching the edges of the sash properly.

REAR DOOR WEATHERSTRIP REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the door.
- Use a clip remover to remove the clips.

1. At the B-pillar, remove the door checker mounting bolt (A).

Fig. 82: Identifying Door Checker Mounting Bolt And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the clips (B, C, D, E), then remove the door weatherstrip (F).

3. Install the weatherstrip in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Apply medium strength type liquid thread lock to the door checker mounting bolt before installation.
 - Check for water leaks (see step 7).

REAR DOOR SIDE SILL SEAL REPLACEMENT

NOTE:

- Take care not to scratch the door.
- Use a clip remover to remove the clips.

1. Detach the clips, then remove the door side sill seal (A).

Fastener Locations

▷ : Clip, 8
(Black)

Fig. 83: Identifying Door Side Sill Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the side sill seal in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.
 - Check for water leaks (see step 7).

FRONT AND REAR DOOR GLASS ADJUSTMENT

NOTE:

Check the weatherstrip and glass run channel for damage or deterioration, and replace them if necessary.

1. Place the vehicle on a firm, level surface.
2. Remove these items:
 - Door panel:
 - Front door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)

- Rear door (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
 - Plastic cover:
 - Front door (see step 3)
 - Rear door (see step 3)
3. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.

Front

Fig. 84: Identifying Glass And Glass Mounting Bolts - Front With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

Fig. 85: Identifying Glass And Glass Mounting Bolts - Rear With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Push the glass against the channel (C), then tighten the glass mounting bolts.
5. Check that the glass moves smoothly.
6. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 86: Identifying Glass And Glass Run Channel
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:
 - Use a 12 mm (1/2 in.) diameter hose (A).
 - Adjust the rate of water flow as shown (B).
 - Do not use a nozzle.
 - Hold the hose about 300 mm (12 in.) away from the door (C).

Fig. 87: Identifying Water Leakage

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Attach the plastic cover, making sure it is sealed around its outside perimeter to seal out water, then install the door panel:
 - Front door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
 - Rear door (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)

FRONT AND REAR DOOR POSITION ADJUSTMENT

NOTE: Check for a flush fit with the body, then check for equal gaps between the front, rear, and bottom door edges and the body. Check that the door and body edges are parallel.

1. Place the vehicle on a firm, level surface when adjusting the doors.
2. Adjust at the hinges (A):
 - Pad a floor jack (B) with shop towels (C), then use the jack to support the door to prevent damage to the door while adjusting it.
 - On the front door: Remove the front inner fender (see **FRONT INNER FENDER REPLACEMENT**). Loosen the hinge mounting bolts (D) slightly, and move the door backward or forward, up or down as necessary to equalize the gaps.
 - On the rear door: Loosen the hinge mounting bolts (E) slightly, and move the door backward or forward, up or down as necessary to equalize the gaps.

Front door

Fig. 88: Identifying Floor Jack, Shop Towels And Hinge Mounting Bolts - Front Door With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear door

Fig. 89: Identifying Floor Jack, Shop Towels And Hinge Mounting Bolts - Rear Door With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, replace the door mounting bolts with the adjusting bolts (P/N 90102-SFA-305) made specifically for door adjustment, then adjust at the door: Loosen the door mounting bolts (F) slightly, and move the door up or down as necessary to equalize the gaps, and move it in or out until it's flush with the body.
4. Check that the door and body edges are parallel. If necessary, adjust the door cushions (A) to make the rear of the doors flush with the body.

Fig. 90: Identifying Door Cushions

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Apply touch-up paint to the hinge mounting bolts, and around the hinges.
6. Check for water leaks (see step 7).

FRONT AND REAR DOOR STRIKER ADJUSTMENT

Make sure the door latches securely without slamming it. If necessary, adjust the striker (A): The striker nuts are fixed, but the striker can be adjusted slightly up or down, and in or out.

1. Loosen the screws (B).

Fig. 91: Identifying Striker And Screws With torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Wrap the striker with a shop towel, then adjust the striker by tapping it with a plastic hammer (C). Do not tap the striker too hard.
3. Lightly tighten the screws.
4. Hold the outer handle out, and push the door against the body to be sure the striker allows a flush fit. If the door latches properly, tighten the screws and recheck.

DTC TROUBLESHOOTING

DTC B1802: POWER SEAT CONTROL UNIT INTERNAL (EEPROM) ERROR

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

4. Check for DTCs with the HDS.

Is DTC B1802 indicated?

YES - Replace the power seat control unit.

NO - Intermittent failure, the system is OK at this time.

DTC B1805: POWER SEAT CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (VSP/NE MESSAGE); DTC B1808: POWER SEAT CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (A/T MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1805 and/or B1808 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power seat control unit and the gauge control module.

5. Check for DTCs with the HDS.

Are DTCs B1011, B1060, B1061, B1205, B1357, B1359, B1408, B1805, B1806, B1906, and B2160 also indicated?

YES - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Replace the power seat control unit.

DTC B1806: POWER SEAT CONTROL UNIT LOST COMMUNICATION WITH MICU (MICU MESSAGE); DTC B1810: POWER SEAT CONTROL UNIT LOST COMMUNICATION WITH MICU (MIRROR SW MESSAGE); DTC B1811: POWER SEAT CONTROL UNIT LOST COMMUNICATION WITH MICU (DOOR SW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1806, B1810, and/or B1811 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connection between the power seat control unit and the MICU.

5. Check for DTCs with the HDS.

Are DTCs B1055, B1057, B1157, B1159, B1255, B1355, B1955, B2155, B2156, and B2161 also indicated?

YES - Do the MICU input test (see **MICU INPUT TEST**).

NO - Do the power seat control unit input test (see **POWER SEAT CONTROL UNIT INPUT TEST**).

DTC B1812: POWER SEAT CONTROL UNIT LOST COMMUNICATION WITH DRIVER'S MPCS UNIT (MEM SW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1812 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power seat control unit and the driver's MPCS unit.

5. Check for DTCs with the HDS.

Are DTCs B1013, B1015, B1065, B1182, B1356, B1358, and B1905 also indicated?

YES - Do the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

NO - Do the power seat control unit input test (see **POWER SEAT CONTROL UNIT INPUT TEST**).

DTC B1825: POWER SEAT SLIDE MOTOR PULSE ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

DTC B1825 is stored when the slide switch is operated more than 1 second after the seat slides to the most forward or most backward position even when the system is OK.

1. Turn the ignition switch to LOCK (0), and then back ON (II).
2. Clear the DTCs with the HDS.
3. Operate the power seat adjustment switch in all directions for more than 1 second each.
4. Check for DTCs with the HDS.

Is DTC B1825 indicated?

YES - Go to step 5.

NO - Intermittent failure, the slide position sensor is OK at this time. Check for loose or poor connections at the power seat control unit connector.

5. Check for DTCs with the HDS.

Is DTC B1836 also indicated?

YES - Troubleshoot DTC B1836 first.

NO - Go to step 6.

6. Check for DTCs with the HDS.

Are DTCs B1826, B1827 and/or B1828 also indicated?

YES - Go to step 17.

NO - Go to step 7.

7. Turn the ignition switch to LOCK (0), and then back ON (II).
8. Operate the slide switch for 2 seconds, and check the slide motor operation.

Does the slide motor run smoothly?

YES - Go to step 9.

NO - Go to step 26.

9. Turn the ignition switch to LOCK (0).
10. Disconnect power seat control unit connector A (40P).
11. Disconnect the slide position sensor 4P connector.
12. Check for continuity between the power seat control unit connector A (40P) No. 11 and No. 29 terminals and the slide position sensor 4P connector No. 2 and No. 3 terminals respectively.

Fig. 11: Identifying Continuity Between No. 11 And No. 29 Terminals And No. 2 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between body ground and the power seat control unit connector A (40P) No. 11 terminal.

Fig. 12: Identifying Continuity Between Body Ground And Power Seat Control Unit Connector A (40P) No. 11 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 14.

14. Reconnect power seat control unit connector A (40P).
15. Turn the ignition switch ON (II).
16. Measure the voltage between the slide position sensor 4P connector No. 2 (+) and No. 3 (-) terminals.

SLIDE POSITION SENSOR 4P CONNECTOR

Wire side of female terminals

Fig. 13: Identifying Voltage Between Slide Position Sensor 4P Connector No. 2 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Faulty slide position sensor, replace the slide motor.

NO - If there is no voltage, replace the power seat control unit. If there is battery voltage, repair a short in the wire (sensor line).

17. Turn the ignition switch to LOCK (0).
18. Disconnect power seat control unit connector A (40P).
19. Disconnect the slide position sensor 4P connector.
20. Check for continuity between the power seat control unit connector A (40P) No. 15 and No. 29 terminals and the slide position sensor 4P connector No. 1 and No. 3 terminals respectively.

Fig. 14: Identifying Continuity Between No. 15 And No. 29 Terminals And No. 1 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

NO - Repair open in the wire.

21. Disconnect the 4P connector from the front up-down position sensor and the rear up-down position sensor, then disconnect the recline motor/ lumbar support motor 8P connector.
22. Check for continuity between body ground and the slide position sensor 4P connector No. 1 terminal.

SLIDE POSITION SENSOR 4P CONNECTOR

Wire side of female terminals

Fig. 15: Identifying Continuity Between Body Ground And Slide Position Sensor 4P Connector No. 1 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to Step 23.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

23. Reconnect power seat control unit connector A (40P).
24. Turn the ignition switch ON (II).
25. Measure the voltage the between power seat control unit connector A (40P) No. 15 and No. 29 terminals.

POWER SEAT CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 16: Identifying Voltage Between Power Seat Control Unit Connector A (40P) No. 15 And No. 29 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage when the slide switch is operated?

YES - Replace the slide motor/position sensor.

NO - Replace the power seat control unit.

26. Turn the ignition switch to LOCK (0).
27. Disconnect power seat control unit connector B (18P).
28. Disconnect the slide motor 2P connector.
29. Check for continuity between the power seat control unit connector B(18P) No. 7 and No. 17 terminals and the slide motor 2P connector No. 1 and No. 2 terminals respectively:

SLIDE MOTOR 2P CONNECTOR

Wire side of female terminals

POWER SEAT CONTROL UNIT CONNECTOR B (18P)

Wire side of female terminals

Fig. 17: Identifying Continuity Between No. 7 And No. 17 Terminals And No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 30.

NO - Repair open in the wire.

30. Check for continuity between body ground and the slide motor 2P connector No. 1 and No. 2 terminals individually.

SLIDE MOTOR 2P CONNECTOR

Wire side of female terminals

Fig. 18: Identifying Continuity Between Body Ground And Slide Motor 2P Connector No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 31.

31. Test the slide motor (see **SLIDE MOTOR, FRONT UP-DOWN MOTOR, REAR UP-DOWN MOTOR**).

Is the motor OK?

YES - Replace the power seat control unit.

NO - Replace the slide motor/position sensor.

DTC B1826: POWER SEAT FRONT UP-DOWN MOTOR PULSE ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

DTC B1826 is stored when the front up-down switch is operated more than 1 second after the seat moves to the most up or most down position, even when the system is OK.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

1. Turn the ignition switch to LOCK (0), and then back ON (II).
2. Clear the DTCs with the HDS.
3. Operate the power seat adjustment switch in all directions for more than 1 second each.
4. Check for the DTCs with the HDS.

Is DTC B1826 indicated?

YES - Go to step 5.

NO - Intermittent failure, the front up-down motor/ position sensor is OK at this time. Check for loose or poor connections at the power seat control unit connectors.

5. Check for DTCs with the HDS.

Is DTC B1836 also indicated?

YES - Troubleshoot DTC B1836 first.

NO - Go to step 6.

6. Check for DTCs with the HDS.

Are DTCs B1825, B1827 and/or B1828 also indicated?

YES - Go to step 17.

NO - Go to step 7.

7. Turn the ignition switch to LOCK (0), and then back ON (II).
8. Operate the front up-down switch for 2 seconds, and check the front up-down motor operation.

Does the front up-down motor run smoothly?

YES - Go to step 9.

NO - Go to step 26.

9. Turn the ignition switch to LOCK (0).
10. Disconnect power seat control unit connector A (40P).
11. Disconnect the front up-down position sensor 4P connector.
12. Check for continuity between the power seat control unit connector A (40P) No. 12 and No. 29 terminals and the front up-down position sensor 4P connector No. 2 and No. 3 terminals respectively.

YES - Repair short to ground in the wire.

NO - Go to step 31.

31. Test the front up-down motor (see **SLIDE MOTOR, FRONT UP-DOWN MOTOR, REAR UP-DOWN MOTOR**).

Is the motor OK?

YES - Replace the power seat control unit.

NO - Replace the front up-down motor/position sensor.

DTC B1827: POWER SEAT REAR UP-DOWN MOTOR PULSE ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

DTC B1827 is stored when the rear up-down switch is operated more than 1 second after the seat moves to the most up or most down position, even when the system is OK.

1. Turn the ignition switch to LOCK (0), and then back ON (II).
2. Clear the DTCs with the HDS.
3. Operate the power seat adjustment switch in all directions for more than 1 second each.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

4. Check for the DTCs with the HDS.

Is DTC B1827 indicated?

YES - Go to step 5.

NO - Intermittent failure, the rear up-down motor/ position sensor is OK at this time. Check for loose or poor connections at the power seat control unit connectors.

5. Check for DTCs with the HDS.

Is DTC B1836 also indicated?

YES - Troubleshoot DTC B1836 first.

NO - Go to step 6.

6. Check for DTCs with the HDS.

Are DTCs B1825, B1826, and/or B1828 also indicated?

YES - Go to step 17.

NO - Go to step 7.

7. Turn the ignition switch to LOCK (0), and then back ON (II).
8. Operate the rear up-down switch for 2 seconds, and check the rear up-down motor operation.

Does the rear up-down motor run smoothly?

YES - Go to step 9.

NO - Go to step 26.

9. Turn the ignition switch to LOCK (0).
10. Disconnect power seat control unit connector A (40P).
11. Disconnect the rear up-down position sensor 4P connector.
12. Check for continuity between the power seat control unit connector A (40P) No. 13 and No. 29 terminals and the rear up-down position sensor 4P connector No. 2 and No. 3 terminals respectively.

Fig. 27: Identifying Continuity Between No. 13 And No. 29 Terminals And No. 2 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between the power seat control unit connector A (40P) No. 13 terminal and body ground.

POWER SEAT CONTROL UNIT CONNECTOR A (40P)

Fig. 28: Identifying Continuity Between Power Seat Control Unit Connector A (40P) No. 13 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 14.

14. Reconnect power seat control unit connector A (40P).

15. Turn the ignition switch ON (II).
16. Measure the voltage between the rear up-down position sensor 4P connector No. 2 (+) and No. 3 (-) terminals.

REAR UP-DOWN POSITION SENSOR 4P CONNECTOR

Wire side of female terminals

Fig. 29: Identifying Voltage Between Rear Up-Down Position Sensor 4P Connector No. 2 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Faulty rear up-down position sensor, replace the rear up-down motor.

NO - If there is no voltage, replace the power seat control unit. If there is battery voltage, repair a short in the wire (sensor line).

17. Turn the ignition switch to LOCK (0).
18. Disconnect power seat control unit connector A (40P).
19. Disconnect the rear up-down position sensor 4P connector.
20. Check for continuity between the power seat control unit connector A (40P) No. 15 and No. 29 terminals and the rear up-down position sensor 4P connector No. 1 and No. 3 terminals respectively.

REAR UP-DOWN POSITION SENSOR 4P CONNECTOR

Wire side of female terminals

Fig. 30: Identifying Continuity Between No. 15 And No. 29 Terminals And No. 1 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

NO - Repair open in the wire.

21. Disconnect the 4P connector from the slide position sensor and the front up-down position sensor, then disconnect the recline motor/lumbar support motor 8P connector.
22. Check for continuity between body ground and the rear up-down position sensor 4P connector No. 1 terminal.

REAR UP-DOWN POSITION SENSOR 4P CONNECTOR

Wire side of female terminals

Fig. 31: Identifying Continuity Between Body Ground And Rear Up-Down Position Sensor 4P Connector No. 1 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 23.

23. Reconnect power seat control unit connector A (40P).
24. Turn the ignition switch ON (II).
25. Measure the voltage between the power seat control unit connector A (40P) No. 15 and No. 29 terminals.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Wire side of female terminals

Fig. 32: Identifying Voltage Between Power Seat Control Unit Connector A (40P) No. 15 And No. 29 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage when the rear up-down switch is operated?

YES - Replace the rear up-down motor/position sensor.

NO - Replace the power seat control unit.

26. Turn the ignition switch to LOCK (0).
27. Disconnect power seat control unit connector B (18P).
28. Disconnect the rear up-down motor 2P connector.
29. Check for continuity between the power seat control unit connector B (18P) No. 2 and No. 10 terminals and the rear up-down motor 2P connector No. 1 and No. 2 terminals respectively.

REAR UP-DOWN MOTOR 2P CONNECTOR

Wire side of female terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Go to step 30.

NO -Repair open in the wire.

30. Check for continuity between body ground and the rear up-down motor 2P connector No. 1 and No. 2 terminals individually.

REAR UP-DOWN MOTOR 2P CONNECTOR

Wire side of female terminals

Fig. 34: Identifying Continuity Between Body Ground And Rear Up-Down Motor 2P Connector No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 31.

31. Test the rear up-down motor (see **SLIDE MOTOR, FRONT UP-DOWN MOTOR, REAR UP-DOWN MOTOR**).

Is the motor OK?

YES - Replace the power seat control unit.

NO - Replace the rear up-down motor/position sensor.

DTC B1828: POWER SEAT RECLINE MOTOR PULSE ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

DTC B1828 is stored when the recline switch is operated more than 1 second after the seat back reclines to the most forward or most backward position, even when the system is OK.

1. Turn the ignition switch to LOCK (0), and then back ON (II).
2. Clear the DTCs with the HDS.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

3. Operate the power seat adjustment switch in all directions for more than 1 second each.
4. Check for the DTCs with the HDS.

Is DTC B1828 indicated?

YES - Go to step 5.

NO - Intermittent failure, the recline motor/position sensor is OK at this time. Check for loose or poor connections at the power seat control unit connector.

5. Check for DTCs with the HDS.

Is DTC B1836 also indicated?

YES - Troubleshoot DTC B1836 first.

NO - Go to step 6.

6. Check for DTCs with the HDS.

Are DTCs B1825, B1826, and/or B1827 also indicated?

YES - Go to step 17.

NO - Go to step 7.

7. Turn the ignition switch to LOCK (0), and then back ON (II).
8. Operate the recline switch for 2 seconds, and check the recline motor operation.

Does the recline motor run smoothly?

YES - Go to step 9.

NO - Go to step 26.

9. Turn the ignition switch to LOCK (0).
10. Disconnect power seat control unit connector A (40P).
11. Disconnect the recline motor/lumbar support motor subharness 8P connector.
12. Check for continuity between the power seat control unit connector A (40P) No. 10 and No. 29 terminals and the recline motor/lumbar support motor subharness 8P connector No. 2 and No. 3 terminals respectively.

Fig. 35: Identifying Continuity Between No. 10 And No. 29 Terminals And No. 2 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between the power seat control unit connector A (40P) No. 10 terminal and body ground.

POWER SEAT CONTROL UNIT CONNECTOR A (40P)

Fig. 36: Identifying Continuity Between Power Seat Control Unit Connector A (40P) No. 10 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 14.

14. Reconnect power seat control unit connector A (40P).
15. Turn the ignition switch ON (II).

16. Measure the voltage between the recline motor/ lumbar support motor subharness 8P connector No. 3 (+) and No. 2 (-) terminals.

**RECLINE MOTOR/LUMBAR SUPPORT MOTOR
SUBHARNES 8P CONNECTOR**

Terminal side of male terminals

Fig. 37: Identifying Voltage Between Recline Motor/ Lumbar Support Motor Subharness 8P Connector No. 3 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Check for an open/short in the wire of the recline motor/lumbar support motor subharness. If the harness is OK, replace the recline motor/ position sensor.

NO - If there is no voltage, replace the power seat control unit. If there is battery voltage, repair short in the wire (sensor line).

17. Turn the ignition switch to LOCK (0).
18. Disconnect power seat control unit connector A (40P).
19. Disconnect the recline motor/lumbar support motor subharness 8P connector.
20. Check for continuity between the power seat control unit connector A (40P) No. 15 and No. 29 terminals and the recline motor/lumbar support motor subharness 8P connector No. 2 and No. 8 terminals respectively.

**RECLINE MOTOR/LUMBAR SUPPORT MOTOR

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 23.

23. Reconnect power seat control unit connector A (40P).
24. Turn the ignition switch ON (II).
25. Measure the voltage between the power seat control unit connector A (40P) No. 15 and No. 29 terminals.

POWER SEAT CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 40: Identifying Voltage Between Power Seat Control Unit Connector A (40P) No. 15 And No. 29 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage when the recline switch is operated?

YES - Replace the recline motor/position sensor.

NO - Replace the power seat control unit.

26. Turn the ignition switch to LOCK (0).
27. Disconnect power seat control unit connector B (18P).
28. Disconnect the recline motor/lumbar support motor subharness 8P connector.
29. Check for continuity between the power seat control unit connector B (18P) No. 9 and No. 11 terminals and the recline motor/lumbar support motor subharness 8P connector No. 4 and No. 5 terminals respectively.

RECLINE MOTOR/LUMBAR SUPPORT MOTOR SUBHARNESS 8P CONNECTOR

Is there continuity?

YES - Go to step 30.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

NO - Repair open in the wire.

30. Check for continuity between body ground and the recline motor/lumbar support motor subharness 8P connector No. 4 and No. 5 terminals individually.

RECLINE MOTOR/LUMBAR SUPPORT MOTOR SUBHARNES 8P CONNECTOR

Terminal side of male terminals

Fig. 42: Identifying Continuity Between Body Ground And Recline Motor/Lumbar Support Motor Subharness 8P Connector No. 4 And No. 5 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 31.

31. Test the recline motor (see **SLIDE MOTOR, FRONT UP-DOWN MOTOR, REAR UP-DOWN MOTOR**).

Is the motor OK?

YES - Replace the power seat control unit.

NO - Replace the recline motor/position sensor.

DTC B1829: A/T P SIGNAL AND VSS SIGNAL MISMATCH

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Start the engine.
3. Test drive at 6 mph (10 km/h) for 10 seconds.
4. Check for the DTCs with the HDS.

Is DTC B1829 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections at the power seat control unit connector.

5. Check the P indicator of the A/T gear position indicator and the MIL.

Does the P indicator and MIL come on?

YES - Troubleshoot the automatic transmission system.

NO - Go to step 6.

6. Check for the gauge control module DTCs with the HDS.

Are there any DTCs indicated?

YES - Troubleshoot the gauge control module.

NO - Replace the power seat control unit.

DTC B1835: POWER TILT/TELESCOPIC STEERING SWITCH SIGNAL INPUT ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the tilt/telescopic switch in each direction for more than 3 seconds each.
4. Check for DTCs with the HDS.

Is DTC B1835 indicated?

YES - Go to step 5.

NO - Intermittent failure, the power tilt/telescopic steering system is OK at this time. Check for loose or poor connections at the tilt/telescopic switch connector and at the power tilt/telescopic control unit connector.

5. Turn the ignition switch to LOCK (0).
6. Test the power tilt/telescopic steering switch (see **POWER TILT/TELESCOPIC STEERING SWITCH TEST/REPLACEMENT**).

Is the switch OK?

YES - Go to step 7.

NO - Replace the power tilt/telescopic steering switch.

7. Disconnect power tilt/telescopic steering control unit connector A (16P).
8. Disconnect the power tilt/telescopic steering switch 13P connector.
9. Check for continuity between body ground and power tilt/telescopic steering switch 13P connector No. 1, No. 3, No. 6, No. 7, and No. 10 terminals individually.

Fig. 43: Identifying Continuity Between Body Ground And No. 1, No. 3, No. 6, No. 7, And No. 10 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 10.

10. Check for continuity between power tilt/telescopic steering control unit connector A (16P) No. 7, No. 6, No. 10, No. 14, and No. 15 terminals and the power tilt/telescopic steering switch 13P connector No. 1, No. 7, No. 3, No. 10, and No. 6 terminals respectively.

Fig. 44: Identifying Continuity Between No. 7, No. 6, No. 10, No. 14, And No. 15 Terminals And No. 1, No. 7, No. 3, No. 10, And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the power tilt/telescopic steering control unit.

NO - Repair open in the wire.

DTC B1836: POWER SEAT POSITION SENSOR CIRCUIT SHORT

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the power seat adjustment switch in all direction for more than 1 second each.
4. Check for DTCs with the HDS.

Is DTC B1836 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections at the power seat control unit connectors.

5. Turn the ignition switch to LOCK (0).

6. Disconnect power seat control unit connector A (40P).
7. Disconnect the 4P connectors from the slide position sensor, the front up-down position sensor, and the rear up-down position sensor, and disconnect the 8P connector from the recline motor/lumbar support motor subharness.
8. Check for continuity between power seat control unit connector A (40P) No. 15 terminal and body ground.

POWER SEAT CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 45: Identifying Continuity Between Power Seat Control Unit Connector A (40P) No. 15 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 9.

9. Check for continuity between body ground (motor body) and the No. 1 terminal of the slide position sensor, the front up-down position sensor, and the rear up-down position sensor.

**SLIDE POSITION SENSOR CONNECTOR (4P)
FRONT UP-DOWN POSITION SENSOR CONNECTOR (4P)
REAR UP-DOWN POSITION SENSOR CONNECTOR (4P)**

Terminal side of male terminals

Fig. 46: Identifying Continuity Between Body Ground (Motor Body) And No. 1 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the motor/position sensor that has continuity.

NO - Go to step 10.

10. Check for continuity between body ground (seat frame) and the No. 8 terminal of the recline motor/lumbar support motor subharness 8P connector.

**RECLINE MOTOR/LUMBAR SUPPORT MOTOR
8P CONNECTOR**

Wire side of female terminals

Fig. 47: Identifying Continuity Between Body Ground (Seat Frame) And No. 8 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for a short to ground in the wire of the recline motor/lumbar support motor subharness. If the harness is bad, repair it, if the harness is OK, replace the recline motor/position sensor.

NO - Replace the power seat control unit.

DTC B1837: DRIVING POSITION MEMORY RECALL TIMEOUT

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A)**.

1. Clear the DTC with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Move the steering position to the full tilt up and full telescopic out positions with the power tilt/telescopic steering switch.
4. Move both power mirrors to the full up and full left positions with the power mirror switch.
5. Move the power seat to the full front up and full rear up positions, then slide the seat all the way back and completely recline the seat-back backward with the power seat adjustment switch.
6. Put this seating position into memory with the driving position memory switch.
7. Manually move the seat away from the positions just memorized.
8. Recall the memory positions with the driving position memory switch.
9. Wait for 3 minutes.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

10. Check for DTCs with the HDS.

Are any DTCs indicated?

YES - Go to step 11.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

11. Check for DTCs with the HDS.

Are any DTCs other than B1837 indicated?

YES - Go to the indicated **DTCS TROUBLESHOOTING**.

NO - Go to step 12.

12. Clear the DTCs with the HDS, and wait for 6 seconds.

13. Move the motors shown one at a time, and check the operation time.

- Steering tilt motor up and down
- Steering telescopic motor pulled and pushed
- Power mirror actuator (up, down, left, right)
- Power seat (slide forward/backward, recline forward/backward, front up-down, rear up-down)

Does any motor fail to run smoothly?

YES - Go to the failed motor test:

- Power tilt/telescopic motor test (see **POWER TILT/TELESCOPIC STEERING MOTOR TEST**).
- Power mirror actuator test (see **POWER MIRROR SWITCH TEST/ REPLACEMENT**).
- Power seat motor test (see **DRIVER'S POWER SEAT MOTOR TEST**).

If the motor is OK, check the engagement of the motor gear.

NO - Go to the each input test:

- Power seat control unit input test (see **POWER SEAT CONTROL UNIT INPUT TEST**).
- Power tilt/telescopic steering control unit input test (see **POWER TILT/TELESCOPIC STEERING CONTROL UNIT INPUT TEST**).
- Driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

DTC B1840: TILT MOTOR PULSE ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-

CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the tilt switch in each direction for more than 1 second.
4. Check for DTCs with the HDS.

Is DTC B1840 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Clear the DTCs with the HDS.

Is DTC B1841 also indicated?

YES - Go to step 17.

NO - Go to step 6.

6. Clear the DTCs with the HDS.
7. Turn the ignition switch to LOCK (0), and then back ON (II).
8. Operate the tilt switch for 2 seconds, and check the tilt motor operation.

Does the tilt motor run smoothly?

YES - Go to step 9.

NO - Go to step 26.

9. Turn the ignition switch to LOCK (0).
10. Disconnect power tilt/telescopic control unit connector A (16P).
11. Disconnect the tilt motor/position sensor 8P connector.
12. Check for continuity between power tilt/telescopic control unit connector A (16P) No. 4, No. 12, and No. 16 terminals and tilt motor/position sensor 8P connector No. 6, No. 7, and No. 8 terminals respectively.

Fig. 48: Identifying Continuity Between No. 4, No. 12, And No. 16 Terminals And No. 6, No. 7, And No. 8 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between body ground and power tilt/telescopic control unit connector A (16P) No. 4 and No. 12 terminals individually.

Fig. 49: Identifying Continuity Between Body Ground And Power Tilt/Telescopic Control Unit Connector A (16P) No. 4 And No. 12 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 14.

14. Reconnect power tilt/telescopic control unit connector A (16P).
15. Turn the ignition switch ON (II).
16. Measure the voltage between tilt motor/position sensor 8P connector No. 6 and No. 8 terminals and between No. 7 and No. 8 terminals.

TILT MOTOR/POSITION SENSOR 8P CONNECTOR

Fig. 50: Identifying Voltage Between Tilt Motor/Position Sensor 8P Connector No. 6 And No. 8 Terminals And Between No. 7 And No. 8 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Faulty tilt motor/position sensor, replace the tilt motor assembly.

NO - If there is no voltage, replace the power tilt/ telescopic control unit. If there is battery voltage, repair short in the wire.

17. Turn the ignition switch to LOCK (0).
18. Disconnect power tilt/telescopic control unit connector A (16P).
19. Disconnect the tilt motor/position sensor 8P connector.
20. Check for continuity between power tilt/telescopic control unit connector A (16P) No. 2 and No. 16 terminals and tilt motor/position sensor 8P connector No. 5 and No. 8 terminals respectively.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Wire side of female terminals

Fig. 51: Identifying Continuity Between No. 2 And No. 16 Terminals And No. 5 And No. 8 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

NO - Repair open in the wire.

21. Disconnect the telescopic motor/position sensor 6P connector.
22. Check for continuity between tilt motor/position sensor 8P connector No. 5 terminal and body ground.

TILT MOTOR/POSITION SENSOR 8P CONNECTOR

Fig. 52: Identifying Continuity Between Tilt Motor/Position Sensor 8P Connector No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 23.

23. Reconnect power tilt/telescopic control unit connector A (16P).
24. Turn the ignition switch ON (II).
25. Measure the voltage between power tilt/telescopic control unit connector A (16P) No. 2 and No. 16 terminals.

Wire side of female terminals

Fig. 53: Identifying Voltage Between Power Tilt/Telescopic Control Unit Connector A (16P) No. 2 And No. 16 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage when the tilt switch is operated?

YES - Faulty tilt motor/position sensor, replace the tilt motor assembly.

NO - Replace the power tilt/telescopic control unit.

26. Turn the ignition switch to LOCK (0).
27. Disconnect power tilt/telescopic control unit connector B (8P).
28. Disconnect the tilt motor/position sensor 8P connector.
29. Check for continuity between power tilt/telescopic control unit connector B (8P) No. 7 and No. 8 terminals and tilt motor/position sensor 8P connector No. 2 and No. 3 terminals respectively.

Fig. 54: Identifying Continuity Between No. 7 And No. 8 Terminals And No. 2 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 30.

NO - Repair open in the wire.

30. Check for continuity between body ground and tilt motor/position sensor 8P connector No. 2 and No. 3 terminals individually.

TILT MOTOR/POSITION SENSOR 8P CONNECTOR

Fig. 55: Identifying Continuity Between Body Ground And Tilt Motor/Position Sensor 8P Connector No. 2 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 31.

31. Test the tilt motor (see **POWER TILT/TELESCOPIC STEERING MOTOR TEST**).

Is the motor OK?

YES - Replace the power tilt/telescopic control unit.

NO - Replace the tilt motor/position sensor.

DTC B1841: TELESCOPIC MOTOR PULSE ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the telescopic switch in each direction for more than 1 second.
4. Check for DTCs with the HDS.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Is DTC B1841 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Clear the DTCs with the HDS.

Is DTC B1840 also indicated?

YES - Go to step 17.

NO - Go to step 6.

6. Clear the DTCs with the HDS.
7. Turn the ignition switch to LOCK (0), and then back ON (II).
8. Operate the telescopic switch for 2 seconds, and check the telescopic motor operation.

Does the tilt motor run smoothly?

YES - Go to step 9.

NO - Go to step 26.

9. Turn the ignition switch to LOCK (0).
10. Disconnect power tilt/telescopic control unit connector A (16P).
11. Disconnect the telescopic motor/position sensor 6P connector.
12. Check for continuity between power tilt/telescopic control unit connector A (16P) No. 5, No. 13, and No. 16 terminals and telescopic motor/position sensor 6P connector No. 4, No. 5, and No. 6 terminals respectively.

TELESCOPIC MOTOR/POSITION SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 56: Identifying Continuity Between No. 5, No. 13, And No. 16 Terminals And No. 4, No. 5, And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between body ground and power tilt/telescopic control unit connector A (16P) No. 5 and No. 13 terminals individually.

Fig. 57: Identifying Continuity Between Body Ground And Power Tilt/Telescopic Control Unit Connector A (16P) No. 5 And No. 13 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 14.

14. Reconnect power tilt/telescopic control unit connector A (16P).
15. Turn the ignition switch ON (II).
16. Measure the voltage between telescopic motor/ position sensor 6P connector No. 4 and No. 6 terminals and between No. 5 and No. 6 terminals.

**TELESCOPIC MOTOR/POSITION
SENSOR 6P CONNECTOR**

Wire side of female terminals

Fig. 58: Identifying Voltage Between No. 4 And No. 6 Terminals And No. 5 And No. 6 Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Faulty telescopic motor/position sensor, replace the telescopic motor assembly.

NO - If there is no voltage, replace the power tilt/ telescopic control unit. If there is battery voltage, repair a short in the wire.

17. Turn the ignition switch to LOCK (0).
18. Disconnect power tilt/telescopic control unit connector A (16P).
19. Disconnect the telescopic motor/position sensor 6P connector.
20. Check for continuity between power tilt/telescopic control unit connector A (16P) No. 2 and No. 16 terminals and telescopic motor/position sensor 6P connector No. 3 and No. 6 terminals respectively.

**TELESCOPIC MOTOR/POSITION
SENSOR 6P CONNECTOR**

Wire side of female terminals

**POWER TILT/TELESCOPIC CONTROL
UNIT CONNECTOR A (16P)**
Wire side of female terminals

Fig. 59: Identifying Continuity Between No. 2 And No. 16 Terminals And No. 3 And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

NO - Repair open in the wire.

21. Disconnect the tilt motor/position sensor 8P connector.
22. Check for continuity between telescopic motor/ position sensor 6P connector No. 3 terminal and body ground.

**TELESCOPIC MOTOR/POSITION
SENSOR 6P CONNECTOR**

Wire side of female terminals

Fig. 60: Identifying Continuity Between Telescopic Motor/ Position Sensor 6P Connector No. 3 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 23.

23. Reconnect power tilt/telescopic control unit connector A (16P).
24. Turn the ignition switch ON (II).
25. Measure the voltage between power tilt/telescopic control unit connector A (16P) No. 2 and No. 16 terminals.

**POWER TILT/TELESCOPIC CONTROL
UNIT CONNECTOR A (16P)**

Wire side of female terminals

Fig. 61: Identifying Voltage Between Power Tilt/Telescopic Control Unit Connector A (16P) No. 2 And No. 16 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage when the telescopic switch is operated?

YES - Faulty telescopic motor/position sensor, replace the telescopic motor assembly.

NO - Replace the power tilt/telescopic control unit.

26. Turn the ignition switch to LOCK (0).
27. Disconnect power tilt/telescopic control unit connector B (8P).
28. Disconnect the telescopic motor/position sensor 6P connector.
29. Check for continuity between power tilt/telescopic control unit connector B (8P) No. 4 and No. 6 terminals and telescopic motor/position sensor 6P connector No. 1 and No. 2 terminals respectively.

Fig. 62: Identifying Continuity Between No. 4 And No. 6 Terminals And No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 30.

NO - Repair open in the wire.

30. Check for continuity between body ground and telescopic motor/position sensor 6P connector No. 1 and No. 2 terminals individually.

Fig. 63: Identifying Continuity Between Body Ground And Telescopic Motor/Position Sensor 6P Connector No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 31.

31. Test the telescopic motor (see **POWER TILT/TELESCOPIC STEERING MOTOR TEST**).

Is the motor OK?

YES - Replace the power tilt/telescopic control unit.

NO - Replace the telescopic motor/position sensor.

DTC B1842: POWER TILT/TELESCOPIC POSITION SENSOR POWER SUPPLY CIRCUIT (SVCC LINE) SHORT

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the tilt/telescopic switch in each direction for more than 1 second.
4. Check for DTCs with the HDS.

Is DTC B1842 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0).
6. Disconnect power tilt/telescopic control unit connector A (16P).
7. Disconnect the telescopic motor/position sensor 6P connector.
8. Disconnect the tilt motor/position sensor 8P connector.
9. Check for continuity between power tilt/telescopic control unit connector A (16P) No. 2 terminal and body ground.

Fig. 64: Identifying Continuity Between Power Tilt/Telescopic Control Unit Connector A (16P) No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 10.

10. At the sensor side, check for continuity between telescopic motor/position sensor 6P connector No. 3 terminal and body ground (motor body).

Fig. 65: Identifying Continuity Between Telescopic Motor/Position Sensor 6P Connector No. 3 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the telescopic motor/position sensor.

NO - Go to step 11.

11. At the sensor side, check for continuity between tilt motor/position sensor 8P connector No. 5 terminal and body ground (motor body).

TILT MOTOR/POSITION SENSOR 8P CONNECTOR

Terminal side of male terminals

Fig. 66: Identifying Continuity Between Tilt Motor/Position Sensor 8P Connector No. 5 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the tilt motor/position sensor.

NO - Replace the power tilt/telescopic control unit.

DTC B1843: POWER SEAT CONTROL UNIT LOST COMMUNICATION WITH POWER TILT/TELESCOPIC STEERING CONTROL UNIT (UART LINE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Check for DTCs with the HDS.

Is DTC B1843 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

4. Move the tilt/telescopic steering in each direction with the tilt/telescopic switch.

Does the tilt/telescopic steering move in each direction smoothly?

YES - Go to step 5.

NO - Go to step 10.

5. Turn the ignition switch to LOCK (0).
6. Disconnect power seat control unit connector A (40P).
7. Disconnect power tilt/telescopic control unit connector A (16P).
8. Check for continuity between power seat control unit connector A (40P) No. 39 terminal and power tilt/telescopic control unit connector A (16P) No. 11 terminal.

Fig. 67: Identifying Continuity Between No. 39 Terminal And No. 11 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair open in the wire.

9. Check for continuity between power seat control unit connector A (40P) No. 39 terminal and body ground.

POWER SEAT CONTROL UNIT CONNECTOR A (40P)

Wire side of female terminals

Fig. 68: Identifying Continuity Between Power Seat Control Unit Connector A (40P) No. 39 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Substitute a known-good power tilt/telescopic control unit and recheck. If DTC B1843 is still indicated, replace the power seat control unit.

10. Turn the ignition switch to LOCK (0).
11. Disconnect power tilt/telescopic control unit connectors A (16P) and B (8P).
12. Turn the ignition switch ON (II).
13. Measure the voltage between power tilt/telescopic control unit connector A (16P) No. 9 terminal and connector B (8P) No. 1 terminal, and between connector A (16P) No. 1 terminal and connector B (8P) No. 1 terminal.

POWER TILT/TELESCOPIC STEERING CONTROL UNIT CONNECTOR A (16P)

Wire side of female terminals

POWER TILT/TELESCOPIC STEERING CONTROL UNIT CONNECTOR B (8P)

Wire side of female terminals

Fig. 69: Identifying Voltage Between No. 9 Terminal And Connector B (8P) No. 1 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the power tilt/telescopic control unit.

NO - Do the power tilt/telescopic control unit input test (see **POWER TILT/TELESCOPIC STEERING CONTROL UNIT INPUT TEST**).

DTC B1844: POWER SEAT SLIDE SWITCH CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the slide switch in each direction for more than 1 second.
4. Check for DTCs with the HDS.

Is DTC B1844 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0).
6. Disconnect power seat control unit connector A (40P).
7. Disconnect the power seat adjustment switch 12P connector.
8. Check for continuity between body ground and power seat control unit connector A (40P) No. 1, No. 7, and No. 27 terminals individually.

Fig. 70: Identifying Continuity Between Body Ground And Power Seat Control Unit Connector A (40P) No. 1, No. 7, And No. 27 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 9.

9. Check for continuity between these power seat control unit connector A (40P) terminals:

- No. 1 and No. 7
- No. 1 and No. 27
- No. 7 and No. 27

Fig. 71: Identifying Continuity Between These Power Seat Control Unit Connector A (40P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 10.

10. Test the power seat adjustment switch (see **POWER SEAT ADJUSTMENT SWITCH TEST/REPLACEMENT**).

Is the switch OK?

YES - Replace the power seat control unit.

NO - Replace the power seat adjustment switch.

DTC B1845: POWER SEAT RECLINE SWITCH CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the recline switch in each direction for more than 1 second.
4. Check for DTCs with the HDS.

Is DTC B1845 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0).
6. Disconnect power seat control unit connector A (40P).
7. Disconnect the power seat adjustment switch 12P connector.
8. Check for continuity between body ground and power seat control unit connector A (40P) No. 1, No. 6, and No. 25 terminals individually.

Fig. 72: Identifying Continuity Between Body Ground And Power Seat Control Unit Connector A (40P) No. 1, No. 6, And No. 25 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 9.

9. Check for continuity between these power seat control unit connector A (40P) terminals:
 - No. 1 and No. 6
 - No. 1 and No. 25
 - No. 6 and No. 25

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Fig. 73: Identifying Continuity Between These Power Seat Control Unit Connector A (40P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 10.

10. Test the power seat adjustment switch (see **POWER SEAT ADJUSTMENT SWITCH TEST/REPLACEMENT**).

Is the switch OK?

YES - Replace the power seat control unit.

NO - Replace the power seat adjustment switch.

DTC B1846: POWER SEAT FRONT UP-DOWN SWITCH CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the front up-down switch in each direction for more than 1 second.
4. Check for DTCs with the HDS.

Is DTC B1846 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0).
6. Disconnect power seat control unit connector A (40P).
7. Disconnect the power seat adjustment switch 12P connector.
8. Check for continuity between body ground and power seat control unit connector A (40P) No. 1, No. 4, and No. 5 terminals individually.

Fig. 74: Identifying Continuity Between Body Ground And Power Seat Control Unit Connector A (40P) No. 1, No. 4, And No. 5 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 9.

9. Check for continuity between these power seat control unit connector A (40P) terminals:
 - No. 1 and No. 4
 - No. 1 and No. 5
 - No. 4 and No. 5

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Fig. 75: Identifying Continuity Between These Power Seat Control Unit Connector A (40P) Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 10.

10. Test the power seat adjustment switch (see **POWER SEAT ADJUSTMENT SWITCH TEST/REPLACEMENT**).

Is the switch OK?

YES - Replace the power seat control unit.

NO - Replace the power seat adjustment switch.

DTC B1847: POWER SEAT REAR UP-DOWN SWITCH CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate the rear up-down switch in each direction for more than 1 second.
4. Check for DTCs with the HDS.

Is DTC B1847 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0).
6. Disconnect power seat control unit connector A (40P).
7. Disconnect the power seat adjustment switch 12P connector.
8. Check for continuity between body ground and power seat control unit connector A(40P) No. 1, No. 3, and No. 23 terminals individually.

Fig. 76: Identifying Continuity Between Body Ground And Power Seat Control Unit Connector A (40P) No. 1, No. 3, And No. 23 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 9.

9. Check for continuity between these power seat control unit connector A (40P) terminals:
 - No. 1 and No. 3
 - No. 1 and No. 23
 - No. 3 and No. 23

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Fig. 77: Identifying Continuity Between These Power Seat Control Unit Connector A (40P) Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Go to step 10.

10. Test the power seat adjustment switch (see **POWER SEAT ADJUSTMENT SWITCH TEST/REPLACEMENT**).

Is the switch OK?

YES - Replace the power seat control unit.

NO - Replace the power seat adjustment switch.

DTC B2182: LEFT POWER MIRROR HORIZONTAL SENSOR SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Move the left power mirror in each direction with the power mirror switch.
4. Check for DTCs with the HDS.

Is DTC B2182 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Select POWER SEAT/POWER MIRROR from the BODY ELECTRICAL SYSTEM SELECT menu, and enter the DATA LIST.
6. Check the NORMAL/ABNORMAL information of the DRIVER DOOR MIRROR HORIZONTAL SENSOR in the DATA LIST.

Is the information indicator ABNORMAL?

YES - Go to step 7.

NO - Replace the driver's MPCS unit.

7. Turn the ignition switch to LOCK (0).
8. Disconnect driver's MPCS unit connector A (40P).
9. Disconnect the left power mirror 16P connector.
10. Check for continuity between driver's MPCS unit connector A (40P) No. 10 terminal and left power mirror 16P connector No. 4 terminal.

Fig. 78: Identifying Continuity Between Driver's MPCS Unit Connector A (40P) No. 10 Terminal And Left Power Mirror 16P Connector No. 4 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Repair open in the wire.

11. Check for continuity between left power mirror 16P connector No. 4 terminal and body ground.

LEFT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 79: Identifying Continuity Between Left Power Mirror 16P Connector No. 4 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 12.

12. Check for continuity between left power mirror 16P connector No. 4 and No. 6 terminals.

LEFT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 80: Identifying Continuity Between Left Power Mirror 16P Connector No. 4 And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires.

NO - Go to step 13.

13. Reconnect driver's MPCS unit connector A (40P).
14. Turn the ignition switch ON (II).
15. Measure the voltage between left power mirror 16P connector No. 4 terminal and body ground.

LEFT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 81: Identifying Voltage Between Left Power Mirror 16P Connector No. 4 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Replace the left power mirror.

NO - Replace the driver's MPCS unit.

DTC B2183: LEFT POWER MIRROR VERTICAL SENSOR SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Move the left power mirror in each direction with the power mirror switch.
4. Check for DTCs with the HDS.

Is DTC B2183 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Select POWER SEAT/POWER MIRROR from the BODY ELECTRICAL SYSTEM SELECT menu, and enter the DATA LIST.
6. Check the NORMAL/ABNORMAL information of the DRIVER DOOR MIRROR VERTICAL SENSOR in the DATA LIST.

Is the information indicator ABNORMAL?

YES - Go to step 7.

NO - Replace the driver's MPCS unit.

7. Turn the ignition switch to LOCK (0).
8. Disconnect driver's MPCS unit connector A (40P).
9. Disconnect the left power mirror 16P connector.
10. Check for continuity between driver's MPCS unit connector A (40P) No. 9 terminal and left power mirror 16P connector No. 3 terminal.

Fig. 82: Identifying Continuity Between Driver's MPCS Unit Connector A (40P) No. 9 Terminal And Left Power Mirror 16P Connector No. 3 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Repair open in the wire.

11. Check for continuity between left power mirror 16P connector No. 3 terminal and body ground.

Fig. 83: Identifying Continuity Between Left Power Mirror 16P Connector No. 3 Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 12.

12. Check for continuity between left power mirror 16P connector No. 3 and No. 6 terminals.

LEFT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 84: Identifying Continuity Between Left Power Mirror 16P Connector No. 3 And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires.

NO - Go to step 13.

13. Reconnect driver's MPCS unit connector A (40P).
14. Turn the ignition switch ON (II).
15. Measure the voltage between left power mirror 16P connector No. 3 terminal and body ground.

LEFT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 85: Identifying Voltage Between Left Power Mirror 16P Connector No. 3 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Replace the left power mirror.

NO - Replace the driver's MPCS unit.

DTC B2184: RIGHT POWER MIRROR HORIZONTAL SENSOR SIGNAL ERROR

NOTE: **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).**

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Move the right power mirror in each direction with the power mirror switch.
4. Check for DTCs with the HDS.

Is DTC B2184 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Select POWER SEAT/POWER MIRROR from the BODY ELECTRICAL SYSTEM SELECT menu, and enter the DATA LIST.
6. Check the NORMAL/ABNORMAL information of the ASSISTANT DOOR MIRROR HORIZONTAL SENSOR in the DATA LIST.

Is the information indicator ABNORMAL?

YES - Go to step 7.

NO - Replace the front passenger's MPCS unit.

7. Turn the ignition switch to LOCK (0).
8. Disconnect front passenger's MPCS unit connector A (28P).
9. Disconnect the right power mirror 16P connector.
10. Check for continuity between front passenger's MPCS unit connector A (28P) No. 6 terminal and right power mirror 16P connector No. 3 terminal.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Repair open in the wire.

11. Check for continuity between right power mirror 16P connector No. 3 terminal and body ground.

Fig. 87: Identifying Continuity Between Right Power Mirror 16P Connector No. 3 Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 12.

12. Check for continuity between right power mirror 16P connector No. 3 and No. 6 terminals.

RIGHT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 88: Identifying Continuity Between Right Power Mirror 16P Connector No. 3 And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires.

NO - Go to step 13.

13. Reconnect front passenger's MPCS unit connector A (28P).
14. Turn the ignition switch ON (II).
15. Measure the voltage between right power mirror 16P connector No. 3 terminal and body ground.

RIGHT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Replace the right power mirror.

NO - Replace the front passenger's MPCS unit.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Move the right power mirror in each direction with the power mirror switch.
4. Check for DTCs with the HDS.

Is DTC B2185 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Select POWER SEAT/POWER MIRROR from the BODY ELECTRICAL SYSTEM SELECT menu, and enter the DATA LIST.
6. Check the NORMAL/ABNORMAL information of the ASSISTANT DOOR MIRROR VERTICAL SENSOR in the DATA LIST.

Is the information indicator ABNORMAL?

YES - Go to step 7.

NO - Replace the front passenger's MPCS unit.

7. Turn the ignition switch to LOCK (0).
8. Disconnect front passenger's MPCS unit connector A(28P).
9. Disconnect the right power mirror 16P connector.
10. Check for continuity between front passenger's MPCS unit connector A (28P) No. 5 terminal and right power mirror 16P connector No. 4 terminal.

Fig. 90: Identifying Continuity Between Front Passenger'S MPCS Unit Connector A (28P) No. 5 Terminal And Right Power Mirror 16P Connector No. 4 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Repair open in the wire.

11. Check for continuity between right power mirror 16P connector No. 4 terminal and body ground.

RIGHT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 91: Identifying Continuity Between Right Power Mirror 16P Connector No. 4 Terminal And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Go to step 12.

12. Check for continuity between right power mirror 16P connector No. 4 and No. 6 terminals.

RIGHT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 92: Identifying Continuity Between Right Power Mirror 16P Connector No. 4 And No. 6 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires.

NO - Go to step 13.

13. Reconnect front passenger's MPCS unit connector A(28P).
14. Turn the ignition switch ON (II).
15. Measure the voltage between right power mirror 16P connector No. 4 terminal and body ground.

RIGHT POWER MIRROR 16P CONNECTOR

Terminal side of male terminals

Fig. 93: Identifying Voltage Between Right Power Mirror 16P Connector No. 4 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Replace the right power mirror.

NO - Replace the front passenger's MPCS unit.

SYSTEM INPUT TEST AND FUNCTION TEST

1. Connect the HDS to the DLC.
2. Turn the ignition switch ON (II).
3. From the BODY ELECTRICAL SYSTEM SELECTION menu, select POWER SEAT/POWER MIRROR, then DTCs.
 - If DTCs are found, troubleshoot the DTCs using B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).
 - If no DTCs are found, go to step 4.
4. Exit the DTC mode, and select DATA LIST from the POWER SEAT/POWER MIRROR TEST MODE MENU.
5. Test each input and monitor each output under the condition shown below:

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

- If the data list indication is correct, continue to the next switch. If all switches are OK, go to step 6.
- If the data list indication is not correct, do the appropriate test at the control unit and terminal indicated in the table.
 - Voltage drop tests should be done with the ignition switch ON (II) and all connectors connected and the meter negative test lead attached to a good body ground, unless specified otherwise.
 - Continuity tests should be done with the ignition switch in LOCK (0) and indicated terminals disconnected.

DATA LIST

Data List Input/Command	Condition: Data List Indication	Control Unit/Terminal Number/ Test (If applicable)	Possible cause if desired result is not obtained
Door Mirror UP switch	Mirror select switch in LEFT, then RIGHT Mirror up switch pressed: ON Mirror up switch released: OFF	MICU/P9 (WHT) Mirror select switch UP: 0 V Center or DOWN: 5 V	• Faulty switch (see <u>POWER MIRROR SWITCH TEST/REPLACEMENT</u>) • An open in the wire • A short in the wire • Faulty control unit
Door Mirror Select in LEFT selection	Mirror select switch in LEFT position: ON Select switch in CENTER or RIGHT position: OFF	MICU/P11 (PUR) Mirror select switch LEFT: 0 V Center or RIGHT: 5 V	• Faulty switch (see <u>POWER MIRROR SWITCH TEST/REPLACEMENT</u>) • An open in the wire • A short in the wire • Faulty control unit

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

6. Exit the DATA LIST and select FUNCTION TEST.
7. Do each of the function tests listed in the table shown. The appropriate output should occur.
 - If the function operates normally, go to the next function test. If all function tests operate normally, the system is OK.
 - If the function does not occur, do the appropriate test at the control unit and terminal indicated in the table.
 - Voltage drop tests should be done with the ignition switch ON (II) and all connectors connected.
 - Continuity tests should be done with the ignition switch LOCK (0) and indicated terminals disconnected.
 - Jumper tests should be done according to the instructions indicated.
 - If the test indicates that the component operates normally, but the function will not operate by doing the function test or the normal use of the component, the control unit that operates that function must be faulty; replace it.
 - If the test indicates that the component does not operate normally, check for an open or short in the harnesses between the component and the control unit. If the harness is OK, replace the component.

COMPONENT AND OPERATION CHART

Function Test	Component and Operation	Control Unit/Terminal Number/Test (If applicable)	Possible cause if desired result is not obtained
Power Seat: Slide Motor-Full Forward	Seat slides forward	Power seat control unit/B8 (ORN), A9 (BLK), B7 (GRY), B17(BLU) Disconnect the power seat control unit connectors A and B. Connect B8 to B17 and B7 to A9; driver's seat should slide forward.	• Faulty motor • An open in the wire • A short in the wire
Power Seat: Slide Motor-Full Backward	Seat slides backward	Power seat control unit/B8 (ORN), A9 (BLK), B7 (GRY), B17(BLU) Disconnect the power seat control unit connectors A and B. Connect B8 to B7 and B17 to A9; driver's seat should slide backward.	• Faulty motor • An open in the wire • A short in the wire
Power Seat: Front UP-DOWN Motor-Full Up	Front of seat moves up	Power seat control unit/B8 (ORN), A9 (BLK), B6 (BRN), B16(PUR) Disconnect the power seat control unit connectors A and B. Connect B8 to B16 and B6 to A9; front of driver's seat should move up.	• Faulty motor • An open in the wire • A short in the wire
Power Seat: Front UP-DOWN Motor-Full Down	Front of seat moves down	Power seat control unit/B8 (ORN), A9 (BLK), B6 (BRN), B16(PUR) Disconnect the power seat control unit connectors A and B. Connect B8 to B6 and B16 to A9; front of driver's seat	• Faulty motor • An open in the wire • A short in

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

		should move down.	the wire
Power Seat: Rear Up-Down Motor-Full Up	Rear of seat moves up	Power seat control unit/B1 (LT BLU), A9 (BLK), B2 (GRN), B10 (PNK) Disconnect the power seat control unit connectors A and B. Connect B1 to B2 and B10 to A9; rear of driver's seat should move up.	- Faulty motor - An open in the wire - A short in the wire
Power Seat: Rear Up-Down Motor-Full Down	Rear of seat moves down	Power seat control unit/B1 (LT BLU), A9 (BLK), B2 (GRN), B10(PNK) Disconnect the power seat control unit connectors A and B. Connect B1 to B10 and B2 to A9; rear of driver's seat should move down.	- Faulty motor - An open in the wire - A short in the wire
Power Seat: Recline Motor-Full Forward	Seat back moves forward	Power seat control unit/B1 (LT BLU), A9 (BLK), B9 (YEL), B11 (LTGRN) Disconnect power seat control unit connectors A and B. Connect B1 to B11 and B9 to A9; driver's seat back should move forward.	- Faulty motor - An open in the wire - A short in the wire
Power Seat: Recline Motor-Full Backward	Seat back moves backward	Power seat control unit/B1 (LT BLU), A9 (BLK), B9 (YEL), B11 (LTGRN) Disconnect power seat control unit connectors A and B. Connect B1 to B9 and B11 to A9; driver's seat back should move backward.	- Faulty motor - An open in the wire - A short in the wire
Column Tilt Up	Power tilt/telescopic steering tilts up	Power tilt/telescopic steering control unit/B1 (BLK), B3 (WHT), B7 (ORN), B8 (LT BLU) Disconnect tilt/telescopic steering control unit connectors A and B. Connect B3 to B7 and B1 to B8; steering tilts up.	- Faulty motor - An open in the wire - A short in the wire
Column Tilt Down	Power tilt/telescopic steering tilts down	Power tilt/telescopic steering control unit/B1 (BLK), B3 (WHT), B7 (ORN), B8 (LT BLU) Disconnect tilt/telescopic steering control unit connectors A and B. Connect B3 to B8 and B1 to B7; steering tilts down.	- Faulty motor - An open in the wire - A short in the wire
Column Telescopic Extend	Power tilt/telescopic steering telescopic extend	Power tilt/telescopic steering control unit/B1 (BLK), B3 (WHT), B6 (PNK), B4 (LT GRN) Disconnect tilt/telescopic steering control unit connectors A and B. Connect B3 to B4 and B1 to B6; steering telescopic extend.	- Faulty motor - An open in the wire - A short in the wire

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Column Telescopic Retract	Power tilt/telescopic steering telescopic retract	Power tilt/telescopic steering control unit/B1 (BLK), B3 (WHT), B6 (PNK), B4 (LT GRN) Disconnect tilt/telescopic steering control unit connectors A and B. Connect B3 to B6 and B1 to B4; steering telescopic retract.	• Faulty motor • An open in the wire • A short in the wire
---------------------------------	--	--	--

POWER SEAT CONTROL UNIT INPUT TEST

NOTE: Before testing the power seat control unit, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Turn the ignition switch to LOCK (0).
2. Remove the driver's seat (see FRONT SEAT REMOVAL/INSTALLATION).

NOTE: Be careful not to scratch the interior trim.

3. Disconnect the 40P connector (A) and 18P connector (B) from the power seat control unit(C).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Fig. 94: Identifying 40P Connector, 18P Connector And Power Seat Control Unit
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, make the input test at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

WIRE CAVITY CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A37	BLU	Under all conditions	Measure the voltage to ground: There should be	• Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Blown No. 4 (40 A) fuse in the main

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

		battery voltage.	under-hood fuse box
			An open in the wire

6. Reconnect the connectors to the power seat control unit, and make these input tests at the connectors.
- If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, the control unit must be faulty; replace it.

WIRE CAVITY CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A9	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	- Poor ground(G602) - An open in the wire
B4	BLK			
B18	BLK			
A35	YEL	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	- Blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box - An open in the wire
B1	LT BLU	Under all conditions	Measure the voltage to ground: There should be battery voltage.	- Blown No. 2 (OP2) (40 A) fuse in the main under-hood fuse box - Blown No. 16 (20 A) fuse in the under-dash fuse/relay box - An open in the wire
B8	ORN	Under all conditions	Measure the voltage to ground: There should be battery voltage.	- Blown No. 2 (OP2) (40 A) fuse in the main under-hood fuse box - Blown No. 14 (20 A) fuse in the under-dash fuse/relay box - An open in the wire
A31	GRN	Shift lever in P position	Measure the voltage to ground: There should be less than 1 V.	- Faulty transmission range switch - An open in the wire
		Shift lever out of P position	Measure the voltage to ground: There should be about 10 V.	A short to ground in the wire

POWER MIRROR CIRCUIT INPUT TEST

NOTE: Before testing the power mirror circuit unit, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

MICU

1. Turn the ignition switch to LOCK (0).
2. Remove the left side kick panel (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**).
3. Disconnect under-dash fuse/relay box connector P (30P).

Fig. 95: Identifying Under-Dash Fuse/Relay Box Connector P (30P)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, go to step 5.
5. Reconnect the connector to the under-dash fuse/relay box.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

WIRE CAVITY CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
P9	WHT	Power mirror switch in UP	Measure the voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty power mirror switch • An open in the wire
		Power mirror switch released	Measure the voltage to ground: There should be 5 V or more.	• Faulty power mirror switch • A short to ground in the wire
P10	PNK	Power mirror switch in DOWN	Measure the voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty power mirror switch • An open in the wire
		Power mirror switch released	Measure the voltage to ground: There should be 5 V	• Faulty power mirror switch

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

			or more.	• A short to ground in the wire
P25	GRN	Power mirror switch in LEFT	Measure the voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty power mirror switch • An open in the wire
		Power mirror switch released	Measure the voltage to ground: There should be 5 V or more.	• Faulty power mirror switch • A short to ground in the wire
P26	BLU	Power mirror switch in RIGHT	Measure the voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty power mirror switch • An open in the wire
		Power mirror switch released	Measure the voltage to ground: There should be 5 V or more.	• Faulty power mirror switch • A short to ground in the wire
P11	PUR	Power mirror switch in L position	Measure the voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty power mirror switch • An open in the wire
		Power mirror switch released	Measure the voltage to ground: There should be 5 V or more.	• Faulty power mirror switch • A short to ground in the wire
P22	GRY	Power mirror switch in R position	Measure the voltage to ground: There should be less than 1 V.	• Poor ground (G501) • Faulty power mirror switch • An open in the wire
		Power mirror switch released	Measure the voltage to ground: There should be 5 V or more.	• Faulty power mirror switch • A short to ground in the wire

Driver's MPCS Unit

6. Remove the driver's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
7. Disconnect driver's MPCS unit connector A (40P).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Fig. 96: Identifying Driver'S MPCS Unit Connector A (40P)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 9.
9. With the connector still disconnected, make these input tests at the connector.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 10.

WIRE CAVITY CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A5 ⁽¹⁾	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G601) • Faulty power mirror switch • An open in the wire
A7 ⁽¹⁾	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • An open in the wire
A8	GRY	Under all conditions	Check for continuity between the A8 terminal and front passenger's MPCS unit connector A (28P) No. 4 terminal: There should be continuity.	• Faulty under-dash fuse/relay box • An open in the wire
A16	YEL	Under all conditions	Connect the A7 and A16 terminals, and A5 and A38 terminals: The left power mirror moves UP.	• Faulty left power mirror actuator • An open in the wire
A38	PNK			

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

A17	RED	Under all conditions	Connect the A7 and A17 terminals, and A5 and A38 terminals: The left power mirror swings LEFT.	- Faulty left power mirror actuator - An open in the wire
A38	PNK			
(1) Reconnect the connector to the driver's MPCS unit.				

Front Passenger's MPCS Unit

- Remove the front passenger's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
- Disconnect the front passenger's MPCS unit connector A (28P).

Fig. 97: Identifying Front Passenger'S MPCS Unit Connector A (28P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 13.
- With the connector still disconnected, make these input tests at the connector.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 14.

WIRE CAVITY CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A7 ⁽¹⁾	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	- Poor ground (G506) - Faulty power mirror switch - An open in the wire
		Under all	Measure the voltage to ground:	Blown No. 4 (40 A) fuse in the main under-hood fuse box

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

A2 ⁽¹⁾	WHT	conditions	There should be battery voltage.	• Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • An open in the wire
A4	GRY	Under all conditions	Check for continuity between the A4 terminal and driver's MPCs unit connector A (40P) No. 8 terminal: There should be continuity.	• Faulty under-dash fuse/relay box • An open in the wire
A10	LTGRN	Under all conditions	Connect the A2 and A10 terminals, and A7 and A25 terminals: The right power mirror moves UP.	• Faulty right power mirror actuator • An open in the wire
A25	BLU			
A11	LT BLU	Under all conditions	Connect the A2 and A11 terminals, and A7 and A25 terminals: The left power mirror swings RIGHT.	• Faulty right power mirror actuator • An open in the wire
A25	BLU			
(1) Reconnect the connector to the front passenger's MPCs unit.				

14. If multiple failures are found on the more than one control unit, replace the under-dash fuse/relay box (includes the MICU). If input failures are related to a particular control unit, replace the control unit.

POWER TILT/TELESCOPIC STEERING CONTROL UNIT INPUT TEST

NOTE: Before testing the power till/telescopic steering control unit, troubleshoot the multiplex integrated control unit first, using **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Turn the ignition switch to LOCK (0).
2. Remove the steering column cover (see **COLUMN COVER REMOVAL/INSTALLATION**).
3. Disconnected the 16P connector (A) and 8P connector (B) from the power till/telescopic steering control unit (C).

Fig. 98: Identifying 16P Connector, 8P Connector And Power Tilt/Telescopic Steering Control Unit
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 5.
5. Reconnect the connectors to the power tilt/telescopic steering control unit, and make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, the control unit must be faulty; replace it.

WIRE CAVITY CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not
--------	------	----------------	----------------------	---

2008 Acura MDX**2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX**

				obtained
A8	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G503, G506) • An open in the wire
B1				
A1	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • An open in the wire
A9	YEL	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. 21 (7.5 A) fuse in the under-dash fuse/relay box • An open in the wire
B3	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 2 (OP2) (40 A) fuse in the main under-hood fuse box • Blown No. 28 (20 A) fuse in the under-dash fuse/relay box • An open in the wire
B5	GRN	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 3 (P/W) (50 A) fuse in the main under-hood fuse box • Blown No. 15 (20 A) fuse in the under-dash fuse/relay box • An open in the wire

DRIVING POSITION MEMORY SWITCH TEST/REPLACEMENT

1. Remove the driver's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the driving position memory switch (B).

Fig. 99: Identifying 10P Connector And Driving Position Memory Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the two screws, then remove the switch from the door panel.
4. Check for continuity between the terminals in each switch position according to the table.

Terminal		8		1	2	4	5	6	7
Position									
MEMO BUTTON	OFF								
	ON					○ — ○			
POSITION 1 BUTTON	OFF								
	ON							○ — ○	
POSITION 2 BUTTON	OFF								
	ON						○ — ○		
INDICATOR 1		○ — ⊗ — ○							
INDICATOR 2		○ — ⊗ — ○							

Fig. 100: Checking For Continuity Between Terminals In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the continuity is not as specified, replace the switch.

POWER SEAT ADJUSTMENT SWITCH TEST/REPLACEMENT

1. Remove the power seat adjustment switch knobs (A) and recline cover from the driver's power seat (see **FRONT SEAT DISASSEMBLY/REASSEMBLY**), then remove the two screws and the power seat adjustment switch (B).

Fig. 101: Identifying Power Seat Adjustment Switch Knobs And Power Seat Adjustment Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the 12P connector from the power seat adjustment switch.
3. Reinstall the adjustment switch knobs to the switch.
4. Check for continuity between the terminals in each switch position according to the table.

Terminal		1	2	3	5	6	7	8	9	11	12
Position	SLIDE SWITCH										
	FORWARD							○	—	○	
	BACKWARD						○	—	○		
RECLINE SWITCH	FORWARD		○	—	—	—	—	—	—	—	○
	BACKWARD		○	—	—	○					
FRONT UP-DOWN SWITCH	UP			○	—	—	—	○			
	DOWN							○	—	○	
REAR UP-DOWN SWITCH	UP	○	—	○							
	DOWN		○	—	○						

Fig. 102: Checking For Continuity Between Terminals In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the continuity is not as specified, replace the switch.

DRIVER'S POWER SEAT MOTOR TEST

SLIDE MOTOR, FRONT UP-DOWN MOTOR, REAR UP-DOWN MOTOR

1. Remove the driver's seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Disconnect the 2P connector from each power seat motor.

NOTE: All connectors are terminal side of male terminals.

Fig. 103: Identifying 2P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test each motor by connecting power and ground according to the table. When the motor stops running, disconnect battery power immediately.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Driver Position Memory System (DPMS) - MDX

Terminal		1	2
Position			
SLIDE MOTOR	FORWARD	⊖	⊕
	BACKWARD	⊕	⊖

Terminal		1	2
Position			
FRONT UP-DOWN MOTOR	UP	⊖	⊕
	DOWN	⊕	⊖

Terminal		1	2
Position			
REAR UP-DOWN MOTOR	UP	⊖	⊕
	DOWN	⊕	⊖

Fig. 104: Terminal Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the motor does not run or fails to run smoothly, replace the seat linkage assembly (see **FRONT SEAT LINKAGE DISASSEMBLY/REASSEMBLY**).

NOTE: The slide and up-down motors are not available separately because of the part of seat linkage, refer to the seat linkage disassembly/ reassembly (see **FRONT SEAT LINKAGE DISASSEMBLY/REASSEMBLY**).

RECLINE MOTOR

1. Remove the driver's seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Disconnect the power seat wire harness 8P connector from the recline motor/lumbar support motor subharness.

Fig. 105: Identifying Power Seat Wire Harness 8P Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Test motor by connecting power and ground according to the table. When the motor stops running, disconnect battery power immediately.

Terminal		4	5
Position	RECLINE MOTOR	⊕	⊖
	BACKWARD	⊖	⊕

Fig. 106: Terminal Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

- If the motor does not run or fails to run smoothly, check for an open in the wire between the 8P connector and recline motor. If the harness is OK, replace the recline motor (see **FRONT SEAT RECLINE MOTOR REPLACEMENT**).

POWER TILT/TELESCOPIC STEERING SWITCH TEST/REPLACEMENT

- Remove the steering column covers (see **COLUMN COVER REMOVAL/INSTALLATION**).
- Disconnect the 13P connector (A) from the power tilt/telescopic steering switch (B).

Fig. 107: Identifying 13P Connector And Power Tilt/Telescopic Steering Switch
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to the table.

Terminal Position	1	3	6	7	10
TILT UP	○	○	○	○	
TILT DOWN	○	○	○	○	
TELESCOPIC PUSH		○	○	○	○
TELESCOPIC PULL		○	○	○	○

2007-09 ENGINE PERFORMANCE

EGR System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying EGR System Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC TROUBLESHOOTING

DTC P0401: EGR INSUFFICIENT FLOW

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Do the EGR TEST in the INSPECTION MENU with the HDS.

Is the result OK?

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EGR System - MDX

YES - Go to step 5.

NO - Go to step 7.

5. Test-drive under these conditions:

- Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
- Transmission in D position
- Vehicle speed at 25 mph (40 km/h) or more, and engine speed between 1,100 rpm and 3,000 rpm
- During the drive, decelerate (with the throttle fully closed) for 5 seconds

6. Monitor the OBD STATUS for DTC P0401 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Remove the engine cover, clean the intake manifold, and EGR ports with throttle plate and induction cleaner, then go to step 9.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 5 and recheck.

7. Turn the ignition switch OFF.

8. Replace the EGR valve (see **EGR VALVE REPLACEMENT**).

9. Turn the ignition switch ON (II).

10. Reset the PCM with the HDS.

11. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).

12. Test-drive under these conditions:

- Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
- Transmission in D position
- Vehicle speed at 25 mph (40 km/h) or more, and engine speed between 1,100 rpm and 3,000 rpm
- During the drive, decelerate (with the throttle fully closed) for 5 seconds

13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0401 indicated?

YES - Check for poor connections or loose terminals at the EGR valve and the PCM, then go to step 15.

NO - Go to step 14.

14. Monitor the OBD STATUS for DTC P0401 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 13, go

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EGR System - MDX

to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EGR valve and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 12.

15. Reconnect all connectors, then update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
16. Test-drive under these conditions:
 - Engine coolant temperature (ECT SENSOR 1) above 158°F (70°C)
 - Transmission in D position
 - Vehicle speed at 25 mph (40 km/h) or more, and engine speed between 1,100 rpm and 3,000 rpm
 - During the drive, decelerate (with the throttle fully closed) for 5 seconds
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0401 indicated?

YES - Check for poor connections or loose terminals at the EGR valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 16. If the PCM was substituted, go to step 1.

NO - Go to step 18.

18. Monitor the OBD STATUS for DTC P0401 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 17, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EGR valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 16. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 16.

DTC P0404: EGR CONTROL CIRCUIT RANGE/ PERFORMANCE PROBLEM

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.

3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Do the EGR TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Clean any carbon build-up on the EGR valve with throttle plate and induction cleaner.

NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Disconnect the EGR valve 6P connector.
7. At the sensor side, measure resistance between EGR valve 6P connector terminals No. 1 and No. 2.

EGR VALVE 6P CONNECTOR

Terminal side of male terminals

Fig. 2: Identifying Resistance Between EGR Valve 6P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 100 kohms, or more?

YES - Go to step 25.

NO - Go to step 8.

8. Measure resistance between EGR valve 6P connector terminals No. 1 and No. 3.

EGR VALVE 6P CONNECTOR

Terminal side of male terminals

Fig. 3: Identifying Resistance Between EGR Valve 6P Connector Terminals No. 1 And No. 3
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 100 kohms, or more?

YES - Go to step 25.

NO - Go to step 9.

9. Check for continuity between EGR valve 6P connector terminal No. 6 and body ground.

EGR VALVE 6P CONNECTOR

Wire side of female terminals

Fig. 4: Identifying Continuity Between EGR Valve 6P Connector Terminal No. 6 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire between the EGR valve and G101, then go to step 26.

10. Jump the SCS line with the HDS.
11. Disconnect PCM connector C (49P).
12. Check for continuity between PCM connector terminal C10 and body ground.

Fig. 5: Checking Continuity Between PCM Connector Terminal C10 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -Repair short in the wire between the PCM (C10) and the EGR valve, then go to step 26.

NO - Go to step 13.

13. Check for continuity between PCM connector terminal C10 and EGR valve 6P connector terminal No. 4.

Fig. 6: Identifying Continuity Between PCM Connector Terminal C10 And EGR Valve 6P Connector Terminal No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 14.

NO - Repair open in the wire between the PCM (C10) and the EGR valve, then go to step 26.

14. Remove the EGR valve (see **EGR VALVE REPLACEMENT**).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EGR System - MDX

15. Clean the intake manifold EGR port and the passage inside the EGR valve with throttle plate and induction cleaner.
16. Install the EGR valve (see **EGR VALVE REPLACEMENT**).
17. Reconnect the EGR valve 6P connector.
18. Reconnect PCM connector C (49P).
19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
22. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
23. Do the EGR TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Go to step 32.

NO - Go to step 24.

24. Turn the ignition switch OFF.
25. Replace the EGR valve (see **EGR VALVE REPLACEMENT**).
26. Reconnect all connectors.
27. Turn the ignition switch ON (II).
28. Reset the PCM with the HDS.
29. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
30. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
31. Do the EGR TEST in the INSPECTION MENU with the HDS.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0404 indicated?

YES -Check for poor connections or loose terminals at the EGR valve and the PCM. If the connector and terminal fits are OK, go to step 34.

NO -Go to step 33.

33. Monitor the OBD STATUS for DTC P0404 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 32, go to the indicated **DTCs troubleshooting**.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EGR System - MDX

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EGR valve and the PCM, then go to step 1. If the screen indicates EXECUTING, keep driving until a result comes on. If the screen indicates OUT OF CONDITION, go to step 30.

34. Reconnect all connectors, then update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
35. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
36. Do the EGR TEST in the INSPECTION MENU with the HDS.
37. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0404 indicated?

YES - Check for poor connections or loose terminals at the EGR valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 35. If the PCM was substituted, go to step 1.

NO - Go to step 38.

38. Monitor the OBD STATUS for DTC P0404 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 37, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EGR valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 35. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 35.

DTC P0406: EGR VALVE POSITION SENSOR CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check the EGR VLS in the DATA LIST with the HDS.

Is 4.88 V or more indicated?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EGR valve and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the EGR valve 6P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between EGR valve 6P connector terminals No. 2 and No. 3.

EGR VALVE 6P CONNECTOR

Wire side of female terminals

Fig. 7: Identifying Voltage Between EGR Valve 6P Connector Terminals No. 2 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 11.

NO - Go to step 7.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector C (49P).
10. Check for continuity between PCM connector terminal C16 and EGR valve 6P connector terminal No. 2.

Fig. 8: Identifying Continuity Between PCM Connector Terminal C16 And EGR Valve 6P Connector Terminal No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 18.

NO - Repair open in the wire between the EGR valve and the PCM (C16), then go to step 13.

11. Turn the ignition switch OFF.
12. Replace the EGR valve (see **EGR VALVE REPLACEMENT**).
13. Reconnect all connectors.
14. Turn the ignition switch ON (II).
15. Reset the PCM with the HDS.
16. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0406 indicated?

YES - Check for poor connections or loose terminals at the EGR valve and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

18. Reconnect all connectors.
19. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
20. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0406 indicated?

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EGR System - MDX

YES - Check for poor connections or loose terminals at the EGR valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

DTC P2413: EGR SYSTEM MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Do the EGR TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EGR valve and the PCM.

NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Turn the ignition switch ON (II).
7. Check the EGR VLS in the DATA LIST with the HDS.

Is about 0 V indicated?

YES - Go to step 8.

NO - Go to step 21.

8. Turn the ignition switch OFF.
9. Disconnect the EGR valve 6P connector.
10. Turn the ignition switch ON (II).
11. Measure voltage between EGR valve 6P connector terminal No. 3 and body ground.

EGR VALVE 6P CONNECTOR

Wire side of female terminals

Fig. 9: Identifying Voltage Between EGR Valve 6P Connector Terminal No. 3 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 16.

NO - Go to step 12.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect PCM connector C (49P).
15. Check for continuity between PCM connector terminal C12 and EGR valve 6P connector terminal No. 3.

Fig. 10: Identifying Continuity Between PCM Connector Terminal C12 And EGR Valve 6P Connector Terminal No. 3
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 52.

NO - Repair open in the wire between the EGR valve and the PCM (C12), then go to step 44.

16. Turn the ignition switch OFF.
17. Jump the SCS line with the HDS.
18. Disconnect PCM connector C (49P).
19. Check for continuity between PCM connector terminal C34 and body ground.

Fig. 11: Identifying Continuity Between PCM Connector Terminal C34 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C34) and the EGR valve, then go to step 44.

NO - Go to step 20.

20. Check for continuity between PCM connector terminal C34 and EGR valve 6P connector terminal No. 1.

Fig. 12: Identifying Continuity Between PCM Connector Terminal C34 And EGR Valve 6P Connector Terminal No. 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

NO - Repair open in the wire between the PCM (C34) and the EGR valve, then go to step 44.

21. Turn the ignition switch OFF.
22. If not already done, disconnect the EGR valve 6P connector.
23. At the EGR valve side, measure resistance between EGR valve 6P connector terminals No. 1 and No. 2.

EGR VALVE 6P CONNECTOR

Terminal side of male terminals

Fig. 13: Identifying Resistance Between EGR Valve 6P Connector Terminals No. 1 And No. 2
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there resistance of 100 kohms or more?

YES - Go to step 43.

NO - Go to step 24.

24. At the EGR valve side, measure resistance between EGR valve 6P connector terminals No. 1 and No. 3.

EGR VALVE 6P CONNECTOR

Terminal side of male terminals

Fig. 14: Identifying Resistance Between EGR Valve 6P Connector Terminals No. 1 And No. 3
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there resistance of 100 kohms or more?

YES - Go to step 43.

NO - Go to step 25.

25. If not already done, jump the SCS line with the HDS.
26. If not already done, disconnect PCM connector C (49P).
27. Check for continuity between PCM connector terminal C10 and body ground.

Fig. 15: Identifying Continuity Between PCM Connector Terminal C10 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C10) and the EGR valve, then go to step 44.

NO - Go to step 28.

28. Check for continuity between PCM connector terminal C10 and EGR valve 6P connector terminal No. 4.

Fig. 16: Identifying Continuity Between PCM Connector Terminal C10 And EGR Valve 6P Connector Terminal No. 4

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 29.

NO - Repair open in the wire between the PCM (C10) and the EGR valve, then go to step 44.

29. Check for continuity between EGR valve 6P connector terminal No. 6 and body ground.

EGR VALVE 6P CONNECTOR

Wire side of female terminals

Fig. 17: Identifying Continuity Between EGR Valve 6P Connector Terminal No. 6 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 30.

NO - Repair open in the wire between the EGR valve and G101 (see **GROUND TO COMPONENTS INDEX**), then go to step 44.

30. Reconnect PCM connector C (49P).
31. At the EGR valve side, connect the battery positive terminal to EGR valve 6P connector terminal No. 4 with a jumper wire.

EGR VALVE 6P CONNECTOR

Terminal side of male terminals

Fig. 18: Identifying Battery Positive Terminal To EGR Valve 6P Connector Terminal No. 4 With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. Start the engine and let it idle, then connect the battery negative terminal to EGR valve 6P connector terminal No. 6 with a jumper wire.

Does the engine stall or run rough?

YES - Go to step 51.

NO - Go to step 33.

33. Turn the ignition switch OFF.
34. Remove the EGR valve (see **EGR VALVE REPLACEMENT**).
35. Clean the intake manifold EGR port at the passage inside the EGR valve with throttle plate and induction cleaner.
36. Install the EGR valve (see **EGR VALVE REPLACEMENT**).
37. Reconnect all connectors.
38. Turn the ignition switch ON (II).
39. Reset the PCM with the HDS.
40. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
41. Do the EGR TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Go to step 49.

NO - Go to step 42.

42. Turn the ignition switch OFF.
43. Replace the EGR valve (see **EGR VALVE REPLACEMENT**).
44. Reconnect all connectors.
45. Turn the ignition switch ON (II).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EGR System - MDX

46. Reset the PCM with the HDS.
47. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
48. Do the EGR TEST in the INSPECTION MENU with the HDS.
49. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2413 indicated?

YES - Check for poor connections or loose terminals at the EGR valve and the PCM, then go to step 1.

NO - Go to step 50.

50. Monitor the OBD STATUS for DTC P2413 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 49, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EGR valve and the PCM, then go to step 1. If the screen indicates EXECUTING or OUT OF CONDITION, keep idling until a result comes on.

51. Turn the ignition switch OFF.
52. Reconnect all connectors.
53. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
54. Do the EGR TEST in the INSPECTION MENU with the HDS.
55. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2413 indicated?

YES - Check for poor connections or loose terminals at the EGR valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 56.

56. Monitor the OBD STATUS for DTC P2413 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 55, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates **FAILED**, check for poor connections or loose terminals at the EGR valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 54. If the PCM was substituted, go to step 1. If the screen indicates **EXECUTING** or **OUT OF CONDITION**, go to step 54 and recheck.

EGR VALVE REPLACEMENT

1. Remove the engine cover (see step 1 on **INTAKE MANIFOLD REMOVAL AND INSTALLATION**).
2. Remove the main under-hood fuse box.
3. Disconnect the EGR valve connector (A).

Fig. 19: Identifying EGR Valve Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the EGR valve (B).
5. Install the parts in the reverse order of removal with a new gasket (C).

Windshield Washer Motor	Behind right side of front bumper, on washer reservoir. See Fig. 21 .
Windshield Wiper Motor	Under left side of cowl cover. See Fig. 139 .

SENDING UNITS & SENSORS**SENDING UNITS & SENSORS LOCATION**

Component	Location
A/C Pressure Sensor	Right side of engine compartment. See Fig. 114 .
APP Sensor	Under left side of dash. See Fig. 140 .
ATF Temperature Sensor	On transaxle end cover. See Fig. 137 .
Automatic Lighting Sensor/Sunlight Sensor	Under top center of dash. See Fig. 37 .
Back-Up Sensors (4)	In rear bumper. See Fig. 94 .
CMP Sensor	Right front of engine. See Fig. 112 .
ECT Sensor 1	Rear of engine. See Fig. 74 .
ECT Sensor 2	Left side of engine compartment. See Fig. 81 .
EGR Valve Position Sensor	Rear of engine. See Fig. 74 .
Evaporator Sensor (Rear)	Under center console. See Fig. 127 .
Evaporator Temperature Sensor (Front)	Under left side of dash. See Fig. 140 .
Front A/F Sensor (B2, S1)	Left rear of engine. See Fig. 31 .
Front Passenger's Weight Sensor (Inner Side)	Under front passenger's seat. See Fig. 133 .
Front Passenger's Weight Sensor (Outer Side)	Under front passenger's seat. See Fig. 133 .
Front Secondary HO2S (B2, S2)	Left rear of engine. See Fig. 31 .
Front Vertical Acceleration Sensor	Under left side of dash. See Fig. 141 .
Fuel Tank Pressure (FTP) Sensor	In fuel tank. See Fig. 44 .
Impact Sensor (Left Front)	Behind left side of front bumper. See Fig. 12 .
Impact Sensor (Right Front)	Behind left side of front bumper. See Fig. 23 .
In-Car Temperature Sensor	Behind lower left dash cover. See Fig. 14 .
Input Shaft (Mainshaft) Speed Sensor	On transmission housing. See Fig. 124 .
Left Side Impact Sensor (1st)	Base of left "B" pillar. See Fig. 48 .
Left Side Impact Sensor (2nd)	In left "C" pillar. See Fig. 50 .
MAF/IAT Sensor	In air intake duct. See Fig. 77 .
MAP Sensor	Top of throttle body. See Fig. 78 .
Output Shaft (Countershaft) Speed Sensor	On transmission housing. See Fig. 124 .
Outside Air Temperature Sensor	Forward of radiator. See Fig. 39 .
Power Mirror Position Sensor (Left)	In driver's door mirror. See Fig. 30 .
Power Mirror Position Sensor (Right)	In front passenger's door mirror. See Fig. 41 .
Power Seat Front Up-Down Sensor (Driver's)	Under driver's seat. See Fig. 130 .
Power Seat Rear Up-Down Sensor (Driver's)	Under driver's seat. See Fig. 130 .
Power Seat Recline Position Sensor (Driver's)	In driver's seat back. See Fig. 73 .
Power Seat Slide Sensor (Driver's)	Under driver's seat. See Fig. 130 .

2008 Acura MDX

2008 ACURA MDX

Power Tailgate Pinch Sensor (Left)	Left side of tailgate. See Fig. 86.
Power Tailgate Pinch Sensor (Right)	Right side of tailgate. See Fig. 121.
Power Telescopic Steering Motor/Position Sensor	On steering column. See Fig. 169.
Power Tilt Steering Motor/Position Sensor	On steering column. See Fig. 47.
Rear A/F Sensor (B1, S1)	Right rear of engine. See Fig. 32.
Rear Differential Oil Temperature Sensor	Right side of rear differential. See Fig. 118.
Rear Safing Sensor	Middle of floor. See Fig. 93.
Rear Secondary HO2S (B1, S1)	Right rear of engine. See Fig. 32.
Rear Vertical Acceleration Sensor (Left)	Left side of cargo area. See Fig. 68.
Rear Vertical Acceleration Sensor (Right)	Right side of cargo area. See Fig. 108.
Right Side Impact Sensor (1st)	Base of right "B" pillar. See Fig. 96.
Right Side Impact Sensor (2nd)	In right "C" pillar. See Fig. 98.
Roll Rate Sensor	Middle of floor. See Fig. 93.
Seat Position Sensor (Driver's)	Under driver's seat. See Fig. 129.
Steering Angle Sensor	Behind steering column cover. See Fig. 46.
Stroke/Headlight Leveling Sensor (Left Front)	On left front suspension. See Fig. 58.
Stroke/Headlight Leveling Sensor (Left Rear)	On left side of rear subframe. See Fig. 85.
Stroke Sensor (Right Front)	On right front suspension. See Fig. 104.
Stroke Sensor (Right Rear)	On right rear subframe. See Fig. 120.
Wheel Speed Sensor (Connector) (Left Front)	Lower left front of engine compartment. See Fig. 136.
Wheel Speed Sensor (Connector) (Left Rear)	Left side of rear subframe. See Fig. 84.
Wheel Speed Sensor (Connector) (Right Front)	Lower right front of engine compartment. See Fig. 161.
Wheel Speed Sensor (Connector) (Right Rear)	Right side of rear subframe. See Fig. 119.
Yaw Rate-Lateral/Longitudinal Acceleration Sensor	Under middle of dash. See Fig. 150.

SOLENOIDS & SOLENOID VALVES**SOLENOIDS & SOLENOID VALVES LOCATION**

Component	Location
A/C Compressor Clutch	Left front of engine. See Fig. 115.
A/T Clutch Pressure Control Valve A	On transmission housing. See Fig. 76.
A/T Clutch Pressure Control Valve B	On transmission housing. See Fig. 76.
A/T Clutch Pressure Control Valve C	On transmission housing. See Fig. 125.
A/T Shift Lock Solenoid	Under center console, at base of shift lever assembly. See Fig. 128.
EGR Valve	Rear of engine. See Fig. 74.
Engine Mount Control Solenoid	On transmission housing. See Fig. 123.
EVAP Canister Purge Valve	Top rear of intake manifold. See Fig. 75.
EVAP Canister Vent Shut Valve	Near fuel tank. See Fig. 43.

2008 Acura MDX

2008 ACURA MDX

Fuel Fill Door Opener Solenoid	Left side of cargo area. See Fig. 62.
IMT Actuator	Top front of engine. See Fig. 111.
Injectors No. 1 - No. 6	Top of engine. See Fig. 91.
Rocker Arm Oil Control Solenoid Valve	Under right side of engine compartment. See Fig. 163.
Starter Solenoid	Left rear of engine. See Fig. 76.

SWITCHES**SWITCHES LOCATION**

Component	Location
Brake Fluid Level Switch	On brake fluid reservoir. See Fig. 80.
Brake Pedal Position Switch	Top of brake pedal arm. See Fig. 143.
Door Switch (Driver's)	In left "B" pillar. See Fig. 49.
Door Switch (Front Passenger's)	In right "B" pillar. See Fig. 97.
Door Switch (Left Rear)	In left "C" pillar. See Fig. 50.
Door Switch (Right Rear)	In right "C" pillar. See Fig. 98.
Driver's Seat Belt Buckle Switch (Connector)	Under driver's seat. See Fig. 129.
Front Passenger's Seat Belt Buckle Switch (Connector)	Under front passenger's seat. See Fig. 133.
Hood Switch	Center front of engine compartment. See Fig. 38.
Horn Switch (Positive Terminal)	Inside steering wheel. See Fig. 122.
Key Cylinder Switch (Driver's)	In driver's door. See Fig. 29.
Knob Switch (Driver's)	In driver's door. See Fig. 29.
Knob Switch (Front Passenger's)	In front passenger's door. See Fig. 40.
Knob Switch (Left Rear)	In left rear door. See Fig. 59.
Knob Switch (Right Rear)	In right rear door. See Fig. 105.
Oil Pressure Switch	Under right side of engine compartment. See Fig. 162.
Parking Brake Switch	Under left side of dash. See Fig. 146.
Power Steering Pressure Switch	On power steering pressure line, near gearbox. See Fig. 160.
Power Tailgate Inside Switch	Center of tailgate. See Fig. 27.
Rocker Arm Oil Pressure Switch	Under right side of engine compartment. See Fig. 162.
Tailgate Latch Switch	Center of tailgate. See Fig. 28.
Tailgate Outside Handle Switch	Center of tailgate. See Fig. 26.
Transmission Gear Selection Switch/Park Pin Switch	Under center console. See Fig. 128.
Transmission Range Switch	On transmission housing. See Fig. 76.
Washer Fluid Level Switch	Behind right side of front bumper, on washer reservoir. See Fig. 21.

2008 Acura MDX

Junction Connector C529	Behind right side of dash. See Fig. 157 .
Junction Connector C530	Behind right side of dash. See Fig. 158 .
Junction Connector C608	Under middle of dash. See Fig. 150 .
Junction Connector C612	Left side of cargo area. See Fig. 61 .
Junction Connector C615	Right side of cargo area. See Fig. 106 .
Junction Connector C852	Left front of roof. See Fig. 57 .
Junction Connector C853	Center front of roof. See Fig. 36 .
Junction Connector C854	Center front of roof. See Fig. 36 .
Junction Connector C902	Under middle of dash. See Fig. 152 .
Navigation Service Check Connector	Under driver's seat. See Fig. 132 .
Noise Condenser (High Mount Brake Light)	Left side of cargo area. See Fig. 62 .
Noise Condenser (Rear Defogger)	Left side of cargo area. See Fig. 62 .
Rear Blower Power Transistor	Under center console. See Fig. 126 .
Rearview Camera	Center of tailgate. See Fig. 26 .
Reverse Diode	Left side of cargo area. See Fig. 171 .
Seat Belt Tensioner (Driver's)	Base of left "B" pillar. See Fig. 48 .
Seat Belt Tensioner (Front Passenger's)	Base of right "B" pillar. See Fig. 96 .
Side Airbag Inflator (Driver's)	Under driver's seat. See Fig. 129 .
Side Airbag Inflator (Front Passenger's)	Under front passenger's seat. See Fig. 133 .
Side Curtain Airbag Inflator (Left)	Top of left "C" pillar. See Fig. 51 .
Side Curtain Airbag Inflator (Right)	Top of right "C" pillar. See Fig. 99 .
Stereo Amplifier	Under right side of dash. See Fig. 156 .
TPMS Initiator (Left Front)	Behind left side of front bumper. See Fig. 12 .
TPMS Initiator (Left Rear)	Rear of left rear wheelwell. See Fig. 10 .
TPMS Initiator (Right Front)	Behind right side of front bumper. See Fig. 23 .
TPMS Initiator (Right Rear)	Rear of right rear wheelwell. See Fig. 18 .
Trailer Connectors (4 & 7 Pin)	Under center of rear bumper. See Fig. 15 .

2008 Acura MDX

2008 ACURA MDX

	Under left side of dash. See Fig. 144.
XM Receiver	Right side of cargo area. See Fig. 109.

CONNECTORS**CONNECTORS LOCATION**

Component	Location
C101 (Black, 13 Pin)	Right front of engine compartment. See Fig. 101.
C102 (Black, 1 Pin)	Left rear of engine compartment. See Fig. 80.
C151 (Black, 6 Pin)	Under right side of engine compartment. See Fig. 163.
C152 (Black, 1 Pin)	Top front of engine. See Fig. 111.
C153 (Black, 5 Pin)	Rear of engine. See Fig. 76.
C201 (White, 34 Pin)	Behind right kick panel. See Fig. 17.
C202 (White, 5 Pin)	Behind right kick panel. See Fig. 17.
C203 (Yellow, 4 Pin)	Behind right kick panel. See Fig. 17.
C204 (White, 23 Pin)	Behind right kick panel. See Fig. 17.
C205 (Gray, 2 Pin)	Left front of engine compartment. See Fig. 56.
C206 (White, 14 Pin)	Under left side of dash. See Fig. 141.
C207 (White, 20 Pin)	Under left side of dash. See Fig. 141.
C301 (Black, 3 Pin)	Left front of engine compartment. See Fig. 55.
C303 (Brown, 7 Pin)	Behind left kick panel. See Fig. 8.
C304 (White, 14 Pin)	Under left side of dash. See Fig. 143.
C305 (Yellow, 4 Pin)	Under left side of dash. See Fig. 143.
C306 (Black, 2 Pin)	Left side of engine compartment. See Fig. 80.
C307 (Black, 2 Pin)	Right side of engine compartment. See Fig. 113.
C501 (White, 20 Pin)	In left "A" pillar. See Fig. 70.
C502 (White, 12 Pin)	Under middle of dash. See Fig. 151.
C503 (White, 16 Pin)	Under middle of dash. See Fig. 151.
C531 (White, 8 Pin)	Under steering column. See Fig. 47.
C532 (Light Blue, 6 Pin)	Under steering column. See Fig. 47.
C601 (White, 20 Pin)	Behind left kick panel. See Fig. 8.
C602 (White, 20 Pin)	Under center console. See Fig. 127.
C603 (White, 5 Pin)	Under center console. See Fig. 127.
C604 (White, 12 Pin)	Behind right kick panel. See Fig. 17.
C605 (White, 18 Pin)	Behind right kick panel. See Fig. 17.
C606 (White, 24 Pin)	Under middle of dash. See Fig. 152.
C609 (White, 23 Pin)	Under driver's seat. See Fig. 129.
C610 (White, 14 Pin)	Under front passenger's seat. See Fig. 134.
C611 (Base) (White, 4 Pin)	Left side of cargo area. See Fig. 63.
C611 (Tech, Sport; Canada: Base) (White, 12 Pin)	Left side of cargo area. See Fig. 64.

2008 Acura MDX

2008 ACURA MDX

C613 (Black, 23 Pin)	Under left rear of vehicle. See <u>Fig. 138.</u>
C614 (Base) (White, 2 Pin)	Right side of cargo area. See <u>Fig. 106.</u>
C614 (Tech, Sport) (White, 13 Pin)	Right side of cargo area. See <u>Fig. 107.</u>
C616 (Gray, 4 Pin)	Under front passenger's seat. See <u>Fig. 134.</u>
C617 (Blue/Black, 2 Pin)	Behind left rear wheelwell. See <u>Fig. 11.</u>
C618 (Blue/Black, 2 Pin)	In right rear wheelwell. See <u>Fig. 19.</u>
C619 (Gray, 4 Pin)	Under front passenger's seat. See <u>Fig. 135.</u>
C651 (Gray, 4 Pin)	At rear differential. See <u>Fig. 83.</u>
C652 (Gray, 4 Pin)	At rear differential. See <u>Fig. 118.</u>
C701 (White, 23 Pin)	At left "D" pillar. See <u>Fig. 52.</u>
C702 (Blue, 18 Pin)	Left side of tailgate. See <u>Fig. 86.</u>
C703 (White, 18 Pin)	Right side of tailgate. See <u>Fig. 121.</u>
C704 (White, 12 Pin)	In right "D" pillar. See <u>Fig. 100.</u>
C705 (Gray, 2 Pin)	Left side of cargo area. See <u>Fig. 69.</u>
C751 (White, 20 Pin)	In driver's door. See <u>Fig. 29.</u>
C752 (White, 28 Pin)	In driver's door. See <u>Fig. 4.</u>
C753 (White, 16 Pin)	In driver's door. See <u>Fig. 4.</u>
C771 (White, 23 Pin)	Behind right kick panel. See <u>Fig. 17.</u>
C772 (White, 20 Pin)	In front passenger's door. See <u>Fig. 6.</u>
C773 (White, 16 Pin)	In front passenger's door. See <u>Fig. 6.</u>
C781 (White, 18 Pin)	In left "B" pillar. See <u>Fig. 49.</u>
C791 (White, 18 Pin)	In right "B" pillar. See <u>Fig. 97.</u>
C851 (Blue, 4 Pin)	Left front of roof. See <u>Fig. 57.</u>
C901 (White, 23 Pin)	Under middle of dash. See <u>Fig. 152.</u>
C903 (White, 8 Pin)	Left side of cargo area. See <u>Fig. 65.</u>
C904 (White, 6 Pin)	Left rear of cargo area. See <u>Fig. 66.</u>
C905 (White, 14 Pin)	Behind right side of dash. See <u>Fig. 20.</u>
C931 (White/Green, 8 Pin)	Under driver's seat. See <u>Fig. 129.</u>
C932 (Gray/Blue, 2 Pin)	Right side of driver's seat back. See <u>Fig. 166.</u>
C951 (White, 24 Pin)	In right "A" pillar. See <u>Fig. 110.</u>

GROUPS**GROUPS LOCATION**

Component	Location
G1	Left front of engine compartment. See <u>Fig. 54.</u>
G2	Lower left front of engine compartment. See <u>Fig. 137.</u>
G3	Right front of engine. See <u>Fig. 103.</u>
G101	Right side of engine compartment. See <u>Fig. 114.</u>
G201	Right side of engine compartment. See <u>Fig. 117.</u>

2008 Acura MDX

2008 ACURA MDX

G202	Right side of engine compartment. See Fig. 113.
G301	Left side of engine compartment. See Fig. 82.
G302	Left rear of engine compartment. See Fig. 80.
G303	Lower left front of engine compartment. See Fig. 136.
G401	Behind right kick panel. See Fig. 17.
G501	Under left side of dash. See Fig. 147.
G502	Under left side of dash. See Fig. 147.
G504	Behind right side of dash. See Fig. 158.
G505	Behind right side of dash. See Fig. 158.
G506	Behind right side of dash. See Fig. 158.
G507	Behind right side of dash. See Fig. 157.
G601	Behind left kick panel. See Fig. 9.
G602	On floor, under driver's seat. See Fig. 33.
G603	Left side of cargo area. See Fig. 62.
G604	Left side of cargo area. See Fig. 61.
G605	On floor, under front passenger's seat. See Fig. 34.
G606	Base of right "B" pillar. See Fig. 96.
G701	At left "D" pillar. See Fig. 52.
G702	Center of cargo area floor. See Fig. 25.

SPLICES

SPLICES LOCATION

Component	Location
S103 (Thermal Joint)	Top of transmission housing. See Fig. 123.
S104 (Thermal Joint)	Top of transmission housing. See Fig. 123.
S701 (Thermal Joint)	Left side of cargo area. See Fig. 170.

2007-09 ENGINE PERFORMANCE

Electronic Throttle Control System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Electronic Throttle Control System Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC TROUBLESHOOTING

DTC P0122: TP SENSOR A CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR A in the DATA LIST with the HDS.

Is there about 0.3 V or less?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

4. Check for Temporary DTCs or DTCs with the HDS.

Are DTC P0122 and P0222 indicated at the same time?

YES - Go to step 10.

NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Disconnect the throttle body 6P connector.
7. Jump the SCS line with the HDS.
8. Disconnect PCM connector B (49P).
9. Check for continuity between throttle body 6P connector terminal No. 1 and body ground.

THROTTLE BODY 6P CONNECTOR

Wire side of female terminals

Fig. 2: Identifying Continuity Between Throttle Body 6P Connector Terminal No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the throttle body and the PCM (B17), then go to step 18.

NO - Go to step 23.

10. Disconnect the throttle body 6P connector.
11. Measure voltage between throttle body 6P connector terminal No. 2 and body ground.

THROTTLE BODY 6P CONNECTOR

Wire side of female terminals

Fig. 3: Identifying Voltage Between Throttle Body 6P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 16.

NO - Go to step 12.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect PCM connector B (49P).
15. Check for continuity between PCM connector terminal B18 and throttle body 6P connector terminal No. 2.

Fig. 4: Identifying Continuity Between PCM Connector Terminal B18 And Throttle Body 6P Connector Terminal No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 23.

NO - Repair open in the wire between the throttle body and the PCM (B18), then go to step 18.

16. Turn the ignition switch OFF.
17. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0122 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

23. Reconnect all connectors.
24. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0122 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0123: TP SENSOR A CIRCUIT HIGH VOLTAGE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR A in the DATA LIST with the HDS.

Is there about 4.8 V or more?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

4. Check for Temporary DTCs or DTCs with the HDS.

Are DTC P0123 and P0223 indicated at the same time?

YES - Go to step 13.

NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Disconnect the throttle body 6P connector.
7. Turn the ignition switch ON (II).
8. Measure voltage between throttle body 6P connector terminal No. 1 and body ground.

THROTTLE BODY 6P CONNECTOR

Wire side of female terminals

Fig. 5: Identifying Voltage Between Throttle Body 6P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 18.

NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Jump the SCS line with the HDS.
11. Disconnect PCM connector B (49P).
12. Check for continuity between PCM connector terminal B17 and throttle body 6P connector terminal No. 1.

Terminal side of female terminals

Fig. 6: Identifying Continuity Between PCM Connector Terminal B17 And Throttle Body 6P Connector Terminal No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 25.

NO - Repair open in the wire between the throttle body and the PCM (B17), then go to step 20.

13. Turn the ignition switch OFF.
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect PCM connector B (49P).
17. Check for continuity between PCM connector terminal B33 and throttle body 6P connector terminal No. 4.

Fig. 7: Identifying Continuity Between PCM Connector Terminal B33 And Throttle Body 6P Connector Terminal No. 4

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 25.

NO - Repair open in the wire between the throttle body and the PCM (B33), then go to step 20.

18. Turn the ignition switch OFF.
19. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the PGM with the HDS.
23. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0123 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Electronic Throttle Control System - MDX

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

25. Reconnect all connectors.
26. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0123 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0222: TP SENSOR B CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR B in the DATA LIST with the HDS.

Is there about 0.3 V or less?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

4. Check for Temporary DTCs or DTCs with the HDS.

Are DTC P0122 and P0222 indicated at the same time?

YES - Go to step 10.

NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Disconnect the throttle body 6P connector.

7. Jump the SCS line with the HDS.
8. Disconnect PCM connector B (49P).
9. Check for continuity between throttle body 6P connector terminal No. 3 and body ground.

THROTTLE BODY 6P CONNECTOR

Wire side of female terminals

Fig. 8: Identifying Continuity Between Throttle Body 6P Connector Terminal No. 3 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the throttle body and the PCM (B26), then go to step 18.

NO - Go to step 23.

10. Disconnect the throttle body 6P connector.
11. Measure voltage between throttle body 6P connector terminal No. 2 and body ground.

THROTTLE BODY 6P CONNECTOR

Wire side of female terminals

Fig. 9: Identifying Voltage Between Throttle Body 6P Connector Terminal No. 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 16.

NO - Go to step 12.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect PCM connector B (49P).
15. Check for continuity between PCM connector terminal B18 and throttle body 6P connector terminal No. 2.

Fig. 10: Identifying Continuity Between PCM Connector Terminal B18 And Throttle Body 6P Connector Terminal No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 23.

NO - Repair open in the wire between the throttle body and the PCM (B18), then go to step 18.

16. Turn the ignition switch OFF.
17. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0222 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

23. Reconnect all connectors.
24. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
25. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0222 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0223: TP SENSOR B CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check TP SENSOR B in the DATA LIST with the HDS.

Is there about 4.8 V or more?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

4. Check for Temporary DTCs or DTCs with the HDS.

Are DTC P0123 and P0223 indicated at the same time?

YES - Go to step 13.

NO - Go to step 5.

5. Turn the ignition switch OFF.
6. Disconnect the throttle body 6P connector.
7. Turn the ignition switch ON (II).
8. Measure voltage between throttle body 6P connector terminal No. 3 and body ground.

THROTTLE BODY 6P CONNECTOR

Wire side of female terminals

Fig. 11: Identifying Voltage Between Throttle Body 6P Connector Terminal No. 3 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 18.

NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Jump the SCS line with the HDS.
11. Disconnect PCM connector B (49P).
12. Check for continuity between PCM connector terminal B26 and throttle body 6P connector terminal No. 3.

THROTTLE BODY 6P CONNECTOR

Terminal side of female terminals

Fig. 12: Identifying Continuity Between PCM Connector Terminal B26 And Throttle Body 6P Connector Terminal No. 3

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 25.

NO - Repair open in the wire between the throttle body and the PCM (B26), then go to step 20.

13. Turn the ignition switch OFF.
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect PCM connector B (49P).
17. Check for continuity between PCM connector terminal B33 and throttle body 6P connector terminal No. 4.

Fig. 13: Identifying Continuity Between PCM Connector Terminal B33 And Throttle Body 6P Connector Terminal No. 4

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 25.

NO - Repair open in the wire between the throttle body and the PCM (B33), then go to step 20.

18. Turn the ignition switch OFF.
19. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the PCM with the HDS.
23. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0223 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

25. Reconnect all connectors.
26. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0223 Indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P1658: ETCS CONTROL RELAY ON MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Do the ETCS TEST in the INSPECTION MENU with the HDS.

Is the RELAY circuit OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the under-hood fuse/relay box (ETCS control relay) and the PCM.

NO - Go to step 3.

3. Turn the ignition switch OFF.
4. Test the ETCS control relay in the under-hood fuse/ relay box (see **POWER RELAY TEST**).

ETCS control relay OK?

YES - Go to step 5.

NO - Replace the relay control module (under-hood fuse/relay box) (see **REMOVAL AND INSTALLATION**), then go to step 14.

5. Jump the SCS line with the HDS.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Electronic Throttle Control System - MDX

6. Disconnect PCM connector A (49P).
7. Disconnect the under-hood fuse/relay box connector E (14P).
8. Check for continuity between PCM connector terminal A29 and body ground.

Fig. 14: Identifying Continuity Between PCM Connector Terminal A29 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A29) and the under-hood fuse/relay box (ETCS control relay), then go to step 14.

NO - Go to step 9.

9. Disconnect PCM connector C (49P).
10. Disconnect the under-hood fuse/relay box connector H (9P).
11. Turn the ignition switch ON (II).
12. Measure voltage between PCM connector terminal C4 and body ground.

Fig. 15: Identifying Voltage Between PCM Connector Terminal C4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair short to power in the wire between the PCM (C4) and the under-hood fuse/relay box (ETCS control relay), then go to step 13.

NO - Go to step 19.

13. Turn the ignition switch OFF.
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1658 indicated?

YES - Check for poor connections or loose terminals at the under-hood fuse/relay box (ETCS control relay) and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

19. Turn the ignition switch OFF.
20. Reconnect all connectors.
21. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1658 indicated?

YES - Check for poor connections or loose terminals at the under-hood fuse/relay box (ETCS control relay) and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P1659: ETCS CONTROL RELAY OFF MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Electronic Throttle Control System - MDX

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1659 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the under-hood fuse/relay box (ETCS control relay) and the PCM.

4. Turn the ignition switch OFF.
5. Check the No. 10 THROTTLE ACTUATOR CONTROL (DBW+) (15 A) fuse in the under-hood fuse/relay box.

Is the fuse OK?

YES - Go to step 6.

NO - Go to step 14.

6. Test the ETCS control relay in the under-hood fuse/ relay box (see **POWER RELAY TEST**).

Is the ETCS control relay OK?

YES - Go to step 7.

NO - Replace the relay control module (under-hood fuse/relay box) (see **REMOVAL AND INSTALLATION**), then go to step 22.

7. Jump the SCS line with the HDS.
8. Disconnect PCM connector C (49P).
9. Disconnect the under-hood fuse/relay box connector H (9P).
10. Check for continuity between under-hood fuse/ relay box connector H (9P) terminal No. 7 and PCM connector terminal C4.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Electronic Throttle Control System - MDX

Fig. 16: Identifying Continuity Between Under-Hood Fuse/ Relay Box Connector H (9P) Terminal No. 7 And PCM Connector Terminal C4

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Repair open in the wire between the PCM (C4) and the under-hood fuse/relay box, then go to step 22.

11. Disconnect PCM connector A (49P).
12. Disconnect under-hood fuse/relay box connector E (14P).
13. Check for continuity between under-hood fuse/ relay box connector E (14P) terminal No. 14 and PCM connector terminal A29.

Fig. 17: Identifying Continuity Between Under-Hood Fuse/ Relay Box Connector E Terminal No. 14 And PCM Connector Terminal A29

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wire between the PCM (A29) and the under-hood fuse/relay box, then go to step 22.

14. Jump the SCS line with the HDS.
15. Disconnect PCM connector C (49P).
16. Disconnect the under-hood fuse/relay box connector H (9P).
17. Check for continuity between PCM connector terminal C4 and body ground.

Fig. 18: Identifying Continuity Between PCM Connector Terminal C4 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C4) and the under-hood fuse/relay box, then go to step 22.

NO - Go to step 18.

18. Install the under-hood fuse/relay box connector H (9P), and replace the No. 10 THROTTLE ACTUATOR CONTROL (DBW+) fuse in the under-hood fuse/ relay box.
19. Turn the ignition switch ON (II).
20. Measure voltage between PCM connector terminal C4 and body ground.

Fig. 19: Identifying Voltage Between PCM Connector Terminal C4 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 27.

NO - Replace the right side engine compartment wire harness. Also replace the No. 10 THROTTLE ACTUATOR CONTROL (DBW+) fuse in the under-hood fuse/relay box, then go to step 21.

21. Turn the ignition switch OFF.
22. Reconnect all connectors.
23. Turn the ignition switch ON (II).
24. Reset the PCM with the HDS.
25. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1659 indicated?

YES - Check for poor connections or loose terminals at the under-hood fuse/relay box and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

27. Reconnect all connectors.
28. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1659 indicated?

YES - Check for poor connections or loose terminals at the under-hood fuse/relay box and the PCM. If

the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P1683: THROTTLE VALVE DEFAULT POSITION SPRING PERFORMANCE PROBLEM

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Turn the ignition switch OFF, and wait 10 seconds.
5. Turn the ignition switch ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1683 indicated?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

7. Turn the ignition switch OFF.
8. Disconnect the intake air duct from the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
9. Push the throttle valve closed as shown.

Fig. 20: Identifying Throttle Valve For Closed
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Release the throttle valve.

Does the throttle valve return?

YES - Clean the throttle body (see **THROTTLE BODY CLEANING**), then go to step 12.

NO - Go to step 11.

11. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
12. Turn the ignition switch ON (II).
13. Reset the PCM with the HDS.
14. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
15. Turn the ignition switch OFF, and wait 10 seconds.
16. Turn the ignition switch ON (II).
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1683 indicated?

YES - If the throttle body was cleaned, go to step 11. If the throttle body was replaced, check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P1684: THROTTLE VALVE RETURN SPRING PERFORMANCE PROBLEM

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Turn the ignition switch OFF, and wait 10 seconds.
5. Turn the ignition switch ON (II).
6. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1684 indicated?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

7. Turn the ignition switch OFF.
8. Disconnect the intake air duct from the throttle body (see THROTTLE BODY REMOVAL/INSTALLATION).
9. Push the throttle valve open as shown.

Fig. 21: Identifying Throttle Valve For Open
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Release the throttle valve.

Does the throttle valve return?

YES - Clean the throttle body (see THROTTLE BODY CLEANING), then go to step 12.

NO - Go to step 11.

11. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
12. Turn the ignition switch ON (II).
13. Reset the PCM with the HDS.
14. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
15. Turn the ignition switch OFF, and wait 10 seconds.
16. Turn the ignition switch ON (II).
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1684 indicated?

YES - If the throttle body was cleaned, go to step 11. If the throttle body was replaced, check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2101: ETCS MALFUNCTION

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2101 indicated?

YES - Go to step 7.

NO - Go to step 5.

5. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - APP SENSOR A

6. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2101 indicated?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM, then clean the throttle body (see **THROTTLE BODY CLEANING**).

7. Turn the ignition switch OFF.
8. Disconnect the intake air duct from the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
9. Turn the ignition switch ON (II).
10. Clear the DTC with the HDS.
11. Do the ETCS TEST in the INSPECTION MENU with the HDS.
12. Visually check the throttle valve operation.

Does the throttle valve operate smoothly?

YES - Clean the throttle body (see **THROTTLE BODY CLEANING**), then go to step 22 and recheck. If DTC P2101 is indicated, go to step 19.

NO - Go to step 13

13. Turn the ignition switch OFF.
14. Disconnect the throttle body 6P connector.
15. Jump the SCS line with the HDS.
16. Disconnect PCM connector C (49P).
17. Connect throttle body 6P connector terminals No. 5 and No. 6 with a jumper wire.

THROTTLE BODY 6P CONNECTOR

Wire side of female terminals

Fig. 22: Identifying Throttle Body 6P Connector Terminals No. 5 And No. 6 With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Check for continuity between PCM connector terminals C2 and C3.

Fig. 23: Identifying Continuity Between PCM Connector Terminals C2 And C3
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wires between the throttle body and the PCM (C2, C3), then go to step 21.

19. Turn the ignition switch OFF.
20. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
21. Reconnect all connectors.
22. Turn the ignition switch ON (II).
23. Reset the PCM with the HDS.
24. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
25. Test-drive the vehicle for several minutes in the range of these recorded freeze data parameters:
 - ENGINE SPEED
 - VSS
 - APP SENSOR A
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2101 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM, then clean the throttle body (see **THROTTLE BODY CLEANING**), and go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to .

27. Reconnect all connectors.
28. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2101 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2118: THROTTLE ACTUATOR CURRENT RANGE/ PERFORMANCE PROBLEM

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Jump the SCS line with the HDS.
2. Disconnect PCM connector C (49P).
3. Measure resistance between PCM connector terminals C2 and C3.

Terminal side of female terminals

Fig. 24: Identifying Resistance Between PCM Connector Terminals C2 And C3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 1.0 ohms or less?

YES - Go to step 4.

NO - Go to step 15.

4. Disconnect the throttle body 6P connector.
5. At the throttle body side, measure resistance between throttle body 6P connector terminals No. 5 and No. 6 with the throttle fully closed.

THROTTLE BODY 6P CONNECTOR

Terminal side of male terminals

Fig. 25: Identifying Resistance Between Throttle Body 6P Connector Terminals No. 5 And No. 6 With Throttle

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 1.0 ohms or less?

YES - Go to step 6.

NO - Repair short in the wires between the PCM C3 (ETCSM-line) and C4 (ETCSM+line), then go to step 7.

6. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
7. Reconnect all connectors.
8. Turn the ignition switch ON (II).
9. Reset the PCM with the HDS.
10. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
11. Turn the ignition switch OFF.
12. Turn the ignition switch ON (II).
13. Slowly press the accelerator pedal to the floor.
14. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2118 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

15. Reconnect all connectors.
16. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
17. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2118 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see SUBSTITUTING THE PCM), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see PCM REPLACEMENT). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2122: APP SENSOR A (TP SENSOR D) CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Check APP SENSOR A in the DATA LIST with the HDS.

Is there about 0.2 V or less?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor A and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between APP sensor 6P connector terminals No. 2 and No. 3.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 26: Identifying Voltage Between APP Sensor 6P Connector Terminals No. 2 And No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 7.

NO - Go to step 17.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Check for continuity between APP sensor 6P connector terminal No. 1 and body ground.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 27: Identifying Continuity Between APP Sensor 6P Connector Terminal No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A18) and APP sensor A, then go to step 24.

NO - Go to step 11.

11. Connect APP sensor 6P connector terminal No. 1 to body ground with a jumper wire.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 28: Identifying APP Sensor 6P Connector Terminal No. 1 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check for continuity between PCM connector terminal A18 and body ground.

Fig. 29: Checking Continuity Between PCM Connector Terminal A18 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire between the PCM (A18) and APP sensor A, then go to step 24.

13. Reconnect PCM connector A (49P).
14. Connect APP sensor 6P connector terminals No. 1 and No. 3 with a jumper wire.

Fig. 30: Identifying APP Sensor 6P Connector Terminals No. 1 And No. 3 With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Turn the ignition switch ON (II).
16. Check APP SENSOR A in the DATA LIST with the HDS.

Is there about 0.2 V or less?

YES - Go to step 29.

NO - Go to step 22.

17. Turn the ignition switch OFF.
18. Jump the SCS line with the HDS.

19. Disconnect PCM connector A (49P).
20. Connect APP sensor 6P connector terminal No. 3 to body ground with a jumper wire.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 31: Identifying APP Sensor 6P Connector Terminal No. 3 To Body Ground With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Check for continuity between PCM connector terminal A24 and body ground.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 32: Identifying Continuity Between PCM Connector Terminal A24 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 30.

NO - Repair open in the wire between the PCM (A24) and APP sensor A, then go to step 24.

22. Turn the ignition switch OFF.
23. Replace the accelerator pedal module (see **ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION**).
24. Reconnect all connectors.
25. Turn the ignition switch ON (II).
26. Reset the PCM with the HDS.

27. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2122 indicated?

YES - Check for poor connections or loose terminals at APP sensor A and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

29. Turn the ignition switch OFF.
30. Reconnect all connectors.
31. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2122 indicated?

YES - Check for poor connections or loose terminals at APP sensor A and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2123: APP SENSOR A (TP SENSOR D) CIRCUIT HIGH VOLTAGE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch ON (II).
2. Check APP SENSOR A in the DATA LIST with the HDS.

Is there about 4.9 V or more?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor A and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the APP sensor 6P connector.

5. Turn the ignition switch ON (II).
6. Measure voltage between APP sensor 6P connector terminals No. 2 and No. 3.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 33: Identifying Voltage Between APP Sensor 6P Connector Terminals No. 2 And No. 3
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 12.

NO - Go to step 7.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Connect APP sensor 6P connector terminal No. 2 to body ground with a jumper wire.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 34: Identifying APP Sensor 6P Connector Terminal No. 2 To Body Ground With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between PCM connector terminal A26 and body ground.

Fig. 35: Identifying Continuity Between PCM Connector Terminal A26 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 19.

NO - Repair open in the wire between the PCM (A26) and APP sensor A, then go to step 14.

12. Turn the ignition switch OFF.
13. Replace the accelerator pedal module (see **ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2123 indicated?

YES - Check for poor connections or loose terminals at APP sensor A and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

19. Reconnect all connectors.
20. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2123 indicated?

YES - Check for poor connections or loose terminals at APP sensor A and the PCM. If the PCM was

updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2127: APP SENSOR B (TP SENSOR E) CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check APP SENSOR B in the DATA LIST with the HDS.

Is there about 0.2 V or less?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at APP sensor B and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the APP sensor 6P connector.
5. Turn the ignition switch ON (II).
6. Measure voltage between APP sensor 6P connector terminals No. 5 and No. 6.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 36: Identifying Voltage Between APP Sensor 6P Connector Terminals No. 5 And No. 6
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 7.

NO - Go to step 17.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Check for continuity between APP sensor 6P connector terminal No. 4 and body ground.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 37: Identifying Continuity Between APP Sensor 6P Connector Terminal No. 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A19) and APP sensor B, then go to step 24.

NO - Go to step 11.

11. Connect APP sensor 6P connector terminal No. 4 to body ground with a jumper wire.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 38: Identifying APP Sensor 6P Connector Terminal No. 4 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check for continuity between PCM connector terminal A19 and body ground.

Fig. 39: Identifying Continuity Between PCM Connector Terminal A19 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire between the PCM (A19) and APP sensor B, then go to step 24.

13. Reconnect PCM connector A (49P).
14. Connect APP sensor 6P connector terminals No. 4 and No. 6 with a jumper wire.

APP SENSOR 6P CONNECTOR

Fig. 40: Identifying APP Sensor 6P Connector Terminals No. 4 And No. 6 With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Turn the ignition switch ON (II).
16. Check APP SENSOR B in the DATA LIST with the HDS.

Is there about 0.2 V or less?

YES - Go to step 29.

NO - Go to step 22.

17. Turn the ignition switch OFF.
18. Jump the SCS line with the HDS.

19. Disconnect PCM connector A (49P).
20. Connect APP sensor 6P connector terminal No. 6 to body ground with a jumper wire.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 41: Identifying APP Sensor 6P Connector Terminal No. 6 To Body Ground With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Check for continuity between PCM connector terminal A25 and body ground.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 42: Identifying Continuity Between PCM Connector Terminal A25 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 30.

NO - Repair open in the wire between the PCM (A25) and APP sensor B, then go to step 24.

22. Turn the ignition switch OFF.
23. Replace the accelerator pedal module (see **ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION**).
24. Reconnect all connectors.
25. Turn the ignition switch ON (II).
26. Reset the PCM with the HDS.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Electronic Throttle Control System - MDX

27. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2127 indicated?

YES - Check for poor connections or loose terminals at APP sensor B and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

29. Turn the ignition switch OFF.
30. Reconnect all connectors.
31. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2127 indicated?

YES - Check for poor connections or loose terminals at APP sensor B and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2128: APP SENSOR B (TP SENSOR E) CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Check APP SENSOR B in the DATA LIST with the HDS.

Is there about 4.0 V or more?

YES - Go to step 3.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals APP sensor B and the PCM.

3. Turn the ignition switch OFF.
4. Disconnect the APP sensor 6P connector.

5. Turn the ignition switch ON (II).
6. Measure voltage between APP sensor 6P connector terminals No. 5 and No. 6.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 43: Identifying Voltage Between APP Sensor 6P Connector Terminals No. 5 And No. 6
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 12.

NO - Go to step 7.

7. Turn the ignition switch OFF.
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Connect APP sensor 6P connector terminal No. 5 to body ground with a jumper wire.

APP SENSOR 6P CONNECTOR

Wire side of female terminals

Fig. 44: Identifying APP Sensor 6P Connector Terminal No. 5 To Body Ground With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between PCM connector terminal A27 and body ground.

Fig. 45: Identifying Continuity Between PCM Connector Terminal A27 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 19.

NO - Repair open in the wire between the PCM (A27) and APP sensor B, then go to step 14.

12. Turn the ignition switch OFF.
13. Replace the accelerator pedal module (see **ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2128 indicated?

YES - Check for poor connections or loose terminals at APP sensor B and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

19. Reconnect all connectors.
20. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2128 indicated?

YES - Check for poor connections or loose terminals at APP sensor B and the PCM. If the PCM was

updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2135: TP SENSOR A/B VOLTAGE INCORRECT CORRELATION

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the ETCS TEST in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2135 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM.

5. Turn the ignition switch OFF.
6. Disconnect the intake air duct from the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
7. Turn the ignition switch ON (II).
8. Visually check the throttle valve operation while you clear the DTC with the HDS.

Does the valve temporarily move to the fully closed position?

YES - Go to step 15.

NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Jump the SCS line with the HDS.
11. Disconnect PCM connector B (49P).

12. Check for continuity between PCM connector terminals B17 and B26.

Terminal side of female terminals

Fig. 46: Identifying Continuity Between PCM Connector Terminals B17 And B26
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Go to step 22.

13. Disconnect the throttle body 6P connector.
14. Check for continuity between PCM connector terminals B17 and B26.

Terminal side of female terminals

Fig. 47: Identifying Continuity Between PCM Connector Terminals B17 And B26
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM B17 (TPSA line) and the B26 (TPSB line), then go to step 17.

NO - Go to step 15.

15. Turn the ignition switch OFF.
16. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
17. Reconnect all connectors.
18. Turn the ignition switch ON (II).
19. Reset the PCM with the HDS.
20. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
21. Identifying for Temporary DTCs or DTCs with the HDS.

Is DTC P2135 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

22. Reconnect all connectors.
23. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
24. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2135 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2138: APP SENSOR A/B (TP SENSOR D/E) INCORRECT VOLTAGE CORRELATION

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with HDS.
3. Press the accelerator pedal to the floor.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2138 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the APP sensor and the PCM.

5. Check APP SENSOR A and APP SENSOR B in the DATA LIST with the HDS.

Are they the same voltage?

YES - Go to step 6.

NO - Go to step 12.

6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Disconnect PCM connector A (49P).
9. Check for continuity between PCM connector terminals A18 and A19.

Fig. 48: Identifying Continuity Between PCM Connector Terminals A18 And A19
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Go to step 22.

10. Disconnect the APP sensor 6P connector.
11. Check for continuity between PCM connector terminals A18 and A19.

Terminal side of female terminals

Fig. 49: Identifying Continuity Between PCM Connector Terminals A18 And A19
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wires between PCM connector terminals A18 (APSA line) and A19 (APSB line), then go to step 14.

NO - Go to step 13.

12. Turn the ignition switch OFF.
13. Replace the accelerator pedal module (see **ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION**).
14. Reconnect all connectors.
15. Turn the ignition switch ON (II).
16. Reset the PCM with the HDS.
17. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
18. Turn the ignition switch OFF.
19. Turn the ignition switch ON (II).
20. Press the accelerator pedal to the floor.
21. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2138 indicated?

YES - Check for poor connections or loose terminals at APP sensor A/B and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

22. Reconnect all connectors.
23. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).

24. Turn the ignition switch OFF.
25. Turn the ignition switch ON (II).
26. Press the accelerator pedal to the floor.
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2138 indicated?

YES - Check for poor connections or loose terminals at APP sensor A/B and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 24. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P2176: THROTTLE ACTUATOR CONTROL SYSTEM IDLE POSITION NOT LEARNED

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- If DTC P2135 is stored at the same time as DTC P2176, troubleshoot DTC P2135 first, then recheck for DTC P2176.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Turn the ignition switch ON (II), and wait 10 seconds.
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2176 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the throttle body and the PCM, then clean the throttle body (see **THROTTLE BODY TEST**).

6. Turn the ignition switch OFF.
7. Disconnect the intake air duct from the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).

8. Turn the ignition switch ON (II).
9. Clear the DTC with the HDS.
10. Visually check the throttle valve operation while doing the ETCS TEST in the INSPECTION MENU with the HDS.

Does the throttle valve move to its fully closed position?

YES - Go to step 11.

NO - Go to step 12.

11. Check for sludge or carbon on the throttle valve.

Is there sludge or carbon on the throttle valve?

YES - Clean the throttle body (see **THROTTLE BODY CLEANING**), then go to step 21.

NO - Go to step 18.

12. Turn the ignition switch OFF.
13. Disconnect the throttle body 6P connector.
14. Jump the SCS line with the HDS.
15. Disconnect PCM connector C (49P).
16. Connect throttle body 6P connector terminals No. 5 and No. 6 with a jumper wire.

THROTTLE BODY 6P CONNECTOR

Wire side of female terminals

Fig. 50: Identifying Throttle Body 6P Connector Terminals No. 5 And No. 6 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Check for continuity between PCM connector terminals C2 and C3.

Terminal side of female terminals

Fig. 51: Identifying Continuity Between PCM Connector Terminals C2 And C3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 27.

NO - Repair open in the wires between the throttle body and the PCM (C2, C3), then go to step 20.

18. Turn the ignition switch OFF.
19. Replace the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
20. Reconnect all connectors.
21. Turn the ignition switch ON (II).
22. Reset the PCM with the HDS.
23. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
24. Turn the ignition switch OFF.
25. Turn the ignition switch ON (II), and wait 10 seconds.
26. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2176 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

27. Reconnect all connectors.
28. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P2176 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

APP SENSOR SIGNAL INSPECTION

NOTE:

- This procedure checks the APP sensor in its fully closed position. In any other position, the APP sensor stores DTCs which are covered in other troubleshooting procedures.
- Check for Temporary DTCs or DTCs with the HDS before doing this procedure. If any DTCs are indicated, troubleshoot them first, then do this procedure.
- Press the accelerator pedal several times to check its operation. If it does not operate smoothly, check the pedal. If you find a problem, replace the accelerator pedal module (see **ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION**).

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 52: Connect HDS To DLC

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the PCM. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Make sure the accelerator pedal is not pressed, then check the APP SENSOR in the DATA LIST with the HDS.

- If it is 0%, the APP sensor is OK.
 - If it is not 0%, update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 5.
5. Make sure the accelerator pedal is not pressed, then check the APP SENSOR in the DATA LIST with the HDS.
- If it is 0%, the APP sensor is OK.
 - If it is not 0%, replace the accelerator pedal module (see **ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION**), then go to step 1.

ACCELERATOR PEDAL MODULE REMOVAL/INSTALLATION

1. Disconnect the accelerator pedal position (APP) sensor 6P connector (A).

Fig. 53: Identifying Accelerator Pedal Position (APP) Sensor 6P Connector With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the accelerator pedal module (B).

NOTE: The APP sensor is not available separately. Do not disassemble the accelerator pedal module.

3. Install the parts in the reverse order of removal.

Engine Assembly - MDX

SPECIAL TOOLS

Ref. No.	Tool Number	Description	Qty
①	070AG-SJAA10S	Frame Positioning Guide Pin	1

①

Fig. 1: Identifying Special Tools

Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENGINE REMOVAL

Special Tools Required

- Front subframe adapter EQS02BMDXSB0
- Engine support hanger A and Reds AAR-T-12566
- Engine hanger balance bar VSB02C000019
- Engine hanger adapter set VSB02C000031

These special tools are available through the Acura Tool and Equipment program, 1-888-424-6857.

NOTE:

- Use fender covers to avoid damaging painted surfaces.
- To avoid damaging the wiring and terminals, unplug the wiring connectors carefully while holding the connector portion.
- Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring, hoses, or interfere with other parts.

1. Remove the support struts from the engine hood. Move the engine hood to a vertical position, then reinstall the support strut as shown.

Fig. 2: Identifying Support Struts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
3. Drain the power steering system fluid, then plug the fluid reservoir and return hose (see **FLUID REPLACEMENT**).
4. Remove the bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
5. Do the battery terminal disconnection procedure (See **DISCONNECTION**).
6. Remove the battery.
7. Remove the engine cover.

Fig. 3: Identifying Engine Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the breather pipe (A), then remove the air intake duct (B).

Fig. 4: Identifying Breather Pipe And Air Intake Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the air cleaner assembly (see **AIR CLEANER ELEMENT / REPLACEMENT**).
10. Remove the main under-hood fuse box (A), then remove the harness clamps (B).

Fig. 5: Identifying Main Under-Hood Fuse Box And Harness Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the harness clamps (A), then remove the battery base (B).

Fig. 6: Identifying Harness Clamps And Battery Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the positive starter cable (A).

Fig. 7: Identifying Positive Starter Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the shift cable (see **SHIFT CABLE REPLACEMENT**).
14. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (B) (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

Fig. 8: Identifying Quick-Connect Fitting Cover And Fuel Feed Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Disconnect the brake booster vacuum hose (A), and evaporative emission (EVAP) canister hose (B).

Fig. 9: Identifying Brake Booster Vacuum Hose And Evaporative Emission Canister Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Disconnect the EVAP canister purge valve connector (C).
17. Remove the steering wheel (see **STEERING WHEEL REMOVAL**).
18. Remove the steering joint cover (A).

Fig. 10: Identifying Steering Joint Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Make a reference mark (B) across the steering joint and steering gearbox pinion shaft. Remove the steering joint bolt (C), and loosen the steering joint bolt (D), then disconnect the steering joint from the steering gearbox pinion shaft (E).
20. Remove the alternator cable (A) from the main under-hood fuse box.

Fig. 11: Identifying Alternator Cable And Main Under-Hood Fuse Box

Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Remove the coolant reservoir from the bracket.
22. Remove the bracket (A), then remove the powertrain control module (PCM) cover (B).

Fig. 12: Identifying Bracket And Powertrain Control Module Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Remove the harness clamps (A), then disconnect the two PCM connectors (B) and engine wire harness connector (C).

Fig. 13: Identifying Harness Clamps, PCM Connectors And Engine Wire Harness Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Remove the drive belt (see **DRIVE BELT INSPECTION**).
25. Remove the power steering (P/S) pump inlet hose (A) and P/S pump outlet hose (B) from the P/S pump, then plug the P/S lines and P/S pump.

Fig. 14: Identifying Power Steering (P/S) Pump Inlet Hose And P/S Pump Outlet Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Remove the P/S hose clamp (C) from the cylinder head cover.
27. Remove the radiator cap.
28. Raise the vehicle on the lift .
29. Remove the front wheels.
30. Remove the splash shield.

Fig. 15: Identifying Splash Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Loosen the drain plug in the radiator, and drain the engine coolant (see **COOLANT CHECK**).
32. Drain the automatic transmission fluid (ATF) (see **ATF COOLER REPLACEMENT**).
33. Drain the engine oil (see **ENGINE OIL REPLACEMENT**).
34. Remove the front subframe stiffener.

Fig. 16: Identifying Front Subframe Stiffener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Remove exhaust pipe A.

Fig. 17: Identifying Exhaust Pipe A
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Separate the stabilizer links from the dampers (see **STABILIZER LINK REMOVAL/INSTALLATION**).
37. Separate the tie-rod end ball joints from the knuckles (see step 4 on **KNUCKLE/HUB BEARING UNIT REPLACEMENT**).
38. Separate the knuckles from the lower arms (see step 7 on **KNUCKLE/HUB BEARING UNIT REPLACEMENT**).
39. Remove the driveshafts (see **FRONT DRIVESHAFT REMOVAL**). Coat all precision-finished surfaces with new engine oil. Tie plastic bags over the driveshaft ends.

40. Remove the propeller shaft from the transfer shaft flange (see **PROPELLER SHAFT REMOVAL**).
41. Remove the transfer assembly (see **TRANSFER ASSEMBLY REMOVAL**).
42. Disconnect the P/S hose (A), then plug the line and hose.

Fig. 18: Identifying P/S Hose

Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. Disconnect the power steering pressure switch connector.

Fig. 19: Identifying Power Steering Pressure Switch Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

44. Remove the transmission lower mount bolts (A) and ground cable (B).

Fig. 20: Identifying Transmission Lower Mount Bolts And Ground Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

45. Remove the rear mount bolts (A), and power steering line bracket (B).

Fig. 21: Identifying Rear Mount Bolts And Power Steering Line Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

46. Lower the vehicle on the lift.
47. Disconnect the A/C compressor clutch connector (A), then remove the A/C compressor (B) without disconnecting the A/C hoses.

Fig. 22: Identifying A/C Compressor Clutch Connector And A/C Compressor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

48. Disconnect the heater hoses (A).

Fig. 23: Identifying Heater Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

49. Disconnect the upper radiator hose (A) and lower radiator hose (B).

Fig. 24: Identifying Upper Radiator Hose And Lower Radiator Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

50. Disconnect the ATF cooler hoses from the transmission, then plug the ATF cooler hoses and lines.

Fig. 25: Identifying Plug ATF Cooler Hoses And Lines
Courtesy of AMERICAN HONDA MOTOR CO., INC.

51. Remove the radiator (see **RADIATOR AND FAN REPLACEMENT**).
52. Remove the connector bracket from the front cylinder head; use the bracket bolt hole to attach the engine balance bar front arm.

Fig. 26: Identifying Bracket Bolt

Courtesy of AMERICAN HONDA MOTOR CO., INC.

53. Remove the bracket (A) from the rear cylinder head; use the bracket bolt hole to attach the engine balance bar rear arm.

Fig. 27: Identifying Bracket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

54. Remove the service caps (A) for the front damper flange nuts from the cowl cover (B). Position the engine hanger adapters (VSB02C000031) with the "FRONT" mark facing forward over the damper flange nuts.

Fig. 28: Identifying Engine Hanger Adapters (VSB02C000031)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

55. Install the engine hanger balance bar (VSB02C000019); attach the front arm (A) to the front cylinder head with a spacer (B) and 10 x 1.25 mm bolt (C), attach the rear arm (D) to the rear cylinder head with an 8 x 1.25 mm bolt (E).

Fig. 29: Identifying Front Arm
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

56. Install the engine support hanger (AAR-T-12566) to the vehicle, and attach the hook to the slotted hole in the engine hanger balance bar. Tighten the wing nut (F) by hand to lift and support the engine/transmission.
57. Raise the vehicle on the lift to full height.
58. Disconnect the front engine mount control solenoid valve tube (A), then remove the front engine mount

bolts (B).

Fig. 30: Identifying Front Engine Mount Control Solenoid Valve Tube And Front Engine Mount Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

59. With active damper system: Disconnect the front suspension stroke sensor connectors (A), then remove the harness clamps (B):

Fig. 31: Identifying Front Suspension Stroke Sensor Connectors And Harness Clamps

Courtesy of AMERICAN HONDA MOTOR CO., INC.

60. Loosen the four bolts (A) holding the adjustable arms (B) of the front subframe adapter (EQS02BMDXSBO) to its center plate.

Fig. 32: Identifying Bolts Holding Adjustable Arms Of Front Subframe Adapter (EQS02BMDXSBO)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

61. Line up the slots in the arms with the bolt holes on the corner of the jack base, then attach the front subframe adapter (A) to the jack base with the bolts (B) that came with the jack. Tighten all bolts securely.

Fig. 33: Identifying Front Subframe Adapter To Jack Base With Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

62. Raise the jack to vehicle height, then attach the front subframe adapter to the front subframe using the subframe stiffener mounting bolts (C) and bolt holes.
63. Remove the six 12 x 1.25 mm bolts (A) securing the subframe stiffeners (B), the four subframe mounting bolts (C), and the stiffeners, then lower the front subframe (D).

Fig. 34: Identifying Subframe Mounting Bolts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

64. Lower the vehicle and attach a chain hoist (A) to the engine hook (B) and transmission hook (C). Lift up on the engine/transmission until it's securely supported by the chain hoist, then remove the engine support hanger and the engine balance bar from the engine and vehicle.

Fig. 35: Identifying Chain Hoist, Engine Hook And Transmission Hook
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

65. Remove the mounting bolts from the upper half of the side engine mount bracket.

Fig. 36: Identifying Side Engine Mount Bracket Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

66. Check that the engine/transmission is completely free of vacuum hoses, fuel and coolant hoses, and electrical wiring.
67. Slowly lower the engine/transmission about 150 mm (6 in.). Check once again that all hoses and electrical wiring are disconnected and free from the engine/transmission, then lower it all the way.
68. Disconnect the chain hoist from the engine/transmission.
69. Raise the vehicle all the way on the lift, then remove the engine/transmission from under the vehicle.

ENGINE INSTALLATION

Special Tools Required

- Frame positioning guide pin 070AG-SJAA10S
- Front subframe adapter EQS02BMDXSB0 *
- Engine support hanger A and Reds AAR-T-12566 *
- Engine hanger balance bar VSB02C000019 *
- Engine hanger adapter set VSB02C000031 *

* These special tools are available through the Acura Tool and Equipment program, 1-888-424-6857.

1. Install the engine mount bracket and accessory brackets, and tighten their bolts to the specified torque.

2008 Acura MDX

2007-09 ENGINE Engine Assembly - MDX

Fig. 37: Identifying Engine Mount Bracket And Accessory Brackets With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Position the engine/transmission under the vehicle. Be sure that they are properly aligned. Carefully lower the vehicle until the engine and transmission are properly positioned in the engine compartment. Make sure the vehicle is not resting on any part of the engine or transmission. Lift and support the engine with a chain hoist (A), and carefully raise the engine/transmission into place.

NOTE: Reinstall the mounting bolts/support nuts in the sequence given in the following steps. Failure to follow this sequence may cause excessive noise and vibration, and reduce engine mount life.

Fig. 38: Identifying Chain Hoist

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the service caps (A) for the front damper flange nuts from the cowl cover (B). Position the engine hanger adapters (VSB02C000031) with the "FRONT" mark facing forward over the damper flange nuts.

Fig. 39: Identifying Engine Hanger Adapters (VSB02C000031)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the engine hanger balance bar (VSB02C000019); attach the front arm (A) to the front cylinder head with a spacer (B) and 10 x 1.25 mm bolt (C), attach the rear arm (D) to the rear cylinder head with 8 x 1.25 mm bolt (E).

Fig. 40: Identifying Engine Hanger Balance Bar (VSB02C000019)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the engine support hanger (AAR-T-12566) to the vehicle, and attach the hook to the slotted hole in the engine hanger balance bar. Tighten the wing nut (F) by hand to lift and support the engine/transmission.
6. Install new mounting bolts into the upper half of the side engine mount bracket. Tighten the bolts to the specified torque.

Fig. 41: Identifying Side Engine Mount Bracket Mounting Bolts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the chain hoist, then raise the vehicle on the lift .
8. Using the subframe adapter (EQS02BMDXSB0) and a jack, raise the front subframe up to the body.

Fig. 42: Identifying Subframe Adapter (EQS02BMDXSB0) And Jack With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Loosely install the new front subframe mounting bolts (four) (B), the 12 x 1.25 mm bolts (six) (C) (D), and the stiffeners (E).
10. Loosely tighten the right rear subframe mounting bolt (A); insert the frame positioning guide pin (070AG-SJAA10S) through the positioning hole (B) on the rear stiffener, through the positioning hole (C) on the subframe, and into the positioning hole (D) on the body, then tighten the subframe mounting bolt.

Fig. 43: Identifying Right Rear Subframe Mounting Bolt And Frame Positioning Guide Pin (070AG-SJAA10S) With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Loosely tighten the left rear subframe mounting bolt in the same manner in step 10.
12. Loosely tighten the right and left front subframe mounting bolts.
13. Loosen the right rear mounting bolt, then tighten the bolt to the specified torque.
14. Tighten the left rear mounting bolt to the specified torque.
15. Tighten the right and left front mounting bolts to the specified torque.
16. Check that the positioning holes and slot are aligned using the frame positioning guide pin.
17. Tighten the rear and front stiffener mounting bolts to the specified torque.
18. Remove the jack and front subframe adapter.
19. Tighten the transmission lower mount bolts (A) and ground cable (B).

Fig. 44: Identifying Transmission Lower Mount Bolts And Ground Cable With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Tighten the rear mount bolts (A) and power steering line bracket (B).

Fig. 45: Identifying Rear Mount Bolts And Power Steering Line Bracket With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Tighten the front mount bolts (A), then connect the front engine mount control solenoid valve tube (B).

Fig. 46: Identifying Front Mount Bolts And Front Engine Mount Control Solenoid Valve Tube With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Lower the vehicle on the lift.
23. Loosen the mounting bolts for the upper half of the side engine mount bracket, then retighten them to the specified torque.

Fig. 47: Identifying Side Engine Mount Bracket Mounting Bolts Tightening Torque With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Remove the engine support hanger and engine hanger balance bar.
25. Install the A/C compressor (A), then connect the A/C compressor clutch connector (B).

Fig. 48: A/C Compressor And A/C Compressor Clutch Connector With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Install the radiator (see **RADIATOR AND FAN REPLACEMENT**).
27. Raise the vehicle on the lift .
28. Install the power steering (P/S) hose (A).

Fig. 49: Identifying Power Steering (P/S) Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Connect the power steering pressure switch connector.

Fig. 50: Identifying Power Steering Pressure Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Install the transfer assembly (see **TRANSFER ASSEMBLY INSTALLATION**).
31. Install the propeller shaft onto the transfer shaft flange (see **PROPELLER SHAFT INSTALLATION**).
32. Wipe the driveshaft clean. Install a new set ring on the end of each driveshaft, then install the driveshafts. Make sure each ring "clicks" into place in the differential and intermediate shaft.
33. Connect the suspension lower arms to the knuckles (see step 9 on **REMOVAL/INSTALLATION**).
34. Connect the tie-rod end ball joints to the knuckles (see step 28 on **STEERING GEARBOX INSTALLATION**).
35. Connect the stabilizer links to the dampers (see **STABILIZER LINK REMOVAL/INSTALLATION**).
36. Install exhaust pipe A using new gaskets (B) and new self-locking nuts (C).

Fig. 51: Identifying Exhaust Pipe, Gaskets And Self-Locking Nuts With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. With active damper system: Connect the front suspension stroke sensor connectors (A), then install the harness clamps (B).

Fig. 52: Identifying Front Suspension Stroke Sensor Connectors And Harness Clamps
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

38. Install the front subframe stiffener using hew bolts.

Fig. 53: Identifying Front Subframe Stiffener And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Install the splash shield.

Fig. 54: Identifying Splash Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

40. Install the front wheels.
41. Lower the vehicle on the lift.
42. Install the upper radiator hose (A) and lower radiator hose (B).

Fig. 55: Identifying Upper Radiator Hose And Lower Radiator Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. Install the heater hoses.

Fig. 56: Identifying Heater Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

44. Install the automatic transmission fluid (ATF) cooler hoses to the transmission, and secure the hoses with the clamps.

NOTE: Check the installation location of the clamps (see ATF COOLER HOSE REPLACEMENT).

Fig. 57: Identifying Automatic Transmission Fluid Cooler Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

45. Install the connector bracket to the front cylinder head.

10 x 1.25 mm
44 N·m (4.5 kgf·m, 33 lbf·ft)

Fig. 58: Identifying Connector Bracket Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

46. Install the bracket (A) to the rear cylinder head.

Fig. 59: Identifying Rear Cylinder Head Bracket Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

47. Install the power steering (P/S) pump outlet hose (A) with a new O-ring (B), and install the P/S pump inlet hose (C).

Fig. 60: Identifying Power Steering Pump Outlet Hose, O-Ring And P/S Pump Inlet Hose With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

48. Install the P/S hose clamp (D) to the cylinder head cover.
49. Install the drive belt (see **DRIVE BELT INSPECTION**).
50. Connect the powertrain control module (PCM) connectors (A) and engine wire harness connector (B), then install the harness clamps (C).

Fig. 61: Identifying Powertrain Control Module Connectors, Engine Wire Harness Connector And Harness Clamps

Courtesy of AMERICAN HONDA MOTOR CO., INC.

51. Install the PCM cover (A), then install the bracket (B).

Fig. 62: Identifying PCM Cover And Bracket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

52. Install the coolant reservoir to the bracket.
53. Install the alternator cable (A) to the main under-hood fuse box.

Fig. 63: Identifying Alternator Cable

Courtesy of AMERICAN HONDA MOTOR CO., INC.

54. Align the reference mark (A) on the steering joint and steering gearbox pinion shaft. Connect the steering joint (B) to the steering gearbox pinion shaft (C). Tighten the steering joint bolt.

Fig. 64: Identifying Align Reference Mark On Steering Joint And Steering Gearbox Pinion Shaft With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

55. Install the steering joint cover (D).
56. Install the steering wheel (see **STEERING WHEEL INSTALLATION**).
57. Install the brake booster vacuum hose-(A) and evaporative emission (EVAP) canister hose (B).

Fig. 65: Identifying Brake Booster Vacuum Hose And Evaporative Emission Canister Hose
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

58. Connect the EVAP canister purge valve connector (C).
59. Connect the fuel feed hose (A) (see **FUEL LINE/QUICK-CONNECT FITTING INSTALLATION**), then install the quick-connect fitting cover (B).

Fig. 66: Identifying Fuel Feed Hose And Quick-Connect Fitting Cover
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

60. Install the shift cable (see **SHIFT CABLE REPLACEMENT**).
61. Install the positive starter cable (A).

Fig. 67: Identifying Positive Starter Cable With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

62. Install the battery base (A), then install the harness clamps (B).

Fig. 68: Identifying Battery Base And Harness Clamps With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

63. Install the harness clamps (A) then install the main under-hood fuse box (B).

Fig. 69: Identifying Harness Clamps And Main Under-Hood Fuse Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

64. Install the air cleaner assembly (see **AIR CLEANER ELEMENT INSPECTION/ REPLACEMENT**).
65. Install the air intake duct (A), then install the breather pipe (B).

Fig. 70: Identifying Air Intake Duct And Breather Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

66. Install the engine cover.

Fig. 71: Identifying Engine Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

67. Install the bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
68. Install the service caps on the cowl cover.
69. Do the battery terminal reconnection procedure (See **RECONNECTION**).
70. Refill the engine with engine oil (see step 4 on **ENGINE OIL REPLACEMENT**).
71. Refill the transmission with ATF (see **ATF REPLACEMENT**).
72. Install the return hose to the power steering fluid reservoir. Refill the power steering system fluid (see **FLUID REPLACEMENT**).
73. Move the shift lever to each gear, and verify that the A/T gear position indicator follows the transmission range switch.
74. Check for fuel leaks. Turn the ignition switch ON (II) (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leaks at any point in the fuel line.
75. Refill the radiator with engine coolant, and bleed air from the cooling system with the heater valve open (see step 10 on **COOLANT REPLACEMENT**).
76. Do the crankshaft position (CKP) pattern clear/CKP pattern learn procedure (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).
77. Inspect the idle speed (see **IDLE SPEED INSPECTION**).
78. Inspect the ignition timing (see **IGNITION TIMING INSPECTION**).
79. Do the headlight initial position learning procedure (see **HEADLIGHT INITIAL POSITION LEARNING PROCEDURE**).

Courtesy of AMERICAN HONDA MOTOR CO., INC.

CONNECTING ROD AND CRANKSHAFT END PLAY INSPECTION

1. Remove the oil pump (see **REMOVAL**).
2. Remove the baffle plate (see step 10 on **CRANKSHAFT AND PISTON REMOVAL**).
3. Measure the connecting rod end play with a feeler gauge (A) between the connecting rod (B) and crankshaft (C).

Connecting Rod End Play

Standard (New): 0.15-0.35 mm (0.006-0.014 in.)

Service Limit: 0.45 mm (0.018 in.)

Fig. 5: Measuring Connecting Rod End Play

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the connecting rod end play is out-of-tolerance, install a new connecting rod and recheck. If it is still out-of-tolerance, replace the crankshaft (see **CRANKSHAFT AND PISTON REMOVAL**).
5. Push the crankshaft firmly away from the dial indicator, and zero the dial against the end of the crankshaft. Then pull the crankshaft firmly back toward the indicator; the dial reading should not exceed the service limit.

Crankshaft End Play

Standard (New): 0.10-0.35 mm (0.004-0.014 in.)

Service Limit: 0.45 mm (0.018 in.)

Fig. 6: Identifying Crankshaft End Play

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the end play is excessive, replace the thrust washers and recheck. If it is still out-of-tolerance, replace the crankshaft (see **CRANKSHAFT AND PISTON REMOVAL**).

CRANKSHAFT MAIN BEARING REPLACEMENT

MAIN BEARING CLEARANCE INSPECTION

1. Remove the main bearing caps and bearing halves (see **CRANKSHAFT AND PISTON REMOVAL**).
2. Clean each main journal and bearing half with a clean shop towel.
3. Place one strip of plastigage across each main journal.

NOTE: If the engine is still in the vehicle when you bolt the main cap down to check the clearance, the weight of the crankshaft and drive plate will flatten the plastigage further than just the torque on the cap bolt and give you an incorrect reading. For an accurate reading, support the crank with a jack under the counterweights, and check only one bearing at a time.

4. Reinstall the bearings and caps, then torque the bearing cap bolts to 74 N.m (7.5 kgf.m, 54 lbf.ft), and the bearing cap side bolts to 49 N.m (5.0 kgf.m, 36 lbf.ft) in the proper sequence (see step 22 on **CRANKSHAFT AND PISTON INSTALLATION**).

NOTE:

- Apply new engine oil to the bolt threads and flanges.
- Do not rotate the crankshaft during inspection.

5. Remove the cap and bearing half, and measure the widest part of the plastigage.

Main Bearing-to-Journal Oil Clearance

Standard (New): 0.019-0.045 mm (0.0007-0.0018 in.)

Service Limit: 0.050 mm (0.0020 in.)

Fig. 7: Measuring Widest Part Of Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the plastigage measures too wide or too narrow, remove the crankshaft, and remove the upper half of the bearing. Install a new, complete bearing with the same color code, and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.
7. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color listed above or below the current one), and check again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearings, replace the crankshaft and start over (see **CRANKSHAFT AND PISTON REMOVAL**).

MAIN BEARING SELECTION

Crankshaft Bore Code Location

Letters or bars have been stamped on the end of the block as a code for the size of each of the four main journal bores.

Use them, and the numbers stamped on the crankshaft (codes for main journal size), to choose the correct bearings. If the codes are indecipherable because of an accumulation of dirt and dust, do not scrub them with a wire brush or scraper. Clean them only with solvent or detergent.

Fig. 8: Locating And Identifying Crankshaft Bore Code (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 9: Locating And Identifying Crankshaft Bore Code (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Main Journal Code Locations (Numbers or Bars)

Fig. 10: Locating Main Journal Code (Numbers Or Bars)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CONNECTING ROD BEARING REPLACEMENT

ROD BEARING CLEARANCE INSPECTION

1. Remove the connecting rod cap and bearing half (see CRANKSHAFT AND PISTON REMOVAL).

2. Clean the crankshaft rod journal and bearing half with a clean shop towel.
3. Place a strip of plastigage across the rod journal.
4. Reinstall the bearing half and cap, and torque the bolts.

NOTE:

- Apply new engine oil to the bolt threads and flanges.
- Do not rotate the crankshaft during inspection.

Tightening Torque:

20 N.m (2.0 kgf.m, 14 lbf.ft) + 90 °

5. Remove the rod cap and bearing half and measure the widest part of the plastigage.

Connecting Rod Bearing-to-Journal Oil Clearance

Standard (New): 0.020-0.044 mm (0.0008-0.0017 in.)

Service Limit: 0.050 mm (0.0020 in.)

Fig. 11: Measuring Widest Part Of Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the plastigage measures too wide or too narrow, remove the upper half of the bearing, then install a new, complete bearing with the same color code, and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.
7. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color listed above or below the current one), and check clearance again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearings, replace the crankshaft and start over (see **CRANKSHAFT AND PISTON REMOVAL**).

ROD BEARING SELECTION

Each rod falls into one of four tolerance ranges, from 0 to 0.024 mm (0.0009 in.), in 0.006 mm (0.0002 in.) increments, depending on the size of its big end bore. It's then stamped with a number or bar (1,2,3, or 4/I, II,

III, or MM) indicating the range. You may find any combination of 1,2,3, or 4/I, II, III, or III I in any engine.

Normal Bore Size: 60.0 mm (2.36 in.)

Inspect the connecting rod for cracks and heat damage.

Connecting Rod Journal Code Locations

Numbers or bars have been stamped on the side of each connecting rod as a code for the size of the big end. Use them, and the letters or bars stamped on the crank (codes for rod journal size) to choose the correct bearings. If the codes are indecipherable because of an accumulation of dirt and dust, do not scrub them with a wire brush or scraper. Clean them only with solvent or detergent.

Fig. 12: Identifying And Locating Connecting Rod Journal Code (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Bearing Identification
Color code is on the edge of the bearing

	→ Larger big end bore			
	1 or I	2 or II	3 or III	4 or IIII
	→ Smaller bearing (Thicker)			
A or I	Pink	Pink/ Yellow	Yellow	Yellow/ Green
B or II	Pink/ Yellow	Yellow	Yellow/ Green	Green
C or III	Yellow	Yellow/ Green	Green	Green/ Brown
D or IIII	Yellow/ Green	Green	Green/ Brown	Brown
E or IIIII	Green	Green/ Brown	Brown	Brown/ Black
F or IIIII	Green/ Brown	Brown	Brown/ Black	Black

↓ Smaller rod journal ↓ Smaller bearing (Thicker)

NOTE: When using bearing halves of different colors, it does not matter which color is used in the top or bottom.

Fig. 13: Identifying And Locating Connecting Rod Journal Code (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting Rod Journal Code Locations (Letters or Bars)

Fig. 14: Locating Connecting Rod Journal Code (Letters Or Bars)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OIL PAN REMOVAL

1. If the engine is already out of the vehicle, go to step 6.
2. Raise the vehicle on the lift .
3. Drain the engine oil (see **ENGINE OIL REPLACEMENT**).

4. Remove the splash shield (see step 30 on **ENGINE REMOVAL**).
5. Remove exhaust pipe A (see step 35 on **ENGINE REMOVAL**).
6. Remove the rear warm up three way catalytic converter (rear WU-TWC) bracket.

Fig. 15: Identifying Rear Warm Up Three Way Catalytic Converter Bracket Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the torque converter cover (A) and the four bolts (B) securing the transmission.

Fig. 16: Identifying Torque Converter Cover And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the bolts securing the oil pan.
9. Using a flat blade screwdriver, separate the oil pan from the block in the places shown.

Fig. 17: Identifying Oil Pan Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the oil pan.

CRANKSHAFT AND PISTON REMOVAL

1. Remove the engine assembly (see ENGINE REMOVAL).
2. Remove the transmission (see TRANSMISSION REMOVAL).
3. Remove the drive plate.
4. Remove the cylinder heads (see CYLINDER HEAD REMOVAL).
5. Remove the crankshaft position (CKP) sensor (see CKP SENSOR REPLACEMENT).
6. Remove the timing belt drive pulley from the crankshaft.
7. Remove the oil pan (see OIL PAN REMOVAL).
8. Remove the engine block end cover.

Fig. 18: Identifying Drive Plate And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the rocker arm oil control solenoid/oil filter assembly.

Fig. 19: Identifying Rocker Arm Oil Control Solenoid/Oil Filter Assembly And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the oil screen (A), baffle plate (B), and oil pump(C).

Fig. 20: Identifying Oil Screen, Baffle Plate, And Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the connecting rod caps after setting the crank pin at bottom dead center (BDC) for each cylinder. Remove the piston/connecting rod assembly by pushing on the connecting rod. Take care not to damage the oil jets, crank pin, or cylinder with the connecting rod.

Fig. 21: Identifying Correct And Incorrect Position For Pushing Connecting Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the bearing from the cap. Keep all caps/ bearings in order.
13. Remove the upper bearing halves from the connecting rods, and set them aside with their respective caps.
14. After removing a piston/connecting rod assembly, reinstall the cap on the rod.
15. To avoid mix-up during reassembly, mark each piston/connecting rod assembly with its cylinder number.
16. Loosen the bearing cap bolts and bearing cap side bolts in sequence $\frac{1}{3}$ turn at a time; repeat the sequence until all bolts are loosened.

Fig. 22: Identifying Bearing Cap Bolts Loosening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the bearing cap bolts (A) and bearing cap side bolts (B), then remove the bearing cap (C).

Fig. 23: Identifying Bearing Cap Bolts And Bearing Cap Side Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Lift the crankshaft (A) out of the engine block, being careful not to damage the journals.

Fig. 24: Identifying Crankshaft

Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Reinstall the main caps and bearings on the engine block in the proper order.

CRANKSHAFT INSPECTION

OUT-OF-ROUND AND TAPER

1. Remove the crankshaft from the engine block (see **CRANKSHAFT AND PISTON REMOVAL**).
2. Clean the crankshaft oil passages with pipe cleaners or a suitable brush.
3. Check the keyway and threads.
4. Measure out-of-round at the middle of each rod and main journal in two places. The difference between measurements on each journal must not be more than the service limit.

Journal Out-of-Round

Standard (New): 0.005 mm (0.0002 in.) max.

Service Limit: 0.010 mm (0.0004 in.)

Fig. 25: Identifying Out-Of-Round At Middle Of Rod And Main Journal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure taper at the edges of each rod and main journal. The difference between measurements on each journal must not be more than the service limit.

Journal Taper

Standard (New): 0.005 mm (0.0002 in.) max.

Service Limit: 0.010 mm (0.0004 in.)

Straightness

6. Place the engine block on the surface plate.
7. Clean and install the bearings on the No. 1 and No. 4 journal of the engine block.
8. Lower the crankshaft into the engine block.
9. Measure the runout on all of the main journals. Rotate the crankshaft two complete revolutions. The difference between measurements on each journal must not be more than the service limit.

Crankshaft Total Runout

Standard (New): 0.025 mm (0.0010 in.) max.

Service Limit: 0.030 mm (0.0012 in.)

Fig. 26: Identifying Crankshaft Runout

Courtesy of AMERICAN HONDA MOTOR CO., INC.

BLOCK AND PISTON INSPECTION

1. Remove the piston from the engine block (see **CRANKSHAFT AND PISTON REMOVAL**).
2. Check the piston for distortion or cracks.
3. Measure the piston diameter at a point 16.0 mm (0.63 in.) from the bottom of the skirt.

Piston Diameter

Standard (New): 89.983-89.996 mm (3.5426-3.5431 in.)

Fig. 27: Identifying Piston Diameter

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure wear and taper in direction X and Y at three levels in each cylinder as shown. If the measurements in any cylinder are beyond the service limit, replace the engine block

Cylinder Bore Size

Standard (New): 90.000-90.015 mm (3.5433-3.5439 in.)

Fig. 28: Identifying Cylinder Bore Size

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check the top of the engine block for warpage. Measure along the edges and across the center as shown.:

Engine Block Warpage

Standard (New): 0.07 mm (0.003 in.) max.

Fig. 29: Identifying Engine Block Warpage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Calculate the difference between cylinder bore diameter and piston diameter. If the clearance is near or exceeds the service limit, inspect the piston and cylinder bore for excessive wear.

Piston-to-Cylinder Bore Clearance

Standard (New): 0.004-0.032 mm (0.0002-0.0013 in.)

Service Limit: 0.08 mm (0.003 in.)

Fig. 30: Identifying Piston-To-Cylinder Bore Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PISTON, PIN, AND CONNECTING ROD REPLACEMENT

DISASSEMBLY

1. Remove the piston from the engine block (see **CRANKSHAFT AND PISTON REMOVAL**).
2. Apply new engine oil to the piston pin snap rings (A) and turn them in the ring grooves until the end gaps are lined up with the cutouts in the piston pin bores (B).

NOTE: Take care not to damage the ring grooves.

Fig. 31: Identifying Snap Rings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove snap rings (A) from both sides of the piston. Start at the cutout in the piston pin bore. Remove the snap rings carefully so they do not go flying or get lost. Wear eye protection.

Fig. 32: Identifying Snap Rings

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Heat the piston and connecting rod assembly to about 158°F (70°C), then remove the piston pin.

Fig. 33: Heating Piston And Connecting Rod Assembly

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Inspection

NOTE: Inspect the piston, piston pin, and connecting rod when they are at room temperature.

1. Measure the diameter of the piston pin.

Piston Pin Diameter

Standard (New): 21.962-21.965 mm (0.8646-0.8648 in.)

Service Limit: 21.954 mm (0.8643 in.)

Fig. 34: Identifying Diameter Of Piston Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Zero the dial indicator to the piston pin diameter.

Fig. 35: Identifying Piston Pin Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check the difference between the piston pin diameter and piston pin hole diameter on the piston.

Piston Pin-to-Piston Clearance

Standard (New): -0.0050 to +0.0010 mm (-0.00020 to +0.00004 in.)

Service Limit: 0.004 mm (0.0002 in.)

Fig. 36: Identifying Difference Between Piston Pin Diameter And Piston Pin Hole Diameter On Piston

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the piston pin-to-connecting rod clearance.

Piston Pin-to-Connecting Rod Clearance

Standard (New): 0.005-0.014 mm (0.0002-0.0006 in.)

Service Limit: 0.019 mm (0.0007 in.)

Fig. 37: Identifying Piston Pin-To-Connecting Rod Clearance

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

1. Install a piston pin snap ring (A) only on one side.

Fig. 38: Identifying Piston Pin Snap Ring

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Coat the piston pin bore in the piston, the bore in the connecting rod, and the piston pin with new engine oil.
3. Heat the piston to about 158°F (70°C).

Fig. 39: Heating Piston

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Assemble the piston (A) and connecting rod (B) with the embossed marks (C) on the same side. Install the piston pin (D).

NOTE: Apply new engine oil to the piston pin.

Fig. 40: Identifying Piston And Connecting Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the remaining snap ring.

PISTON RING REPLACEMENT

1. Remove the piston from the engine block (see **CRANKSHAFT AND PISTON REMOVAL**).
2. Using a ring expander (A), remove the old piston rings (B).

Fig. 41: Identifying Piston Rings

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Clean all the ring grooves thoroughly with a squared-off broken ring, or a ring groove cleaner with a blade that fits the piston grooves. File down the blade, if necessary. The top ring and second ring grooves are 1.2 mm (0.05 in.) wide, and the oil ring groove is 2.8 mm (0.11 in.) wide. Do not use a wire brush to clean the ring grooves, or cut the ring grooves deeper with the cleaning tool.

NOTE: If the piston is to be separated from the connecting rod, do not install new rings yet.

4. Using a piston, push a new ring (A) into the cylinder bore 15-20 mm (0.6-0.8 in.) from the bottom.

Fig. 42: Identifying Ring Into Cylinder Bore

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the piston ring end-gap (B) with a feeler gauge:

2008 Acura MDX

2007-09 ENGINE Engine Block - MDX

- If the gap is too small, check to see if you have the proper rings for your engine.
- If the gap is too large, recheck the cylinder bore diameter against the wear limits (see step 4 on **BLOCK AND PISTON INSPECTION**).

Piston Ring End-Gap

Top Ring:

Standard (New): 0.30-0.40 Mm (0.012-0.016 In.)

Service Limit: 0.60 Mm (0.024 In.)

Second Ring:

Standard (New): 0.40-0.55 Mm (0.016-0.022 In.)

Service Limit: 0.70 Mm (0.028 In.)

Oil Ring:

Standard (New): 0.20-0.70 Mm (0.008-0.028 In.)

Service Limit: 0.80 Mm (0.031 In.)

6. Install the rings as shown. The top ring (A) has a 1E mark and the second ring (B) has a 2E mark. The manufacturing marks (c) must face upward.

**Piston Ring Dimensions:**

Top Ring (Standard)
A: 3.1 mm (0.12 in.)
B: 1.2 mm (0.05 in.)

Second Ring (Standard)
A: 3.4 mm (0.13 in.)
B: 1.2 mm (0.05 in.)

Fig. 43: Identifying Top Ring And Second Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. After installing a new set of rings, measure the ring-to-groove clearance:

Top Ring Clearance

Standard (New): 0.055-0.085 mm (0.0022-0.0033 in.)

Service Limit: 0.15 mm (0.006 in.)

Second Ring Clearance

Standard (New): 0.030-0.060 mm (0.0012-0.0024 in.)

Service Limit: 0.13 mm (0.005 in.)

Fig. 44: Measuring Ring-To-Groove Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rotate the rings in their grooves to make sure they do not bind.
9. Position the ring end gaps as shown:

Fig. 45: Identifying Ring End Gaps Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CRANKSHAFT AND PISTON INSTALLATION

Special Tools Required

- Handle driver 07749-0010000
 - Driver attachment, 106 mm 070AD-RCAA200
1. Check the connecting rod bearing clearance with plastigage (see **CONNECTING ROD BEARING REPLACEMENT**).
 2. Check the main bearing clearance with plastigage (see **CRANKSHAFT MAIN BEARING REPLACEMENT**).
 3. Install the bearing halves in the engine block and connecting rods.

4. Apply new engine oil to the inside of the main bearings and rod bearings.
5. Lower the crankshaft (A) into the engine block.

Fig. 46: Identifying Lower Crankshaft Into Engine Block
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Apply new engine oil to the side with the thrust washer groove. Install the thrust washers (A) in the No. 3 journal.

Fig. 47: Identifying Thrust Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the bearings (A) and bearing caps (B) with the arrow (C) facing the timing belt end of the engine.

Fig. 48: Identifying Bearings And Bearing Caps Bolts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Apply new engine oil to the bolt threads and flanges, then loosely install the bearing cap bolts (D) and bearing cap side bolts (E).
9. Set the crankshaft to bottom dead center (BDC) for the cylinder you are installing the piston in.
10. Apply new engine oil to the piston, inside of the ring compressor, and the cylinder bore.
11. Attach the ring compressor to the piston/ connecting rod assembly, and check that the bearing is securely in place.
12. Position the piston/connecting rod assembly with the arrow (A) facing the timing belt side of the engine.

Fig. 49: Identifying Piston/Connecting Rod Assembly Mark

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Position the piston/connecting rod assembly in the cylinder, and tap it in using the wooden handle of a hammer (A). Maintain downward force on the ring compressor (B) to prevent the rings from expanding before entering the cylinder bore.

Fig. 50: Identifying Hammer In Cylinder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Stop after the ring compressor pops free, and check the connecting rod-to-crank journal alignment before pushing the piston into place.
15. Measure the diameter of each connecting rod bolt at point A and point B.

Fig. 51: Identifying Diameter Of Connecting Rod Bolt
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Calculate the difference in diameter between point A and point B.

Point A-Point B = Difference in Diameter

Difference in Diameter

Specification: 0-0.1 mm (0-0.004 in.)

17. If the difference in diameter is out of tolerance, replace the connecting rod bolt.
18. Line up the mark (A) on the connecting rod and cap, then install the cap.

Fig. 52: Identifying Lining Up Mark On Connecting Rod And Cap

Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Apply new engine oil to the bolt threads and flanges. Torque the bolts (B) to 20 N.m (2.0 kgf.m, 14 lbf.ft).
20. Mark the connecting rod (A) and bolt head (B) as shown.

Fig. 53: Identifying Marking Of Connecting Rod And Bolt Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Tighten the bolt until the mark on the bolt head lines up with the mark on the connecting rod (turn the bolt 90 °).

NOTE: Remove the connecting rod bolt if you tightened it beyond the specified angle, and go back to step 15 of the procedure. Do not loosen it back to the specified angle.

22. Tighten the bearing cap bolts, and then the bearing cap side bolts to the specified torque in the sequence as shown. Repeat the torque sequence again to measure the bolts are properly torqued.

Fig. 54: Identifying Bearing Cap Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Apply a light coat of multipurpose grease to the crankshaft and to the lip of the seal.
24. Drive the new crankshaft oil seal until the driver attachment bottoms on the engine block end cover.

Fig. 55: Driving Crankshaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Remove all of the old liquid gasket from the engine block end cover mating surfaces, bolts, and bolt holes.
26. Clean and dry the engine block end cover mating surfaces.
27. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the engine block end cover. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.
- If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.

Fig. 56: Applying Liquid Gasket To Engine Block Mating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Install the dowel pins (A), new O-ring (B), and the engine block end cover (C) on the engine block.

Fig. 57: Identifying Dowel Pins, O-Ring And Engine Block End Cover With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Clean the excess grease off the crankshaft, and check the seal for distortion.
30. Install a new crankshaft oil seal in the oil pump (see step 2 in **OIL PUMP OVERHAUL**).
31. Remove all of the old liquid gasket from the oil pump mating surfaces, bolts, and bolt holes.
32. Clean and dry the oil pump mating surfaces.
33. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the oil pump. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.
- If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.

Fig. 58: Applying Liquid Gasket To Engine Block Mating Surface Of Oil Pump

Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Grease the lip of the oil seal, and apply oil to the new O-ring (A).

Fig. 59: Identifying Lip Of Oil Seal And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Install the dowel pins (B), then align the inner rotor with the crankshaft, and install the oil pump (C).
36. Clean the excess grease off the crankshaft, and check the seal for distortion.
37. Install the baffle plate (D), then install the oil screen (E) with the new O-ring (F).
38. Install the rocker arm oil control solenoid/oil filter assembly (A), with a new rocker arm oil control solenoid filter (B).

Fig. 60: Identifying Rocker Arm Oil Control Solenoid/Oil Filter Assembly With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Install the oil pan (see [OIL PAN INSTALLATION](#)).
40. Install the crankshaft position (CKP) sensor (see [CKP SENSOR REPLACEMENT](#)).

41. Install the cylinder heads (see **CYLINDER HEAD INSTALLATION**).
42. Install the drive plate.
43. Install the transmission (see **TRANSMISSION INSTALLATION**).
44. Install the engine assembly (see **ENGINE INSTALLATION**).

NOTE: When any crankshaft or connecting rod bearing is replaced, after assembly it is necessary to run the engine at idling speed until it reaches normal operating temperature, then continue to run it for about 15 minutes.

OIL PAN INSTALLATION

1. Remove all of the old liquid gasket from the oil pan mating surfaces, bolts, and bolt holes.
2. Clean and dry the oil pan mating surfaces.
3. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0003, or 08718-0009. evenly to the oil pan mating surface of the engine block. Install the component within 5 minutes of applying the liquid gasket.

- NOTE:**
- If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.
 - If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.

Fig. 61: Applying Liquid Gasket Oil Pan Mating Surface Of Engine Block

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the oil pan on the engine block.
5. Tighten the bolts in three steps. In the final step, tighten all bolts, in sequence, to 12 N.m (1.2 kgf.m, 8.8 lbf.ft).

NOTE: After assembly, wait at least 30 minutes to allow liquid gasket to cure before filling the engine with oil.

Fig. 62: Identifying Tightening Sequence Of Oil Pan Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tighten the four bolts (A) securing the transmission, then install the torque converter covers (B).

Fig. 63: Identifying Torque Converter Cover And Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the rear warm up three way catalytic converter (rear WU-TWC) bracket.

8 x 1.25 mm
22 N·m
(2.2 kgf·m, 16 lbf·ft)

Fig. 64: Identifying Three Way Catalytic Converter Bracket Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If the engine is still in the vehicle, do the following steps.
9. Install exhaust pipe A using new gaskets and new self-locking nuts (see step 36 on **ENGINE INSTALLATION**).
10. Install the splash shield (see step 39 on **ENGINE INSTALLATION**).
11. Lower the vehicle on the lift.
12. Refill the engine with engine oil (see step 4 on **ENGINE OIL REPLACEMENT**).

PULLEY END CRANKSHAFT OIL SEAL INSTALLATION - IN CAR

Special Tools Required

Oil seal driver, 64 mm 070AD-RCAA100

1. Remove the crankshaft position (CKP) sensor, timing belt, and timing belt drive pulley (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).
2. Remove the pulley end crankshaft oil seal.
3. Clean and dry the crankshaft oil seal housing.
4. Apply a light coat of multipurpose grease to the crankshaft and to the lip of the seal.
5. Using the seal driver, drive in the crankshaft oil seal until the driver bottoms against the oil pump. When the seal is in place, clean any excess grease off the crankshaft, and check that the oil seal lip is not distorted.

Fig. 65: Identifying Oil Seal Driver

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the timing belt drive pulley, timing belt, and CKP sensor (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).

TRANSMISSION END CRANKSHAFT OIL SEAL INSTALLATION - IN CAR

Special Tools Required

- Handle driver 07749-0010000
 - Driver attachment, 106 mm 070AD-RCAA200
1. Remove the transmission (see **TRANSMISSION REMOVAL**) and the drive plate.
 2. Remove the transmission end crankshaft oil seal.
 3. Clean and dry the crankshaft oil seal housing.
 4. Apply a light coat of multipurpose grease to the crankshaft and to the lip of the seal.
 5. Using the special tools, drive in the crankshaft oil seal until the driver attachment bottoms against the engine block end cover- Align the hole in the driver attachment with the pin on the crankshaft.

Fig. 66: Driving Crankshaft Oil Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Clean any excess grease off the crankshaft, and check that the oil seal lip is not distorted.
7. Install the drive plate, and the transmission (see TRANSMISSION INSTALLATION).

SEALING BOLT INSTALLATION

NOTE: When installing the sealing bolt (A), always use a new washer.

Fig. 67: Identifying Sealing Bolt With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING CHART

Symptom	Diagnostic procedure	Also check for
	1. Verify the engine oil filler cap, oil drain bolt, and oil filter are tight. 2. Check for oil leaks. 3. Check for worn valve guide(s) (see <u>VALVE STEM-TO-GUIDE CLEARANCE INSPECTION</u>) or worn valve stem seal(s) (see	

2008 Acura MDX

2007-09 ENGINE Engine Lubrication - MDX

Excessive engine oil consumption	<u>VALVE, SPRING, AND VALVE SEAL REMOVAL</u>). 4. Check for damaged or worn piston ring(s) (see <u>PISTON RING REPLACEMENT</u>). 5. Check for damaged or worn engine internal parts (cylinder wall, pistons, etc.) (see <u>BLOCK AND PISTON INSPECTION</u>).	
Low oil pressure indicator does not come on with the ignition switch ON (II)	1. Do the low oil pressure indicator circuit troubleshooting (Open) (see <u>LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (OPEN)</u>). 2. Test the oil pressure switch (see <u>OIL PRESSURE SWITCH TEST</u>).	An open in the wire between the powertrain control module (PCM) and the oil pressure switch
Low oil pressure indicator stays on	1. Check the engine oil level. 2. Do the low oil pressure indicator circuit troubleshooting (Short) (see <u>LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (SHORT)</u>). 3. Test the oil pressure switch (see <u>OIL PRESSURE SWITCH TEST</u>). 4. Check the engine oil pressure (see <u>OIL PRESSURE TEST</u>). 5. Check the oil filter for clogging. 6. Check the oil screen for clogging. 7. Check the relief valve (see <u>EXPLODED VIEW</u>). 8. Test the oil pump (see <u>INSPECTION</u>).	A wire shorted to ground between the powertrain control module (PCM) and the oil pressure switch

LOW OIL PRESSURE INDICATOR CIRCUIT DIAGRAM

2008 Acura MDX

2007-09 ENGINE Engine Lubrication - MDX

Fig. 3: Low Oil Pressure Indicator Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (OPEN)

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose and repair the cause before continuing with this test.
5. Turn the ignition switch to ON (II), select PGM-FI, and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

Is ON indicated?

YES - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

NO - Go to step 6.

6. Check the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

Is the oil pressure switch OK?

YES - Go to step 7.

NO - Replace the oil pressure switch (see **OIL PRESSURE SWITCH REPLACEMENT**).

7. Turn the ignition switch to ON (II), and jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the PCM from damage.

8. Disconnect PCM connector C (49P) and the oil pressure switch connector.
9. Check for continuity between PCM connector terminal C45 and the oil pressure switch connector.

Fig. 4: Identifying Continuity Between PCM Connector Terminal C45 And Oil Pressure Switch Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).B

NO - Repair open in the wire between the oil pressure switch and the PCM.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (SHORT)

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose and repair the cause before continuing with this test.
5. Start the engine, select PGM-FI, and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

Is OFF indicated?

YES - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the oil pressure switch connector.
8. Start the engine and check the OIL PRESSURE SWITCH in the DATA LIST with the HDS.

Is OFF indicated?

YES - Go to step 9.

NO - Go to step 10.

9. Check the oil pressure switch (see **OIL PRESSURE SWITCH TEST**).

Is the oil pressure switch OK?

YES - Do the oil pressure test (see **OIL PRESSURE TEST**).

NO - Replace the oil pressure switch (see **OIL PRESSURE SWITCH REPLACEMENT**).

10. Turn the ignition switch to ON (II), and jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the PCM from damage.

11. Disconnect PCM connector C (49P) and the oil pressure switch connector.
12. Check for continuity between the oil pressure switch connector and body ground.

OIL PRESSURE SWITCH CONNECTOR

Terminal side of female terminal

Fig. 5: Identifying Continuity Between Oil Pressure Switch Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the oil pressure switch and the PCM.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**) or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

OIL PRESSURE SWITCH TEST

1. Disconnect the oil pressure switch connector (A) from the engine oil pressure switch (B).

Fig. 6: Identifying Oil Pressure Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between the positive terminal (C) and the engine (ground). There should be no continuity with the engine stopped. There should be continuity with the engine running.

OIL PRESSURE SWITCH REPLACEMENT

1. Disconnect the oil pressure switch connector, then remove the oil pressure switch.

Fig. 7: Identifying Oil Pressure Switch With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove any old liquid gasket from the switch and switch mounting hole.
3. Apply a very small amount of liquid gasket to the oil pressure switch threads, then install the oil pressure switch.

NOTE: Using too much liquid gasket may cause liquid gasket to enter the oil passage or the end of the new oil pressure switch.

OIL PRESSURE TEST

Special Tools Required

- Pressure gauge adapter 07NAJ-P07010A
- Oil pressure hose 07ZAJ-S5AA200
- A/T pressure hose 07406-0020201
- A/T low pressure gauge w/panel 07406-0070301
- A/T pressure hose, 2,210 mm 07MAJ-PY4011A
- A/T pressure hose adapter 07MAJ-PY40120

If the low oil pressure indicator stays on with the engine running, check the engine oil level. If the oil level is correct:

1. Remove the oil pressure switch (A)..

Fig. 8: Identifying Oil Pressure Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the oil pressure hose, the A/T pressure hose, the A/T low pressure gauge w/panel, the A/T pressure hose, 2,210 mm and the A/T pressure hose adapter.
3. Install the oil pressure switch in the pressure gauge adapter (B).
4. Start the engine. Shut it off immediately if the gauge registers no oil pressure. Repair the problem before continuing.

5. Allow the engine to reach operating temperature (fan comes on at least twice). The pressure should be:

Engine Oil Temperature: 176°F (80°C)

Engine Oil Pressure:

At Idle: 70 kPa (0.7 kgf/cm² , 10 psi) min.

At 3,000 rpm: 490 kPa (5.0 kgf/cm² , 71 psi) min.

6. If oil pressure is out of specifications, inspect these items:
 - Inspect the oil pressure relief valve (see **EXPLODED VIEW**).
 - Check the oil screen for clogging.
 - Inspect the oil pump (see **INSPECTION**).

ENGINE OIL REPLACEMENT

1. Warm up the engine.
2. Remove the drain bolt (A), and drain the engine oil.

Fig. 9: Identifying Drain Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the drain bolt with a new washer (B).
4. Refill with the recommended oil (see **LUBRICANTS AND FLUIDS**).

Capacity At Oil Change: 4.0 L (4.2 US qt)

At Oil Change including Filter: 4.3 L (4.5 US qt)

After Engine Overhaul: 5.0 L (5.3 US qt)

Fig. 10: Refilling With Recommended Oil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
6. Turn the ignition switch ON (II).
7. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). If it doesn't communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
8. Select BODY ELECTRICAL with the HDS.
9. Select ADJUSTMENT in the GAUGES MENU with the HDS.
10. Select RESET in the MAINTENANCE MINDER with the HDS.
11. Select RESETTING THE ENGINE OIL LIFE with the HDS.

NOTE: If you changed the ATF at the same time with the engine oil, select **RESETTING THE ENGINE OIL LIFE AND ATF** with the HDS instead.

12. Run the engine for more than 3 minutes, then check for oil leaks.
13. Reset the multi-information display (see **RESETTING THE MAINTENANCE INFORMATION DISPLAY**).

ENGINE OIL FILTER REPLACEMENT

Special Tools Required

Oil filter wrench 07AAA-PLCA100

1. Remove the oil filter with the oil filter wrench.
2. Inspect the filter to make sure the rubber seal is not stuck to the oil filter seating surface of the engine.
3. Inspect the threads (A) and rubber seal (B) on the new filter. Clean the seat on the engine block, then apply a light coat of new engine oil to the filter rubber seal. Use only filters with a built-in bypass system.

Fig. 11: Identifying Threads And Rubber Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the oil filter by hand.
5. After the rubber seal seats/tighten the oil filter clockwise with the oil filter wrench.

Tighten: 3/4 Turn Clockwise

Tightening Torque: 12 N.m (1.2 kgf.m, 8.8 lbf.ft)

Fig. 12: Identifying Oil Filter With Oil Filter Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If four numbers or triangle marks (1 to 4 or ? to ???) are printed around the outside of the filter, you can use the following procedure to tighten the filter.
 - Spin the filter on until its seal lightly seats against the block, and note which number or mark is at the bottom.
 - Tighten the filter by turning it clockwise three numbers or marks from the one you noted. For example, if ? mark is at the bottom when the seal is lightly seated, tighten the filter until the triangle

mark(s) ???? comes around to the bottom.

Fig. 13: Identifying Triangle Marks Around Outside Of Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. After installation, fill the engine with oil up to the specified level, run the engine for more than 3 minutes, then check for oil leakage.

OIL FILTER FEED PIPE REPLACEMENT

1. Remove the oil filter (see ENGINE OIL FILTER REPLACEMENT).
2. Remove the oil filter feed pipe.

Fig. 14: Identifying Oil Filter Feed Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install two 20 x 1.5 mm nuts (A) onto the new oil filter feed pipe, and hold one nut with a wrench, then tighten the other nut.

Fig. 15: Identifying Nuts Onto New Oil Filter Feed Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the oil filter feed pipe to 49 N.m (5.0 kgf.m, 36 lbf.ft), then remove the nuts from the oil filter feed pipe.

OIL JET REPLACEMENT

1. Remove the crankshaft from the engine block (see **CRANKSHAFT AND PISTON REMOVAL**).
2. Remove the oil jet bolt (A), then remove and discard the oil jet (B).

Fig. 16: Identifying Oil Jet Bolt And Oil Jet With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully install the new oil jet and tighten the oil jet bolt.
4. Install the crankshaft (see **CRANKSHAFT AND PISTON INSTALLATION**).

OIL JET BOLT INSPECTION

1. Remove the oil jet bolt (see **OIL JET REPLACEMENT**).
2. Inspect the oil jet bolt as follows.
 - Make sure that a 0.6 mm (0.02 in.) diameter drill will go through the oil intake (0.7 mm (0.03 in.) diameter). Make sure the check ball (A) moves smoothly and has a stroke of about 4.0 mm (0.16 in.).
 - Check the oil jet bolt operation with an air nozzle. It should take at least 120 kPa (1.2 kgf/cm, 17 psi) to unseat the check ball.

Fig. 17: Identifying Oil Jet Bolt

Courtesy of AMERICAN HONDA MOTOR CO., INC.

OIL PUMP OVERHAUL

EXPLODED VIEW

Fig. 18: Exploded View Of Oil Pump Overhaul With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Oil seal driver, 64 mm 070AD-RCAA100
- Engine support hanger A and Reds AAR-T-12566 *
- Engine hanger adapter set VSB02C000031 *

* These special tools are available through the Honda Tool and Equipment program, 1-888-424-6857.

REMOVAL

1. Remove the bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
2. Remove the drive belt (see **DRIVE BELT INSPECTION**).

3. Remove the power steering (P/S) pump and P/S line bracket (see step 6 **CYLINDER HEAD REMOVAL**).
4. Remove the service caps (A) for the front damper flange nuts from the cowl cover (B). Position the engine hanger adapters (VSB02C000031) with the FRONT mark facing forward over the damper flange nuts.

Fig. 19: Identifying Engine Hanger Adapters (VSB02C000031)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the engine support hanger (AAR-T-12566) to the vehicle, and attach the hook (A) to the engine hanger (B). Tighten the wing nut (C) by hand, to lift and support the engine/transmission.

Fig. 20: Identifying Engine Support Hanger
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the timing belt (see **TIMING BELT REMOVAL**).
7. Remove the crankshaft position (CKP) sensor (see **CKP SENSOR REPLACEMENT**).

8. Remove the rocker arm oil control solenoid/oil filter assembly (see step 9 **CRANKSHAFT AND PISTON REMOVAL**).
9. Remove the oil pan (see **OIL PAN REMOVAL**).
10. Remove the oil screen (A), then remove the oil pump(B).

Fig. 21: Identifying Oil Screen And Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Remove the screws from the pump housing, then separate the housing and cover.
2. Check the inner-to-outer rotor radial clearance between the inner rotor (A) and outer rotor (B). If the inner-to-outer rotor clearance exceeds the service limit, replace the oil pump assembly.

Inner Rotor-to-Outer Rotor Radial Clearance

Standard (New): 0.04-0.16 mm

(0.002-0.006 in.)

Service Limit: 0.20 mm (0.008 in.)

Fig. 22: Identifying Inner-To-Outer Rotor Radial Clearance Between Inner Rotor And Outer Rotor

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check the housing-to-rotor axial clearance between the rotors (A) and pump housing (B). If the housing-to-rotor axial clearance exceeds the service limit, replace the oil pump assembly.

Housing-to-Rotor Axial Clearance

Standard (New): 0.02-0.07 mm (0.001-0.003 in.)

Service Limit: 0.12 mm (0.005 in.)

Fig. 23: Identifying Housing-To-Rotor Axial Clearance Between Rotors And Pump Housing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the housing-to-outer rotor radial clearance between the outer rotor (A) and pump housing (B). If the housing-to-outer rotor radial clearance exceeds the service limit, replace the oil pump assembly.

Housing-to-Outer Rotor Radial Clearance

Standard (New): 0.10-0.19 mm (0.004-0.007 in.)

Service Limit: 0.20 mm (0.008 in.)

Fig. 24: Identifying Housing-To-Outer Rotor Radial Clearance Between Outer Rotor And Pump Housing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Inspect both rotors and pump housing for scoring or other damage. Replace the parts, if necessary.
6. Apply liquid thread lock to the pump housing screws, then install the oil pump cover.
7. Check that the oil pump turns freely.

INSTALLATION

1. Remove the old oil seal from the oil pump.
2. Gently tap in the new oil seal until the oil seal driver bottoms on the pump.

Fig. 25: Tapping In New Oil Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove all of the old liquid gasket from the oil pump mating surfaces, bolts, and bolt holes.
4. Clean and dry the oil pump mating surfaces.
5. Apply liquid gasket, P/N 08717-0004, 08718-0001, 08718-0003, or 08718-0009, evenly to the engine block mating surface of the oil pump. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.
- If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply new liquid gasket.

Fig. 26: Identifying Applying Liquid Gasket Area Along Broken Line
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Grease the lip of the oil seal, and apply oil to the new O-ring (A).

Fig. 27: Identifying O-Rings, Dowel Pins, Oil Pump And Oil Screen With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the dowel pins (B), then align the inner rotor with the crankshaft, and install the oil pump (C).
8. Clean the excess grease off the crankshaft, and check the seal for distortion.
9. Install the oil screen (D) with new O-ring (E).
10. Install the rocker arm oil control solenoid/oil filter assembly, with a new rocker arm oil control solenoid

2008 Acura MDX

2007-09 ENGINE Engine Lubrication - MDX

filter (see step 38 **CRANKSHAFT AND PISTON INSTALLATION**).

11. Install the oil pan (see **OIL PAN INSTALLATION**).
12. Install the crankshaft position (CKP) sensor (see **CKP SENSOR REPLACEMENT**).
13. Install the timing belt (see **TIMING BELT INSTALLATION**).
14. Remove the engine support hanger, and engine hanger adapters.
15. Install the service caps on the cowl cover.
16. Install the power steering (P/S) pump and P/S line bracket (see step 27 **CYLINDER HEAD INSTALLATION**).
17. Install the drive belt (see **DRIVE BELT INSPECTION**).
18. Install the bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).

TROUBLESHOOTING

Special Tools Required

Vacuum pump/gauge, 0-30 in.Hg Snap-on YA4000A or equivalent, commercially available

NOTE: Check the vacuum hoses and lines for damage and proper connections before troubleshooting.

Follow this procedure if the engine vibrates excessively when idling.

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the PCM. If it doesn't communicate troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Start the engine, and let it idle.
5. Raise the engine speed from idling to 2,000 rpm.
6. Check the MOUNT CTRL SOL in the PGM-FI DATA LIST with the Honda Diagnostic System (HDS).

Is ON indicated at idling and OFF indicated at 2,000 rpm?

YES - Go to step 7.

NO - Update the powertrain control module (PCM) if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**).

7. Disconnect the engine mount control solenoid valve 2P connector from the engine mount control solenoid valve.
8. Turn the ignition switch to ON (II).
9. Measure the voltage between engine mount control solenoid valve 2P connector terminal No. 2 and body ground.

**ENGINE MOUNT CONTROL
SOLENOID VALVE 2P CONNECTOR**

Wire side of female terminals

Fig. 3: Identifying Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminal No. 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 10.

NO - Repair open in the wire between engine mount control solenoid valve 2P connector terminal No. 2

and No. 18 (10 A) fuse in the under-dash fuse/relay box.

10. Measure the voltage between engine mount control solenoid valve 2P connector terminals No. 1 and No. 2, with the engine at idle.

**ENGINE MOUNT CONTROL
SOLENOID VALVE 2P CONNECTOR**

Wire side of female terminals

Fig. 4: Identifying Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminals No. 1 And No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 11.

NO - Repair open in the wire between PCM (A12) and the engine mount control solenoid valve 2P connector. If the wire is OK, update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), and recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**).

11. Raise the engine speed above 1,000 rpm.
12. Measure the voltage between engine mount control solenoid valve 2P connector terminals No. 1 and No. 2.

**ENGINE MOUNT CONTROL
SOLENOID VALVE 2P CONNECTOR**

Wire side of female terminals

Fig. 5: Identifying Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminals No. 1 And No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair short to body ground in the wire between PCM (A12) and the engine mount control solenoid valve. If the wire is OK, update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), and recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**).

NO - Go to step 13.

13. Disconnect the vacuum hose (A) that is closest to the solenoid connector from the engine mount control solenoid valve (B), and connect a commercially available vacuum pump/gauge, 0-30 in.Hg, to the hose. Apply about 20 in.Hg of vacuum, and wait for 20 seconds.

Fig. 6: Identifying Engine Mount Control Solenoid Valve And Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Do the engine mount hold vacuum?

YES - Go to step 14.

NO - Either the vacuum hose or one of the engine mount has a vacuum leak. Repair as needed.

14. Release the vacuum, then apply vacuum again.

Is there a noticeable change in idle smoothness with and without vacuum applied?

YES - Go to step 15.

NO - Replace the front engine mount.

15. Connect a commercially available vacuum pump/ gauge, 0-30 in.Hg, to the engine mount control solenoid valve (A) that is closest to the solenoid connector.

Fig. 7: Identifying Engine Mount Control Solenoid Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there manifold vacuum at idle, and a decrease in manifold vacuum when you raise the engine speed above 1,000 rpm?

YES - The system is OK.

NO - Replace the engine mount control solenoid valve.

2007-09 ENGINE PERFORMANCE

EVAP System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying EVAP System Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC TROUBLESHOOTING

DTC P0443: EVAP CANISTER PURGE VALVE CIRCUIT MALFUNCTION**Special Tools Required**

Vacuum pump/gauge, 0-30 in.Hg, Snap-on YA4000A or equivalent, commercially available

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0443 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EVAP canister purge valve and the PCM.

5. Turn the ignition switch OFF, and allow the engine to cool below 140°F (60°).
6. Disconnect the vacuum hose (A) from the purge joint (B) in the engine compartment, and connect a vacuum pump/gauge, 0-30 in.Hg, to the hose.

Fig. 2: Identifying Vacuum Hose From Purge Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Start the engine, and let it idle.

Is there vacuum?

YES - Go to step 8.

NO - Go to step 14.

8. Turn the ignition switch OFF.
9. Disconnect the EVAP canister purge valve 2P connector.
10. Check for continuity between EVAP canister purge valve 2P connector terminal No. 2 and body ground.

EVAP CANISTER PURGE VALVE 2P CONNECTOR

Wire side of female terminals

Fig. 3: Identifying Continuity Between EVAP Canister Purge Valve 2P Connector Terminal No. 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 11.

NO - Go to step 23.

11. Jump the SCS line with the HDS.
12. Disconnect PCM connector C (49P).
13. Check for continuity between EVAP canister purge valve 2P connector terminal No. 2 and body ground.

EVAP CANISTER PURGE VALVE 2P CONNECTOR

Wire side of female terminals

Fig. 4: Identifying Continuity Between EVAP Canister Purge Valve 2P Connector Terminal No. 2

And Body Ground**Courtesy of AMERICAN HONDA MOTOR CO., INC.***Is there continuity ?*

YES - Repair short in the wire between the EVAP canister purge valve and the PCM (C40), then go to step 24.

NO - Go to step 30.

14. Turn the ignition switch OFF.
15. Disconnect the EVAP canister purge valve 2P connector.
16. Turn the ignition switch ON (II).
17. Measure voltage between EVAP canister purge valve 2P connector terminal No. 1 and body ground.

EVAP CANISTER PURGE VALVE 2P CONNECTOR

Wire side of female terminals

Fig. 5: Identifying Voltage Between EVAP Canister Purge Valve 2P Connector Terminal No. 1 And Body Ground**Courtesy of AMERICAN HONDA MOTOR CO., INC.***Is there battery voltage?*

YES - Go to step 18.

NO - Repair open in the wire between the EVAP canister purge valve and the No. 18 ACG (10 A) fuse in the under-dash fuse/relay box, then go to step 24.

18. Turn the ignition switch OFF.
19. Jump the SCS line with the HDS.
20. Disconnect PCM connector C (49P).
21. Check for continuity between PCM connector terminal C40 and EVAP canister purge valve 2P connector terminal No. 2.

Fig. 6: Identifying Continuity Between PCM Connector Terminal C40 And EVAP Canister Purge Valve 2P Connector Terminal No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 22.

NO - Repair open in the wire between the EVAP canister purge valve and the PCM (C40), then go to step 24.

22. At the valve side, measure resistance between EVAP canister purge valve 2P connector terminals No. 1 and No. 2.

EVAP CANISTER PURGE VALVE 2P CONNECTOR

Terminal side of male terminals

Fig. 7: Identifying Resistance Between EVAP Canister Purge Valve 2P Connector Terminals No. 1 And No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 33 ohms at room temperature?

YES - Go to step 30.

NO - Go to step 23.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EVAP System - MDX

23. Replace the EVAP canister purge valve (see **EVAP CANISTER PURGE VALVE REPLACEMENT**).
24. Reconnect all connectors.
25. Turn the ignition switch ON (II).
26. Reset the PCM with the HDS.
27. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0443 indicated?

YES - Check for poor connections or loose terminals at the EVAP canister purge valve and the PCM, then go to step 1.

NO - Go to step 29.

29. Monitor the OBD STATUS for DTC P0443 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 28, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EVAP canister purge valve and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

30. Reconnect all connectors.
31. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
32. Start the engine.
33. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0443 indicated?

YES - Check for poor connections or loose terminals at the EVAP canister purge valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 32. If the PCM was substituted, go to step 1.

NO - Go to step 34.

34. Monitor the OBD STATUS for DTC P0443 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EVAP System - MDX

original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 33, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the EVAP canister purge valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 32. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 32.

DTC P0451: FTP SENSOR RANGE/PERFORMANCE PROBLEM

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- If DTC P2422 is stored at the same time as DTC P0451, troubleshoot DTC P2422 first, then recheck for DTC P0451.

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, then let it idle.
4. Monitor the OBD STATUS for DTC P0451 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 5.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor and the PCM. If the screen indicates NOT COMPLETED, go to step 3 and recheck.

5. Turn the ignition switch OFF.
6. Replace the FTP sensor (see **FTP SENSOR REPLACEMENT**).
7. Turn the ignition switch ON (II).
8. Reset the PCM with the HDS.
9. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
10. Start the engine, then let it idle.
11. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0451 indicated?

YES - Check for poor connections or loose terminals at the FTP sensor and the PCM, then go to step 1.

NO - Go to step 12.

12. Monitor the OBD STATUS for DTC P0451 in the DTCs MENU with the HDS.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EVAP System - MDX

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 11, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 10.

DTC P0452: FTP SENSOR CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Remove the fuel fill cap.
5. Turn the ignition switch ON (II).
6. Check the FTP SENSOR in the DATA LIST with the HDS.

Is about - 7.3 kPa (-2.16 in.Hg, - 55 mmHg), or 0.3 V or less indicated?

YES - Go to step 10.

NO - Go to step 7.

7. Install the fuel fill cap.
8. Start the engine.
9. Monitor the OBD STATUS for DTC P0452 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 10.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor and the PCM. If the screen indicates NOT COMPLETED, go to step 5 and recheck.

10. Turn the ignition switch OFF.
11. Disconnect the FTP sensor 3P connector.
12. Turn the ignition switch ON (II).
13. Check the FTP SENSOR in the DATA LIST with the HDS.

Is about 7.3 kPa (2.15 in.Hg, 54.7 mmHg), or 4.90 V indicated?

YES - Go to step 24.

NO - Go to step 14.

14. Measure voltage between FTP sensor 3P connector terminal No. 1 and body ground.

FTP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 8: Identifying Voltage Between FTP Sensor 3P Connector Terminal No. 1 Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 20.

NO - Go to step 15.

15. Turn the ignition switch OFF.
16. Jump the SCS line with the HDS.
17. Disconnect PCM connector A (49P).
18. Connect FTP sensor 3P connector terminal No. 1 to body ground with a jumper wire.

FTP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 9: Identifying FTP Sensor 3P Connector Terminal No. 1 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Check for continuity between PCM connector terminal A25 and body ground.

Terminal side of female terminals

Fig. 10: Identifying Continuity Between PCM Connector Terminal A25 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 32.

NO - Repair open in the wire between the PCM (A25) and the FTP sensor, then go to step 26.

20. Turn the ignition switch OFF.
21. Jump the SCS line with the HDS.
22. Disconnect PCM connector A (49P).
23. Check for continuity between FTP sensor 3P connector terminal No. 2 and body ground.

FTP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 11: Identifying Continuity Between FTP Sensor 3P Connector Terminal No. 2 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A39) and the FTP sensor, then go to step 26.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EVAP System - MDX

NO - Go to step 32.

24. Turn the ignition switch OFF.
25. Replace the FTP sensor (see **FTP SENSOR REPLACEMENT**).
26. Reconnect all connectors.
27. Turn the ignition switch ON (II).
28. Reset the PCM with the HDS.
29. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
30. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0452 indicated?

YES - Check for poor connections or loose terminals at the FTP sensor and the PCM, then go to step 1.

NO - Go to step 31.

31. Monitor the OBD STATUS for DTC P0452 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 30, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

32. Reconnect all connectors.
33. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
34. Start the engine.
35. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0452 indicated?

YES - Check for poor connections or loose terminals at the FTP sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 34. If the PCM was substituted, go to step 1.

NO - Go to step 36.

36. Monitor the OBD STATUS for DTC P0452 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 35, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 34. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P0453: FTP SENSOR CIRCUIT HIGH VOLTAGE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Remove the fuel fill cap.
5. Turn the ignition switch ON (II).
6. Check the FTP SENSOR in the DATA LIST with the HDS.

Is about 7.3 kPa (2.16 in.Hg, 55 mmHg), or 4.7 V or more indicated?

YES - Go to step 10.

NO - Go to step 7.

7. Install the fuel fill cap.
8. Start the engine.
9. Monitor the OBD STATUS for DTC P0453 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 10.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor and the PCM. If the screen indicates NOT COMPLETED, go to step 6 and recheck.

10. Turn the ignition switch to LOCK (0).
11. Disconnect the FTP sensor 3P connector.
12. Connect FTP sensor 3P connector terminals No. 2 and No. 3 with a jumper wire.

FTP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 12: Identifying FTP Sensor 3P Connector Terminals No. 2 And No. 3 With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Turn the ignition switch ON (II).
14. Check the FTP SENSOR in the DATA LIST with the HDS.

Is about 7.3 kPa (2.16 in.Hg, 55 mmHg), or 4.7 V or more indicated?

YES - Go to step 15.

NO - Go to step 26.

15. Measure voltage between FTP sensor 3P connector terminals No. 1 and No. 3.

FTP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 13: Identifying Voltage Between FTP Sensor 3P Connector Terminals No. 1 And No. 3
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 21.

NO - Go to step 16.

16. Turn the ignition switch to LOCK (0).
17. Jump the SCS line with the HDS.

18. Disconnect PCM connector A (49P).
19. Connect FTP sensor 3P connector terminal No. 3 to body ground with a jumper wire.

FTP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 14: Identifying FTP Sensor 3P Connector Terminal No. 3 To Body Ground With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Check for continuity between PCM connector terminal A27 and body ground.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 15: Identifying Continuity Between PCM Connector Terminal A27 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 34.

NO - Repair open in the wire between the PCM (A27) and the FTP sensor, then go to step 28.

21. Turn the ignition switch to LOCK (0).
22. Jump the SCS line with the HDS.
23. Disconnect PCM connector A (49P).
24. Connect FTP sensor 3P connector terminal No. 2 to body ground with a jumper wire.

FTP SENSOR 3P CONNECTOR

Wire side of female terminals

Fig. 16: Identifying FTP Sensor 3P Connector Terminal No. 2 To Body Ground With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Check for continuity between PCM connector terminal A39 and body ground.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 17: Identifying Continuity Between PCM Connector Terminal A39 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 34.

NO - Repair open in the wire between the PCM (A39) and the FTP sensor, then go to step 28.

26. Turn the ignition switch to LOCK (0).
27. Replace the FTP sensor (see **FTP SENSOR REPLACEMENT**).
28. Reconnect all connectors.
29. Turn the ignition switch ON (II).
30. Reset the PCM with the HDS.
31. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0453 indicated?

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EVAP System - MDX

YES - Check for poor connections or loose terminals at the FTP sensor and the PCM, then go to step 1.

NO - Go to step 33.

33. Monitor the OBD STATUS for DTC P0453 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 32, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

34. Reconnect all connectors.
35. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
36. Start the engine.
37. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0453 indicated?

YES - Check for poor connections or loose terminals at the FTP sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 36. If the PCM was substituted, go to step 1.

NO - Go to step 38.

38. Monitor the OBD STATUS for DTC P0453 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 37, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 36. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P0455: EVAP SYSTEM VERY LARGE LEAK DETECTED; DTC P0456: EVAP SYSTEM VERY SMALL LEAK DETECTED

NOTE: The fuel system is designed to allow specified maximum vacuum and pressure

conditions. Do not deviate from the vacuum and pressure tests as indicated in these procedures. Excessive pressure/ vacuum would damage the EVAP components or cause eventual fuel tank failure.

Special Tools Required

- Vacuum pump/gauge, 0-30 in.Hg, Snap-on YA4000A or equivalent, commercially available
- Vacuum/pressure gauge, 0-4 in.Hg, 07JAZ-001000B

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- Fresh fuel has a higher volatility that will create greater pressure/vacuum. The optimum condition for testing is less than a full tank of fresh fuel. If possible, to assist in leak detection, add 1 gallon of fresh fuel to the tank (as long as it will not fill the tank), just before starting these procedures.

1. Check the fuel fill cap (the cap must say "TIGHTEN TO CLICK"). It should turn 1/4 turn after it's tight, then it clicks.

Is the correct fuel fill cap Installed and properly tightened?

YES - Go to step 2.

NO - Replace or tighten the cap, then go to step 22.

2. Check the fuel fill cap seal (A) and the fuel fill pipe mating surface (B). Verify that the fuel fill cap tether cord (C) is not caught under the cap.

Fig. 18: Identifying Fuel Fill Cap Seal And Fuel Fill Pipe Mating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the fuel fill cap seal missing or damaged, is the fuel fill pipe damaged, or is the tether cord caught under the cap?

YES - Replace the fuel fill cap or the fuel fill pipe (see **FUEL FILL PIPE REMOVAL/INSTALLATION**), then go to step 22.

NO - Go to step 3.

3. Turn the ignition switch ON (II).
4. Clear the DTC with the HDS.
5. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, or the EVAP canister vent shut valve, and the PCM.

NO - Go to step 6.

6. Turn the ignition switch OFF.
7. Check for a poor connection or damage at the fuel tank vapor control valve hose.

Is the tube OK?

YES - Go to step 8.

NO -

- Replace the fuel tank vapor control valve hose, then go to step 22.
 - If necessary, replace the fuel tank (see **FUEL TANK REPLACEMENT**), then go to step 22.
8. Disconnect the fuel tank vapor control valve hose (A) from the EVAP canister (B), and plug the EVAP canister port (C).

Fig. 19: Identifying Fuel Tank Vapor Control Valve Hose From EVAP Canister
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the vacuum hose (purge line) (A) from the EVAP canister purge valve (B) in the engine compartment, and connect the vacuum pump/ gauge, 0-30 in.Hg, to the vacuum hose as shown.

Fig. 20: Identifying Vacuum Hose (Purge Line) From EVAP Canister Purge Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Turn the ignition switch ON (II).
11. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
12. Apply vacuum to the hose until the FTP reads 1.90 V (-0.59 in.Hg, -15.1 mmHg).

NOTE: Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.

13. Monitor the FTP SENSOR in the DATA LIST for 1 minute with the HDS.

Does the voltage increase more than 0.2 V (0.1 in.Hg, 2.5 mmHg)?

YES - Go to step 14.

NO - Go to step 19.

14. Select EVAP CVS OFF in the INSPECTION MENU with the HDS.
15. Disconnect the fresh air hose (A) from the EVAP canister vent shut valve (B), and plug the EVAP canister vent shut valve port (C).

Fig. 21: Identifying Fresh Air Hose And EVAP Canister Vent Shut Valve

Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Apply vacuum to the EVAP system until the FTP reads 1.90 V (-0.59 in.Hg, -15.1 mmHg).

NOTE: Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.

17. Monitor the FTP SENSOR in the DATA LIST for 1 minute with the HDS.

Does the voltage increase more than 0.2 V (0.1 in.Hg, 2.5 mmHg)?

YES - Go to step 18.

NO - Replace the EVAP canister vent shut valve, then go to step 21.

18. Check for a loose or damaged EVAP canister purge line between the EVAP canister and the EVAP canister purge valve.

Is the line OK?

YES - Replace these parts, then go to step 21.

- FTP sensor O-ring
- EVAP canister vent shut valve case and O-ring
- EVAP canister

NO - Reconnect or repair the EVAP canister purge hose, then go to step 21.

19. Select EVAP CVS OFF in the INSPECTION MENU with the HDS.

20. Check these parts for looseness or damage:

- Fuel fill pipe

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EVAP System - MDX

- Fuel vapor return pipe

Are the parts OK?

YES - Check the fuel tank unit base gasket (see **FUEL TANK UNIT REMOVAL AND INSTALLATION**), and check the fuel tank, then go to step 21.

NO - Repair or replace the damaged parts, then go to step 21.

21. Reconnect all hoses and connectors.
22. Turn the ignition switch ON (II).
23. Reset the PCM with the HDS.
24. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
25. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Troubleshooting is complete.

NO - Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM, then go to step 1.

DTC P0457: EVAP SYSTEM LEAK DETECTED/FUEL FILL CAP LOOSE OR MISSING

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Check the fuel fill cap (the cap must say "TIGHTEN TO CLICK"). It should turn 1/4 turn after it's tight, then it clicks.

Is the correct fuel fill cap installed and properly tightened?

YES - Go to step 2.

NO - Replace or tighten the cap, then go to step 19.

2. Check the fuel fill cap seal (A) and the fuel fill pipe mating surface (B). Verify that the fuel fill cap tether cord (C) is not caught under the cap.

Fig. 22: Identifying Fuel Fill Cap Seal And Fuel Fill Pipe Mating Surface
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the fuel fill cap seal missing or damaged, is the fuel fill pipe damaged, or is the tether cord caught under the cap?

YES - Replace the fuel fill cap or the fuel fill pipe (see **FUEL FILL PIPE REMOVAL/INSTALLATION**), then go to step 19.

NO - Go to step 3.

3. Turn the ignition switch ON (II).
4. Clear the DTC with the HDS.
5. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM.

NO - Go to step 6.

6. Turn the ignition switch OFF.
7. Remove the EVAP canister vent shut valve from the EVAP canister (see **EVAP CANISTER VENT SHUT VALVE REPLACEMENT**).
8. Connect the 2P connector to the EVAP canister vent shut valve.
9. Turn the ignition switch ON (II).
10. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
11. Check the EVAP canister vent shut valve (A) operation.

Fig. 23: Identifying EVAP Canister Vent Shut Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the valve operate?

YES - Check the routing of the EVAP canister vent tube, then go to step 18.

NO - Go to step 12.

12. Turn the ignition switch OFF.
13. Replace the EVAP canister vent shut valve (see **EVAP CANISTER VENT SHUT VALVE REPLACEMENT**).
14. Turn the ignition switch ON (II).
15. Reset the PCM with the HDS.
16. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
17. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Troubleshooting is complete.

NO - Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM, and check all EVAP line connections, then go to step 1.

18. Reinstall the EVAP canister vent shut valve.
19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
22. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Troubleshooting is complete.

NO - Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM, and check all EVAP line connections, then go to step 1.

DTC P0496: EVAP SYSTEM HIGH PURGE FLOW

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM.

NO - Go to step 4.

4. Turn the ignition switch OFF.
5. Replace the EVAP canister purge valve (see EVAP CANISTER PURGE VALVE REPLACEMENT).
6. Turn the ignition switch ON (II).
7. Reset the PCM with the HDS.
8. Do the PCM idle learn procedure (see PCM IDLE LEARN PROCEDURE).
9. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Troubleshooting is complete.

NO - Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM, then go to step 1.

DTC P0497: EVAP SYSTEM LOW PURGE FLOW**Special Tools Required**

- Vacuum pump/gauge, 0-30 in.Hg, Snap-on YA4000A or equivalent, commercially available
- Vacuum/pressure gauge, 0-4 in.Hg, 07JAZ-001000B

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Check the fuel fill cap installation (The cap label must say "Tighten to click.". The cap should tighten 1/4 turn after it is tight.).

Is the fuel fill cap installed and properly tightened?

YES - Go to step 2.

NO - Properly install the fuel fill cap, then go to step 28.

2. Turn the ignition switch ON (II).
3. Clear the DTC with the HDS.
4. Select EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM.

NO - Go to step 5.

5. Check for poor connection, blockage, or damage at the EVAP canister purge line between the intake manifold and the EVAP canister.

Is the line OK?

YES - Go to step 6.

NO - Reconnect or repair the EVAP canister purge line, then go to step 28.

6. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B).

Fig. 24: Identifying Vacuum Hose From EVAP Canister Purge Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the vacuum hose (A) from the purge line (at the EVAP canister side), and connect a T-fitting (B) from the vacuum gauge and the vacuum pump/gauge, 0-30 in.Hg, to the hose as shown.

Fig. 25: Identifying T-Fitting From Vacuum Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Select EVAP PCS ON in the INSPECTION MENU with the HDS.
9. Slowly apply about 2 kPa (0.6 in.Hg, 15 mmHg) of vacuum to the hose.

Does it hold vacuum?

YES - Go to step 10.

NO - Go to step 15.

10. Select EVAP PCS OFF in the INSPECTION MENU with the HDS.
11. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B). Connect a T-fitting (C) from the vacuum gauge and the vacuum pump/ gauge, 0-30 in.Hg, to the hose (D) as shown.

Fig. 26: Identifying T-Fitting From Vacuum Gauge
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Turn the ignition switch ON (II).
13. Select EVAP PCS ON in the INSPECTION MENU with the HDS.
14. Slowly apply about 2 kPa (0.6 in.Hg, 15 mmHg) of vacuum to the hose.

Does it hold vacuum?

YES - Replace the EVAP canister purge valve (see **EVAP CANISTER PURGE VALVE REPLACEMENT**), then go to step 28.

NO - Check for blockage in the vacuum hose between the EVAP canister purge valve and the EVAP canister, then go to step 28.

15. Connect the vacuum pump/gauge, 0-30 in.Hg, to the vacuum hose (A) as shown.

Fig. 27: Identifying Vacuum Pump/Gauge To Vacuum Hose
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Start the engine, and let it idle.

Is there vacuum?

YES - Go to step 17.

NO - Check for blockage in the vacuum hose between the EVAP canister purge valve and the intake manifold, then go to step 28.

17. Turn the ignition switch OFF.
18. Remove the FTP sensor with its connector connected (see **FTP SENSOR REPLACEMENT**).
19. Connect a T-fitting (A) from the vacuum pump/ gauge, 0-30 in.Hg, and the vacuum pump to the FTP sensor (B) as shown.

Fig. 28: Identifying T-Fitting From Vacuum Pump/Gauge

Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Check and record the FTP SENSOR reading in the DATA LIST with the HDS.
21. Slowly apply about 1.3 kPa (0.4 in.Hg, 10 mmHg) of vacuum to the hose.

NOTE: Be careful not to exceed the vacuum. If you do, the FTP sensor can be damaged.

22. Check the FTP SENSOR in the DATA LIST with the HDS.

Is the difference more than 1.1 kPa (0.31 in.Hg, 8 mmHg) before and after applying vacuum?

YES - Go to step 23.

NO - Replace the FTP sensor (see **FTP SENSOR REPLACEMENT**), then go to step 27.

23. Reconnect the vacuum hoses to the EVAP canister purge line (EVAP canister side), and reinstall the FTP sensor.
24. Disconnect the vacuum hose (purge line) (A) from the EVAP canister purge valve (B) in the engine compartment, and connect a T-fitting (C) from the vacuum gauge and the vacuum pump/gauge, 0-30 in.Hg, to the vacuum hose (A) as shown.

Fig. 29: Identifying T-Fitting From Vacuum Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
26. Slowly apply about 2 kPa (0.6 in.Hg, 15 mmHg) of vacuum to the hose.

Does the hose hold vacuum?

YES - Check for blockage at the EVAP canister port; then go to step 27.

NO - Replace the EVAP canister vent shut valve (see **EVAP CANISTER VENT SHUT VALVE REPLACEMENT**), then go to step 27.

27. Reconnect all hoses.
28. Turn the ignition switch ON (II).
29. Reset the PCM with the HDS.
30. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
31. Do the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

Is the result OK?

YES - Troubleshooting is complete.

NO - Check for poor connections or loose terminals at the FTP sensor, the EVAP canister purge valve, the EVAP canister vent shut valve, and the PCM, then go to step 1.

DTC P0498: EVAP CANISTER VENT SHUT VALVE CONTROL CIRCUIT LOW VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0498 indicated?

YES - Go to step 6.

NO - Go to step 4.

4. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0498 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EVAP canister vent shut valve and the PCM.

6. Turn the ignition switch OFF.
7. Disconnect the EVAP canister vent shut valve 2P connector.
8. Turn the ignition switch ON (II).
9. Measure voltage between EVAP canister vent shut valve 2P connector terminal No. 2 and body ground.

EVAP CANISTER VENT SHUT VALVE 2P CONNECTOR

Wire side of female terminals

Fig. 30: Identifying Voltage Between EVAP Canister Vent Shut Valve 2P Connector Terminal No. 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 10.

NO - Repair open in the wire between the EVAP canister vent shut valve and the under-hood fuse/ relay box (PGM-FI subrelay), then go to step 18.

10. Turn the ignition switch OFF.
11. At the valve side, measure resistance between EVAP canister vent shut valve 2P connector terminals No. 1 and No. 2.

EVAP CANISTER VENT SHUT VALVE 2P CONNECTOR

Terminal side of male terminals

Fig. 31: Identifying Resistance Between EVAP Canister Vent Shut Valve 2P Connector Terminals No. 1 And No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 25 - 30 ohms at room temperature?

YES - Go to step 12.

NO - Go to step 17.

12. Jump the SCS line with the HDS.
13. Disconnect PCM connector A (49P).
14. Check for continuity between PCM connector terminal A22 and body ground.

Fig. 32: Identifying Continuity Between PCM Connector Terminal A22 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the EVAP canister vent shut valve and the PCM (A22), then go to step 18.

NO - Go to step 15.

15. Connect EVAP canister vent shut valve 2P connector terminal No. 1 to body ground with a jumper wire.

EVAP CANISTER VENT SHUT VALVE 2P CONNECTOR

Fig. 33: Identifying EVAP Canister Vent Shut Valve 2P Connector Terminal No. 1 To Body Ground With Jumper Wire
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check for continuity between PCM connector terminal A22 and body ground.

Fig. 34: Identifying Continuity Between PCM Connector Terminal A22 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 24.

NO - Repair open in the wire between the EVAP canister vent shut valve and the PCM (A22), then go to step 18.

17. Replace the EVAP canister vent shut valve (see **EVAP CANISTER VENT SHUT VALVE REPLACEMENT**).
18. Reconnect all connectors.
19. Turn the ignition switch ON (II).
20. Reset the PCM with the HDS.
21. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
22. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
23. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0498 indicated?

YES - Check for poor connections or loose terminals at the EVAP canister vent shut valve and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

24. Reconnect all connectors.
25. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
26. Select EVAP CVS ON in the INSPECTION MENU with the HDS.

27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0498 indicated?

YES - Check for poor connections or loose terminals at the EVAP canister vent shut valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

DTC P0499: EVAP CANISTER VENT SHUT VALVE CONTROL CIRCUIT HIGH VOLTAGE

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).**

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0499 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the EVAP canister vent shut valve and the PCM.

5. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
6. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
7. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0499 indicated?

YES - Check for poor connections or loose terminals at the EVAP canister vent shut valve and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 6. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

DTC P1454: FTP SENSOR RANGE/PERFORMANCE PROBLEM; DTC P2422: EVAP CANISTER VENT SHUT VALVE CLOSE MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch OFF.
4. Remove the fuel fill cap, and wait 1 minute.
5. Check the FTP SENSOR in the DATA LIST with the HDS.

Is it between - 0.67 and 0.67 kPa (- 0.2 and 0.2 in.Hg, - 5 and 5 mmHg), or 2.4 and 2.6 V?

YES - Go to step 6.

NO - Go to step 17.

6. Install the fuel fill cap.
7. Clear the DTC with the HDS.
8. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park on neutral) until the radiator fan comes on, then let it idle.
9. Monitor the OBD STATUS for DTC PI 454 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 10.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM. If the screen indicates NOT COMPLETED, go to step 8 and recheck.

10. Clear the DTC with the HDS.
11. Turn the ignition switch OFF.
12. Remove the EVAP canister vent shut valve from the EVAP canister (see EVAP CANISTER VENT SHUT VALVE REPLACEMENT).
13. Connect the 2P connector to the EVAP canister vent shut valve.
14. Turn the ignition switch ON (II).
15. Select EVAP CVS ON in the INSPECTION MENU with the HDS.
16. Check the EVAP canister vent shut valve (A) operation.

Fig. 35: Identifying EVAP Canister Vent Shut Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the valve operate?

YES - Check for a blockage in the EVAP canister, canister filter, vent hoses, and drain joint, then install the EVAP canister vent shut valve, and go to step 23.

NO - Replace the EVAP canister vent shut valve (see **EVAP CANISTER VENT SHUT VALVE REPLACEMENT**), then go to step 23.

17. Disconnect the air tube (A) from the FTP sensor (B).

Fig. 36: Identifying Air Tube And FTP Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Check the FTP SENSOR in the DATA LIST with the HDS.

Is it between - 0.67 and 0.67 kPa (- 0.2 and 0.2 in.Hg, - 5 and 5 mmHg), or 2.4 and 2.6 V?

YES - Check for a blockage in the FTP sensor air tube or vent, then go to step 23.

NO - Go to step 19.

19. Turn the ignition switch OFF.
20. Remove the FTP sensor (A) from the EVAP canister with its connector connected (see **FTP SENSOR REPLACEMENT**).

Fig. 37: Identifying FTP Sensor

Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Turn the ignition switch ON (II).
22. Check the FTP SENSOR in the DATA LIST with the HDS.

Is it between - 0.67 kPa and 0.67 kPa (- 0.2 and 0.2 in.Hg, - 5 and 5 mmHg), or 2.4 and 2.6 V?

YES - Check for debris or clogging at the EVAP canister and the FTP sensor port, then go to step 23.

NO - Replace the FTP sensor (see **FTP SENSOR REPLACEMENT**), then go to step 23.

23. Turn the ignition switch ON (II).
24. Reset the PCM with the HDS.
25. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
26. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park on neutral) until the radiator fan comes on, then let it idle.
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1454 and/or P2422 indicated?

YES - Check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM, then go to step 1.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE EVAP System - MDX

NO - Go to step 28.

28. Monitor the OBD STATUS for DTC P1454 and/or P2422 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 27, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the FTP sensor, the EVAP canister vent shut valve, and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

DTC P145C: EVAP SYSTEM PURGE FLOW MALFUNCTION (VACUUM LINE)

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).
- This DTC is representative of an EVAP system purge flow problem. If DTC P145C is indicated alone, troubleshoot P0496 and P0497 using the freeze data for P145C.
- If any of the DTCs listed below are indicated at the same time as DTC P145C, troubleshoot those DTC first, then recheck for P145C: P0496, P0497: EVAP system purge flow

FUEL CAP WARNING MESSAGE SYSTEM TROUBLESHOOTING

Special Tools Required

- Vacuum pump/gauge, 0-30 in.Hg, Snap-on YA4000A or equivalent, commercially available
- Vacuum/pressure gauge, 0-4 in.Hg 07JAZ-001000B

When the fuel fill cap warning message does not go off after fuel fill cap tightened, or the message turned on frequently, do this troubleshooting procedure.

1. Check the fuel fill cap (the cap must say "Tighten to click"). It should turn 1/4 after it's tight, then it clicks.

Is the correct fuel fill cap installed and properly tightened?

YES - Go to step 2.

NO - Replace or tighten the cap, then go to step 13.

2. Check the fuel fill cap seal (A) and the fuel fill pipe mating surface (B). Verify that the fuel fill cap tether

cord (C) is not caught under the cap.

Fig. 38: Identifying Fuel Fill Cap Seal And Fuel Fill Pipe Mating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the fuel fill cap seal missing or damaged, is the fuel fill pipe damaged, or is the tether cord caught under the cap?

YES - Replace the fuel fill cap or the fuel fill pipe (see **FUEL FILL PIPE REMOVAL/INSTALLATION**), then go to step 13.

NO - Go to step 3.

3. Reinstall and tighten the fuel fill cap.
4. Clear the DTC with the HDS.
5. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle for 1 minute.
6. Test-drive at 45 mph (72 km/h) 1 minute or more.

Does the fuel cap message come on?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time.

7. Turn the ignition switch OFF.
8. Disconnect the vacuum hose (A) from the EVAP canister purge valve (B) in the engine compartment. Connect a T-fitting (C) from the vacuum gauge and the vacuum pump/gauge, 0-30 in.Hg, to the vacuum hose (D) as shown.

Fig. 39: Identifying T-Fitting From Vacuum Gauge And Vacuum Pump/Gauge To Vacuum Hose
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Apply vacuum to the hose about 2 kPa (0.6 in.Hg, 15 mmHg).
10. Turn the ignition switch ON (II).
11. Select the EVAP PCS ON in the INSPECTION MENU with the HDS.

Release the vacuum immediately?

YES - Check for vacuum hose blockage between the EVAP canister purge valve and the EVAP canister, then go to step 12.

NO - Replace the EVAP canister purge valve (see **EVAP CANISTER PURGE VALVE REPLACEMENT**), then go to step 12.

12. Install the parts in the reverse order of removal.
13. Turn the ignition switch ON (II).
14. Reset the PCM with the HDS.
15. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
16. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle for 1 minute.
17. Test-drive at 45 mph (72 km/h) for 1 minute or more.

Does the fuel fill cap message come on?

YES - Go to step 1 and recheck.

NO - Troubleshooting is complete.

FTP SENSOR REPLACEMENT

1. Remove the EVAP canister cover (A).

Fig. 40: Identifying EVAP Canister Cover And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the FTP sensor connector (A).

Fig. 41: Identifying FTP Sensor Connector And Hose With FTP Sensor

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the hose (B), remove the retainer (C) and remove the FTP sensor (D).
4. Install the parts in the reverse order of removal with a new O-ring (E).

EVAP CANISTER PURGE VALVE REPLACEMENT

1. Disconnect the hoses (A) and EVAP canister purge valve connector (B).

Fig. 42: Identifying Hoses And EVAP Canister Purge Valve Connector With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the EVAP canister purge valve and the bracket (C).
3. Remove the EVAP canister purge valve (A) from the bracket (B).

Fig. 43: Identifying EVAP Canister Purge Valve With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the parts in the reverse order of removal.

EVAP CANISTER VENT SHUT VALVE REPLACEMENT

1. Remove the EVAP canister (see EVAP CANISTER REPLACEMENT).
2. Pry the lock tabs outward (A), then remove the EVAP canister vent shut valve (B).

NOTE: Be careful not to damage the lock tabs.

Fig. 44: Identifying EVAP Canister Vent Shut Valve With O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the parts in the reverse order of removal with a new O-ring (C).

NOTE: Do not coat the O-ring with oil.

EVAP CANISTER FILTER REPLACEMENT

1. Disconnect the hoses (A).
2. Remove the EVAP canister filter and bracket (B).

Fig. 45: Identifying EVAP Canister Filter And Bracket With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the EVAP canister filter (A) from the bracket (B).

Fig. 46: Identifying EVAP Canister Filter From Bracket With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the parts in the reverse order of removal.

EVAP CANISTER REPLACEMENT

1. Remove the EVAP canister cover (A). Open the clamps (B).

Fig. 47: Identifying EVAP Canister Cover And Clamps With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the hoses (A), the FTP sensor connector (B), and the EVAP canister vent shut valve connector (C).

Fig. 48: Identifying Hoses, FTP Sensor Connector And EVAP Canister Vent Shut Valve Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (D).

4. Remove the EVAP canister assembly (E).
5. Remove the EVAP canister bracket (A).

Fig. 49: Identifying EVAP Canister Bracket With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pry the lock tabs outward (A), then remove the EVAP canister vent shut valve (B).

NOTE: Be careful not to damage the lock tabs.

Fig. 50: Identifying EVAP Canister Vent Shut Valve With O-Ring With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the EVAP canister vent shut valve in the new EVAP canister with a new O-ring (C).

2008 Acura MDX
2007-09 ENGINE PERFORMANCE EVAP System - MDX

NOTE: **Do not coat the O-ring with oil.**

8. Install the parts in the reverse order of removal.

SYSTEM DESCRIPTION

DAYTIME RUNNING LIGHTS

The daytime running lights system is composed of the relay control module, the combination control unit, the left and right daytime running lights, and the DRL indication on the multi-information display (MID). The

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Exterior Lights - MDX

daytime running lights operate with the ignition switch ON (II), the headlights off, and the parking brake released.

When the daytime running lights are on, the relay control module turns the left and right daytime running lights control circuit on and off (duty cycle) which provides a reduced voltage (approximately 6-8 volts) via the No. 1 and No. 2 fuses in the under-hood fuse/relay box. The DRL comes on with reduced brightness.

The gauge control module will show the DRL indication on the multi-information display (MID) with the ignition switch ON (II) and the parking brake released when a problem is detected with the daytime running lights circuit.

NOTE: **The daytime running lights are disabled when the ignition switch is turned to LOCK (0). To keep the daytime running lights from coming on, apply the parking brake switch while the ignition switch is in the LOCK (0) position. When you then turn the ignition switch back ON (II), the daytime running lights will not come on until the parking brake is released.**

DTC TROUBLESHOOTING

DTC B1075: HEADLIGHT SWITCH BACK-UP CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Turn the headlight switch ON for 5 seconds and OFF.
4. Check for DTCs with the HDS.

Is DTC B1075 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Select BODY ELECTRICAL system select menu, then enter the DATA LIST menu.
6. Check the ON/OFF information of the HEADLIGHT BACK-UP with the HDS.

Is OFF indicated?

YES - Go to step 7.

NO - Check for a short in the WHT wire between the combination switch control unit and the relay control module (H/L BACK-UP line) or between the combination switch control unit and the MICU, if the harness is OK, replace the combination switch control unit (see **WIPER/WASHER SWITCH REPLACEMENT**).

7. Turn the headlight switch ON.
8. Select BODY ELECTRICAL system select menu, then enter the DATA LIST menu.
9. Check the ON/OFF information of the HEADLIGHT BACK-UP with the HDS.

Is ON indicated?

YES - Go to the relay control module input test (see **RELAY CONTROL MODULE INPUT TEST**) and check for a poor ground, if the GND line is OK, replace the under-hood fuse/ relay box (see **REMOVAL AND INSTALLATION**).

NO - Check for an open in the wire between the combination switch control unit and the relay control module (H/L BACK-UP line) or between the combination switch control unit and the MICU, if the wire is OK, replace the combination switch control unit (see **WIPER/WASHER SWITCH REPLACEMENT**).

RUNNING LIGHTS SYSTEM ERROR (USA)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Turn the headlight switch OFF, and apply the parking brake.
2. Turn the ignition switch ON (II).
3. Clear the DTCs with the HDS.
4. Release the parking brake.
5. Turn the ignition switch to LOCK (0), and then back ON (II).
6. Check for DTCs with the HDS.

Is DTC B1078 or B1079 indicated?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

7. Turn the ignition and headlight switches OFF.
8. Check the No. 1 (10 A) and No. 2 (10 A) fuses in the under-hood fuse/relay box.

Are the fuses OK?

YES - Go to step 9.

NO - Replace the blown fuse and recheck. If the fuse blows again, repair short in the wire between the under-hood fuse/relay box and the appropriate daytime running lights.

9. Check the daytime running light bulbs.

Are the daytime running light bulbs OK?

YES - Go to step 10.

NO - Replace the faulty bulb.

10. Disconnect under-hood fuse/relay box connector G (4P).
11. Disconnect each daytime running light 2P connector.
12. Check for continuity between each daytime running light 2P connector No. 2 terminal and the under-hood fuse/relay box connector G (4P) No. 1 and No. 2 terminals respectively.

UNDER-HOOD FUSE/RELAY BOX CONNECTOR G (4P)

Wire side of female terminals

LEFT DAYTIME RUNNING LIGHT 2P CONNECTOR

Wire side of female terminals

UNDER-HOOD FUSE/RELAY BOX CONNECTOR G (4P)

Wire side of female terminals

RIGHT DAYTIME RUNNING LIGHT 2P CONNECTOR

Wire side of female terminals

Fig. 11: Identifying Continuity Between Under-Hood Fuse/Relay Box G (4P) Terminals And Right Daytime Running Light 2P Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair open in the wire.

13. Check for continuity between the No. 1 terminal of each daytime running light 2P connector and body ground.

LEFT DAYTIME RUNNING LIGHT 2P CONNECTOR

Wire side of female terminals

Fig. 12: Identifying Continuity Between No. 1 Terminal Of Left Daytime Running Light 2P Connector And Body Ground

RIGHT DAYTIME RUNNING LIGHT 2P CONNECTOR

Wire side of female terminals

Fig. 13: Identifying Continuity Between No. 1 Terminal Of Right Daytime Running Light 2P Connector And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the relay control module.

NO - Repair open in the BLK wire or poor ground (G201-right side, G301-left side).

DTC B1252: COMBINATION SWITCH CONTROL UNIT INTERNAL (EEPROM) ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1252 indicated?

YES - Replace the combination switch control unit (see **WIPER/WASHER SWITCH REPLACEMENT**).

NO - Intermittent failure, the system is OK at this time.

DTC B1255: COMBINATION SWITCH CONTROL UNIT LOST COMMUNICATION WITH MICU (MICU MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1255 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the combination switch control unit and the MICU.

5. Check for DTCs with the HDS.

Are DTCs B1055, B1157, B1806, B1955, and B2155 also indicated?

YES - Do the MICU input test (see **MICU INPUT TEST**).

NO - Do the combination switch control unit input test (see **WIPER/WASHER SWITCH (COMBINATION SWITCH CONTROL UNIT) INPUT TEST**).

DTC B1275: COMBINATION LIGHT SWITCH OFF POSITION CIRCUIT MALFUNCTION; DTC B1276: COMBINATION LIGHT SWITCH PARKING (SMALL) POSITION CIRCUIT MALFUNCTION; DTC B1277: HEADLIGHT SWITCH AUTO POSITION CIRCUIT MALFUNCTION; DTC B1278: HEADLIGHT SWITCH ON POSITION CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Exterior Lights - MDX

2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Operate each combination light switch position for more than 2 seconds, then turn the combination light switch OFF.
4. Check for DTCs with the HDS.

Is DTC B1275, B1276, B1277 and/or B1278 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0).
6. Do the combination light switch test (see **COMBINATION LIGHT SWITCH TEST/REPLACEMENT**) and check for open or short in the combination light switch terminals in each switch position.

Is the combination light switch OK?

YES - Faulty combination switch control unit, replace the wiper/washer switch.

NO - Replace the combination light switch.

DTC B1279: HEADLIGHT SWITCH DIMMER POSITION CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Turn the headlight switch ON.
4. Change the DIMMER switch from low beam to high beam and wait for 2 seconds.
5. Pull and hold the combination light switch lever, and hold the passing switch position for more than 2 seconds.
6. Check for DTCs with the HDS.

Is DTC B1279 indicated?

YES - Go to step 7.

NO - Intermittent failure, the headlight switch DIMMER circuit is OK at this time. Check for loose or poor connections.

7. Turn the ignition switch to LOCK (0).

8. Do the combination light switch test (see **COMBINATION LIGHT SWITCH TEST/REPLACEMENT**) and check for open or short in the combination light switch terminals in each switch position.

Is the combination light switch OK?

YES - Faulty combination switch control unit, replace the wiper/washer switch.

NO - Replace the combination light switch.

DTC B1280: TURN SIGNAL SWITCH CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Turn the turn signal switch to left position and wait for 2 seconds, then turn to right position and wait for 2 seconds.
4. Check for DTCs with the HDS.

Is DTC B1280 indicated?

YES - Go to step 5.

NO - Intermittent failure, the turn signal switch circuit is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0).
6. Do the combination light switch test (see **COMBINATION LIGHT SWITCH TEST/REPLACEMENT**) and check for open or short in the turn signal switch terminals in each switch position.

Is the turn signal switch OK?

YES - Faulty combination switch control unit, replace the wiper/washer switch.

NO - Replace the combination light switch.

DTC B1575: AUTOMATIC LIGHTING SENSOR CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Check for DTCs with the HDS.

Is DTC B1575 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the automatic lighting sensor and the MICU.

4. Turn the ignition switch to LOCK (0).
5. Disconnect under-dash fuse/relay box connector P OOP).
6. Disconnect the automatic lighting sensor 5P connector.
7. Disconnect gauge control module connector A (12P).
8. Check for continuity between the under-dash fuse/ relay box connector P (30P) No. 14, No. 27, and No. 30 terminals and the automatic lighting sensor 5P connector No. 1, No. 3 and No. 5 terminals respectively.

Fig. 14: Identifying Continuity Between Under-Dash Fuse/ Relay Box Terminals And Automatic Lighting Sensor Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair an open in the wire.

9. Check for continuity between the automatic lighting sensor 5P connector No. 1 and No. 3 terminals.

AUTOMATIC LIGHTING SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 15: Identifying Continuity Between Automatic Lighting Sensor 5P Connector No. 1 And No. 3 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wire between the No. 1 and No. 3 terminals.

NO - Go to step 10.

10. Reconnect under-dash fuse/relay box connector P (30P).
11. Turn the ignition switch ON (II).
12. Measure the voltage between the automatic lighting sensor 5P connector No. 1 and No. 5 terminals.

AUTOMATIC LIGHTING SENSOR 5P CONNECTOR

Wire side of female terminals

Fig. 16: Identifying Voltage Between Automatic Lighting Sensor 5P Connector No. 1 And No. 5 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Replace the automatic lighting sensor.

NO - Replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**).

COMBINATION LIGHT SWITCH TEST/REPLACEMENT

1. Remove the driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Remove the steering column covers (see **COLUMN COVER REMOVAL/INSTALLATION**).
3. Disconnect the combination light switch 20P connector (A) from the combination light switch (B).

Fig. 17: Identifying Combination Light Switch 20P Connector From Combination Light Switch
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the two screws, then slide out the combination light switch.
5. Inspect the connector terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, check for continuity between the terminals in each switch position according to the tables.

1	2	3	4	5	6	7	8	9	10

6. If the continuity check is not as specified, replace the switch.

HID LAMP SYSTEM TROUBLESHOOTING

WARNING: A transient high tension (25,000 V) occurs at the bulb sockets or the high intensity discharge (HID) lamps when the combination light switch is turned ON, it may cause serious electrical shock or electrocution if you do not observe the cautions.

CAUTION:

- Never turn on the combination light switch before fitting the HID bulbs to their bulb sockets and completing the reassembly of the

headlight assembly.

- Do not service the headlights assembly in wet conditions, such as rain or snow, near a sprinkler system, or when your hands are wet to prevent electrocution.
- Do not touch the surface of the HID bulbs with your bare hands and do not stain it with any oils and fats.
- Do not disassemble the inverter unit and the igniter unit.
- Do not turn on the HID bulb by using a power source other than the battery mounted on your vehicle.

Special Tools Required

HID bulb test light assembly 07AAJ-S3MA100

NOTE: Before troubleshooting the HID Lamp System, perform the multiplex integrated control system troubleshooting using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Check the No. 18 (15 A) and No. 19 (15 A) fuses in the under-hood fuse/relay box.

Are the fuses OK?

YES - Go to step 2.

NO - Replace the fuse(s), and recheck.

2. Do the battery terminal disconnection procedure(See DISCONNECTION .
3. Remove the bulb socket from the HID bulb (see HID BULB REPLACEMENT).
4. Check for corrosion and traces of electrical arcing on the contacts of the socket (A).

Fig. 22: Identifying Contacts Of Socket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the socket corroded or burnt?

YES - Replace the socket, and recheck.

NO - Go to step 5.

5. Connect the HID bulb test light assembly (A) to the bulb socket (B).

Fig. 23: Identifying HID Bulb Test Light Assembly To Bulb Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Do the battery terminal reconnection procedure (See **RECONNECTION**)
7. Turn the combination light (headlight) switch ON.

Does the bulb in the test light come on?

YES - Replace the original HID bulb (see **HID BULB REPLACEMENT**).

NO - Go to step 8.

8. Turn the combination light (headlight) switch OFF.
9. Do the battery terminal disconnection procedure (See **DISCONNECTION**)
10. Remove the HID bulb test light assembly from the bulb socket.
11. Disconnect the HID unit 2P connector.
12. Check for continuity between the No. 1 terminal of the HID unit 2P connector and body ground.

HID UNIT 2P CONNECTOR

Wire side of female terminals

Fig. 24: Identifying Continuity Between No. 1 Terminal Of HID Unit 2P Connector And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty HID unit.

NO - Repair open in the wire between the HID unit and body ground. If the wire is OK, check for poor ground (G201/G301).

HEADLIGHT ADJUSTMENT

CAUTION: Headlights become very hot during use; do not touch them or any attaching hardware immediately after they have been turned off.

Before adjusting the headlights:

- Park the vehicle on a level surface.
 - Make sure the tire pressures are correct.
 - The driver or someone who weighs the same should sit in the driver's seat.
1. Clean the outer lens so that you can see the center (A) of the headlights.

**Fig. 25: Identifying Center Of Headlights**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Park the vehicle in front of a wall or a screen (A).

Fig. 26: Identifying Headlights Adjusting Screen And Distance Between Vehicle And Screen
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the low beams on.
4. Determine if the headlights are aimed properly.

Vertical adjustment:

Measure the height of the headlights (A).

Adjust the cut line (B) to the lights height.

Fig. 27: Identifying Height Of Headlights And Cut Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If necessary, open the hood and adjust the headlights to local requirements by turning the vertical adjuster.

Fig. 28: Identifying Headlights

Courtesy of AMERICAN HONDA MOTOR CO., INC.

HEADLIGHT REPLACEMENT

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Remove the connectors (A) from the headlight assembly (B).

Fig. 29: Identifying Connectors, Headlight Assembly, Strap Bolt And Upper Beam

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the security strap bolt (C).
4. Remove the clips and bolts, then remove the headlight.

5. Remove the bolts (D) and the corner upper beam (E) from the headlight.
6. Install the headlight in the reverse order of removal.
7. After the replacement, do the headlights learning procedure (see **HEADLIGHT INITIAL POSITION LEARNING PROCEDURE**) and aim the headlights to local requirements.

HID UNIT REPLACEMENT

1. Do the battery terminal disconnection procedure(See **DISCONNECTION**).
2. Remove the headlight assembly (see **HEADLIGHT REPLACEMENT**).
3. Remove the three mounting screws and the HID unit (A).

Fig. 30: Identifying HID Unit With Mounting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the 4P connector (B) from the HID unit.
5. Inspect the gasket for damage. If damaged, replace it.
6. Install the parts in the reverse order of removal.
7. Do the battery terminal reconnection procedure(See **RECONNECTION**) .

HID BULB REPLACEMENT

WARNING: A transient high tension (25,000 V) occurs at the bulb sockets of the high intensity discharge (HID) lamps when the combination light switch is turned ON, it may cause serious electrical shock or electrocution if you do not observe the cautions.

CAUTION:

- Never turn on the combination light switch before fitting the HID bulbs to their bulb sockets and completing the reassembly of the headlight assembly.
- Do not service the headlights assembly in wet conditions, such as rain or snow, near a sprinkler system, or when your hands are wet to prevent electrocution.

- Do not touch the surface of the HID bulbs with your bare hands and do not stain it with any oils and fats.
- Do not disassemble the inverter unit and the igniter unit.
- Do not turn on the HID bulb by using a power source other than the battery mounted on your vehicle.

1. Do the battery terminal disconnection procedure(See **DISCONNECTION** .
2. Remove the headlight assembly (see **HEADLIGHT REPLACEMENT**).
3. Turn the cover (A) 45° counterclockwise to remove it from the headlight assembly.

Fig. 31: Identifying Cover To Removing From Headlight Assembly
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the socket (A) 45 ° counterclockwise to remove it from the bulb (B).

Headlight: 35 W

5. Pull the retaining spring (C) away from the bulb then remove the bulb.
6. Install a new bulb in the reverse order of removal. Make sure the notches in the bulb align with the tabs in the headlight.
7. Do the battery terminal reconnection procedure(See **RECONNECTION**

Fig. 32: Identifying Socket To Removing From Bulb

Courtesy of AMERICAN HONDA MOTOR CO., INC.

BULB REPLACEMENT

HEADLIGHT BULB (HIGH BEAM)

1. Remove the front bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
2. For the left headlight, remove the battery cover, remove the battery hold-down by removing the two nuts, then slide the battery to access the bulb.
3. Disconnect the 2P connector (A) from the headlight bulb socket (B).

Headlight Bulb: 60 W

Fig. 33: Identifying 2P Connector From Headlight Bulb Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the bulb socket 45° counterclockwise to remove it from the headlight housing.
5. Install a new bulb in the reverse order of removal. Make sure the notches in the bulb align with the tabs in the headlight.

NOTE: Do not touch the glass of the bulb with your hands. If necessary, clean the glass area with alcohol.

FRONT PARKING LIGHT BULB

1. Remove the front bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
2. For right parking light, remove the clip from windshield washer reservoir.
3. Disconnect the 2P connector (A) from the front parking light bulb socket (B).

Front Parking Light Bulb: 3 CP

Fig. 34: Identifying 2P Connector From Front Parking Light Bulb Socket
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the bulb socket 45° counterclockwise to remove it from the headlight housing.
5. Install a new bulb in the reverse order of removal.

FRONT TURN SIGNAL LIGHT BULB

1. Remove the front bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
2. For the left light, remove the battery cover, remove the battery hold-down by removing the two nuts, then slide the battery to access the bulb.
3. Disconnect the 3P connector (A) from the bulb socket (B).

Front Turn Signal Light Bulb: 21 W B

Fig. 35: Identifying 3P Connector From Bulb Socket
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the bulb socket 45° counterclockwise to remove it from the headlight housing.
5. Install a new bulb in the reverse order of removal.

FRONT SIDE MARKER LIGHT BULB

1. Disconnect the 2P connector (A) from the front turn signal/front parking light.

Front Side Marker Light Bulb: 3 CP

Fig. 36: Identifying 2P Connector From Front Turn Signal/Front Parking Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the bulb socket (B) 45° counterclockwise to remove it from the headlight housing.
3. Install a new bulb in the reverse order of removal.

FOG LIGHT/DAYTIME RUNNING LIGHT REPLACEMENT

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Disconnect the 2P connectors from the fog light and the daytime running light.

Fig. 37: Identifying 2P Connectors And Fog Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screw, then remove the light.
4. Install the light in the reverse order of removal.

5. After replacement, adjust the fog lights/daytime running lights (see **FOG LIGHT/DAYTIME RUNNING LIGHT ADJUSTMENT**).

FOG LIGHT/DAYTIME RUNNING LIGHT ADJUSTMENT

Before adjusting the fog light/daytime running light:

- Park the vehicle on a level surface.
- Make sure the tire pressures are correct.
- Have the driver or someone who weighs the same sit in the driver's seat.

Adjust the fog lights/daytime running lights to local requirements by turning the adjuster (A).

Fig. 38: Identifying Fog Lights/Daytime Running Lights
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FOG LIGHT/DAYTIME RUNNING LIGHT BULB REPLACEMENT

1. Remove the inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Disconnect the 2P connectors (A) from the fog lights/daytime running lights (B).

Fog Light: 55 W

Daytime Running Light: 60 W

Fig. 39: Identifying 2P Connectors From Fog Lights/Daytime Running Lights
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the fog light bulb socket (C) and the daytime running light bulb socket (D) 45° counterclockwise to remove them from the housing.
4. Install new bulb(s) in the reverse order of removal.

NOTE: Do not touch the glass of the bulb with your hands. If necessary, clean the glass area with alcohol.

TAILLIGHT REPLACEMENT

TAILLIGHT

1. Remove the covers (A) and two bolts from the taillight (B).

Rear Turn Signal Light: 21 W

Rear Side Marker Light: 3 CP

Fig. 40: Identifying Covers, Taillight Bolts, Connector, Bulb Sockets And Bulbs
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Carefully pull out the taillight.
3. Disconnect the connectors (C) from the taillight.
4. Turn the bulb sockets (D) 45° counterclockwise to remove the bulbs (E).
5. Install the light in the reverse order of removal.

INNER TAILLIGHT

1. Remove the tailgate lower trim panel (see TRIM REMOVAL/INSTALLATION - TAILGATE AREA).
2. Disconnect the 2P connector (A) from the inner taillight (B).

Fig. 41: Identifying 2P Connector And Inner Taillight
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the five nuts, then remove the inner taillight.
4. Turn the bulb socket (A) 45° counterclockwise to remove the bulb(B).

Back-up Light: 21 W

Fig. 42: Identifying Bulb Socket To Removing Bulb
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the light in the reverse order of removal.

TAILLIGHT/BRAKE LIGHT LED REPLACEMENT

1. Remove the taillight (see **TAILLIGHT REPLACEMENT**).
2. Remove the four screws (A) and the back cover (B) from the taillight (C).

Fig. 43: Identifying Four Screws, Back Cover, Taillight, Connector And Taillight/Brake Light Led
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully disconnect the connector (D) from the taillight/brake light LED (E).
4. Remove the two screws (F) and the taillight/brake light LED from the taillight housing.
5. Inspect the gasket, if the gasket is distorted or compressed, replace it.
6. Install a new LED in the reverse order of removal.

LICENSE PLATE LIGHT REPLACEMENT

1. Pull the license plate light assembly out, and disconnect the 2P connector (A) from the light.

License Plate Light: 3 CP

Fig. 44: Identifying 2P Connector And License Plate Light Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Separate the lens (B) and housing (C), then remove the bulb.
3. Install the light in the reverse order of removal.

HIGH MOUNT BRAKE LIGHT REPLACEMENT

1. Remove the tailgate spoiler (see TAILGATE SPOILER TRIM REPLACEMENT).
2. Remove the two screws from the high mount brake light (A).

Fig. 45: Identifying High Mount Brake Light Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (B) from the high mount brake light.
4. Install the light in the reverse order of removal.

BRAKE PEDAL POSITION SWITCH TEST

1. Disconnect the 4P connector (A) from the brake pedal position switch (B).

Fig. 46: Identifying 4P Connector On Brake Pedal Position Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between the No. 1 and No. 2 terminals.
 - There should be continuity when the brake pedal is pressed.
 - There should be no continuity when the brake pedal is released.
3. Check for continuity between the No. 3 and No. 4 terminals.
 - There should be no continuity when the brake pedal is pressed.
 - There should be continuity when the brake pedal is released.
4. If necessary, adjust the pedal height (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**), or replace the switch.

2008-9 ACCESSORIES AND EQUIPMENT**Exterior Trim - MDX****FRONT BULKHEAD COVER REPLACEMENT**

NOTE: Take care not to scratch the front bumper and body.

1. Remove the front bulkhead cover (A).
 1. Remove the clips.
 2. Pass the hood latch knob (B) through the hole in the cover.

Fastener Locations

▷ : Clip, 8

Fig. 1: Identifying Front Bulkhead Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the cover in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

FRONT GRILLE REPLACEMENT**Special Tools Required**

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

GRILLE REPLACEMENT

NOTE: Take care not to scratch the front bumper and body.

1. Remove the front bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**).
2. Remove the front grille (A).
 1. Remove the bolts (B) and clips (C, D).
 2. Release the hooks (E) of the grille from the front bumper (F) by pulling the grille upward.

NOTE: To remove the clips D, pry the inner clip up at the edge near the line (G) on its head.

Fig. 2: Identifying Front Grille Bolts, Clips And Hooks With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the grille in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

TRIM REPLACEMENT

- NOTE:**
- Take care not to scratch the front grille.
 - Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the front grille.
2. Remove the screw. From behind the grille, pry up on the hooks (A) with a trim tool, then remove the front grille trim (B), and the front grille seal (C) from the front grille base (D). The left front grille trim is

shown; the right front grille trim is similar.

Fastener Location

► : Screw, 1

Fig. 3: Identifying Trim Hooks, Grill And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and push the hooks into place securely.

COWL COVER REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the cowl cover and body.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the windshield wiper arms (see **WIPER MOTOR REPLACEMENT**).
2. Using a trim tool, remove the clips (A) from the cowl cover (B).

Fig. 4: Identifying Cowl Cover And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the windshield washer tube (C) from the hooks (D).
4. If necessary, remove the hood rear seal (E) from all of the hooks (F).
5. Pull the cowl cover (A) forward to release the hooks (B, C) of it from the windshield (D) and body. From both hood hinge portions, release the hooks (E, F) of the hood hinge cover (G) from the front fender (H) and the roof molding (I).

Fig. 5: Identifying Cowl Cover, Hooks And Windshield
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the cowl cover.
7. Install the cover in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

A-PILLAR CORNER TRIM REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the trim and body.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Open the front door.
2. Using a trim tool, detach the bottom clip of the A-pillar corner trim (A).

Fastener Location

▷ : Clip, 1

Fig. 6: Identifying Bottom Clip Of A-Pillar Corner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently slide the A-pillar corner trim (A) up along the A-pillar to release it from the clips.

Fastener Locations

▷ : Clip, 2

Fig. 7: Identifying A-Pillar Corner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Using a trim tool, remove the clips from the body.
5. If the clips are damaged or stress-whitened, replace them with new ones.
6. Install the clips (A) on the A-pillar corner trim (B).

Fig. 8: Identifying Clips And A-pillar Corner Trim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Hold the A-pillar corner trim (A) up, and fit the clips into the holes in the body, then push on the trim until the clips snap into place securely.

ROOF RAIL REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

FOR SOME MODELS

NOTE:

- Take care not to scratch the covers, roof rail, and the body.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- When using a flat-tip screwdriver, wrap it with protective tape to prevent damage.

1. Pry up on the front cover (A) with a trim tool to detach the clips and rib (B) from the front bracket (C), then remove the cover by pulling the cover forward.

Fig. 10: Identifying Front Cover And Front Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pry up on the rear cover (A) with a trim tool to detach the clips from the rear bracket (B), then remove the cover by pulling the cover rearward.

Fig. 11: Identifying Rear Cover And Rear Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the roof rail (A) and the center bracket (B).
 1. Using a trim tool, pry the notch (C), then remove the roof rail bar cap (D).
 2. Using a TORX T30 bit, remove the nuts (E) from the front bracket (F) and the rear bracket (G).

3. Using a TORX T30 bit, remove the bolts (H), then remove the roof rail.
4. Remove the center cover (I), and using a TORX T30 bit, remove the nuts (J), then remove the center bracket.

Fig. 12: Identifying Center Cover And Nuts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the roof rail in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

ROOF MOLDING REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

MOLDING REMOVAL

NOTE:

- Put on gloves to protect your hands.
- Take care not to damage the windshield.
- Do not use any metallic tools to remove the windshield portion of the roof molding, or you may chip the edge of the windshield and some cracks in the windshield will occur.

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to bend the roof molding.

1. For some models: Remove the roof rail (see **ROOF RAIL REPLACEMENT**).
2. Detach the bottom clip (A) at the lower corner of the windshield.

Fastener Location

A ▷ : Clip, 1
(Left: Yellow, Right: Pink)

Fig. 13: Identifying Bottom Clip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the windshield portion of the roof molding (A).
 1. Carefully insert the large trim tool (B) and plastic spatula (C) in under the molding next to the lower clip (D).
 2. While pulling the clip portion of the molding up by hand, push each of the eight small hook (E) in numbered sequence shown to release the clip from the clip (F) on the A-pillar. Do not try to pry up the clip if it is hard to release from the clip on the A-pillar.
 3. Gradually work your way up to release each of the upper clips (G, H, I).

Fig. 14: Identifying Windshield Portion Of Roof Molding
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Start from the front to the rear, carefully insert a trim tool in under the roof molding(s) (A) next to each of the clips (B), and pry the molding(s) up to release it with the clip from the stud bolt on the body, then remove the roof portion of the molding(s).

Without roof rail

Fig. 15: Identifying Roof Molding Of Clips (Without Roof Rail)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

With roof rail

Fig. 16: Identifying Roof Molding Of Clips (With Roof Rail)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check if the clips are damaged or stress-whitened, and if necessary, replace them with new ones.

MOLDING INSTALLATION

1. Install the clips (A, B, C, D, E, F) on the roof molding(s) (G).

Without roof rail

Fig. 17: Identifying Clips On Roof Molding (Without Roof Rail)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

With roof rail

Fig. 18: Identifying Clips On Roof Molding (With Roof Rail)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the roof molding(s) (A).
 1. Hold the roof molding(s) up on the roof, and align each clip to the stud bolts.
 2. From the rear to the front, fit the clips (B) to the stud bolts (C), then push on the molding until they

snap into place.

3. From the top to the bottom, push the clips (D) in the windshield portion of the roof molding until they snap into place to the clip (E) on the A-pillar.
4. Push the bottom clip (F) to the front fender into place.
5. Set the hook(G) of the hood hinge cover (H).

Without roof rail

Fig. 19: Identifying Roof Molding (Without Roof Rail)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

With roof rail

Fig. 20: Identifying Roof Molding (With Roof Rail)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push the clip portions into place securely and reinstall the roof rail (see **ROOF RAIL REPLACEMENT**), if equipped.

BODY SIDE CLIP REPLACEMENT

1. Gradually scrape off the adhesive tape (A) under the clips (B) while heating it with a heat gun to 212-248°F (100-120°C).

NOTE:

- To prevent damage, do not heat the painted surface around the clips too much.
- To keep the exterior resin parts near the A-pillar from being overheated by the heat gun, wrap them with aluminum foil.

Fig. 21: Identifying Adhesive Tape Under Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Clean the body bonding surface with a sponge dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
3. Install the clips (A).
 1. Peel the adhesive backing away from the clips.
 2. Line up the clips with the alignment marks (B) on the body, and attach the clips with adhesive tape (C).
 3. Apply two-part epoxy adhesive (D) around the edge of the clips as shown.

Adhesive tape: Thickness 1 mm (0.04 in.)

Width 8 mm (0.32 in.)

Fig. 22: Identifying Alignment Marks, Adhesive Tape And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SIDE SILL PANEL REPLACEMENT

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE: **Take care not to scratch the body.**

1. Open the front door and rear door.
2. Remove the side sill panel (A).
 1. Remove the screws (B) then remove the splash guard (C).
 2. Remove the screw (D) fastening the rear fender cover (E) and the rear strake (F).
 3. Use the trim tool to pry out the front clip (G), then release the front of the side sill panel from the body.
 4. While pulling the front portion of the side sill panel away from the body, slide the panel forward and remove it.

The side clips (H) will stay in the body.

5. Remove the side clips by turning them 45 °.

Fig. 23: Identifying Side Sill Panel Screws

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the clips are damaged or stress-whitened, replace them with new ones.
4. Install the side clips on the side sill panel.
5. Hold the panel up, and fit the front clip and all the side clips into the holes in the body, then push on the panel until the side clips snap into place.
6. Reinstall the front inner fender and front splash guard.

TAILGATE SPOILER TRIM REPLACEMENT

NOTE: Take care not to scratch the tailgate and body.

1. Open the tailgate. Disconnect the rear window washer tube (A). Remove the radio antenna connector grommet (B) from the tailgate, and disconnect the radio antenna connector (C).

Fig. 24: Identifying Connector Grommet, Washer Tube And Radio Antenna Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the access cap (A) from the tailgate, and remove the nuts (B) and bolts (C) securing the tailgate spoiler trim.

Fastener Locations

B ● : Nut, 3 C ► : Bolt, 2

Fig. 25: Identifying Access Cap, Tailgate, Nuts And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently close the tailgate, and lift up on the tailgate spoiler trim (A) to detach the clips.

Fig. 26: Identifying Tailgate Spoiler Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the high mount brake light connector grommet (B) from the tailgate, and disconnect the high mount brake light connector (C), then remove the tailgate spoiler trim.
5. If necessary, remove damaged spacer (A) and damaged pad rubbers (B, C) from the tailgate spoiler trim (D). Clean the trim surface with a sponge dampened in alcohol, then attach new pares to the trim.

Fig. 27: Identifying Spacer, Damaged Pad Rubbers And Tailgate Spoiler Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trim in the reverse order of removal, and note these items:
 - Make sure the radio antenna connector and high mount brake light connector are plugged in properly and the rear window washer tube is connected properly.
 - Make sure the radio antenna connector grommet and high mount brake light connector grommet are installed securely.
 - If the clips are damaged or stress-whitened, replace them with new ones.

- Push the clips into place securely.

REAR LICENSE TRIM REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the tailgate.

1. With navigation system: Remove the tailgate lower trim panel (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
2. With navigation system: From inside the tailgate, disconnect the rearview camera connector (A).

Fig. 28: Identifying Rearview Camera Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws, and release both ends of the rear license trim (A) from the inner taillights (B), then remove the trim. If equipped, pull the rearview camera harness (C) out.

Without navigation system

Fig. 29: Identifying Rear License Trim And Inner Taillights (Without Navigation System)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With navigation system

Fig. 30: Identifying Rear License Trim And Inner Taillights (With Navigation System)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screw grommets (A) from the tailgate.

NOTE:

- If the screw grommets cracked excessively, replace them with new ones.
- If the screw grommets are damaged or stress-whitened, replace them with new ones.
- If a new rear license trim will be installed, remove all of remaining screw grommets on the tailgate and discard them. The screw grommets have been installed to the new rear license trim with screws.

Fig. 31: Identifying Screw Grommets
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the trim in the reverse order of removal, and note these items:

- With navigation system: Make sure the rearview camera connector is plugged in properly.
- If a new rear license trim assembly (A) is to be installed, hold the trim up, and fit all the screw grommets (B) into the holes in the tailgate, then push on the trim until the grommets snap into place.

New rear license trim installation

Fig. 32: Identifying Rear License Trim Assembly

REAR GUTTER COVER REPLACEMENT**Special Tools Required**

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the body.

1. Open the tailgate.
2. Separate the double-sided adhesive tape (A), and use a trim tool to detach the clip (B) and pins (C) of the rear gutter cover (D).

Without power tailgate

Fig. 33: Identifying Double-Sided Adhesive Tape, Clip And Pins (Without Power Tailgate)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

With power tailgate

Fig. 34: Identifying Double-Sided Adhesive Tape, Clip And Pins (With Power Tailgate)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the clip and grommets (E, F) are damaged or stress-whitened, replace them with new ones.
4. Install the rear gutter cover in the reverse order of removal, and note these items:
 - Scrape off the remaining double-sided adhesive tape from the cover and body, then clean the cover and body surface with a sponge dampened in alcohol.
 - Apply new adhesive tape (A) to the rear gutter cover (B).
 - Push the adhesive portions, clips, and pins into place securely.

Adhesive tape: Thickness 1.5 mm (0.06 in.)

Width 12 mm (0.47 in.)

Length 50 mm (2.0 in.)

Without power tailgate

EMBLEM/STICKER REPLACEMENT

NOTE: When removing the emblems, take care not to scratch the body.

1. To remove the front "A" emblem, remove the front grille (see **FRONT GRILLE REPLACEMENT**).
2. Clean the body surface with a sponge dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
3. Apply the emblems where shown.
 - ACURA/MDX emblems: Remove the adhesive backing. Put the ACURA/MDX emblems with the

2008 Acura MDX

2008-9 ACCESSORIES AND EQUIPMENT Exterior Trim - MDX

application guide foam on the tailgate as shown, then press the emblem into place. Remove the film and application guide foam.

- When installing the ULEV sticker on the inside surface of the left quarter glass, align the sticker with the edge of the black ceramic as shown, then press the sticker into place, and remove the application tape.

Fig. 37: Emblem And Sticker Chart

2007-09 ACCESSORIES AND EQUIPMENT

Fenderwell - MDX

FRONT INNER FENDER REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the body.

1. Remove the front inner fender (A).
 1. On the back of the wheel arch, remove the screws (B), then remove the splash guard (C).
 2. From under the front bumper (D), remove the bolt (E) and clips (F) securing the front bumper and front inner fender.
 3. From the wheel arch, remove the screw (G) securing the front bumper.
 4. From the wheel arch, remove the clip (H) securing the front splash shield (I) and front inner fender, and remove the clips (J) securing the front inner fender on the body.
 5. Pull out the front inner fender.

Fastener Locations

2. Install the inner fender in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

SPLASH SHIELD REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the body.

1. Remove the splash shield (A).
 1. Remove the clips (B) that secure the front inner fender (C) and splash shield.
 2. From under the front bumper (D), remove the clips (E).
 3. From under the body, remove the clips (F) that secure the front undercover (G) and splash shield, and remove the clips (H) that secure the splash shield on the front suspension subframe (I).
 4. Pull the splash shield out.

Fastener Locations

2. Install the splash shield in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

FRONT UNDERCOVER REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the body.

1. Remove the bolts (A), and clips (B), then remove the front undercover (C) from the splash shield (D), front suspension subframe (E), and front subframe stiffener (F).

Fig. 3: Identifying Front Undercover Bolts And Clips With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the undercover in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

FRONT STRAKE REPLACEMENT

NOTE:

Take care not to scratch the body.

1. Remove the bolts, then remove the front strake (A) from the front inner fender (B).

Fastener Locations

▶ : Bolt, 3

Fig. 4: Identifying Front Strake Of Front Inner Fender With Torque Specification

2. Install the strake in the reverse order of removal.

FRONT FENDER FAIRING REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the body.

1. Remove the front inner fender as needed (see **FRONT INNER FENDER REPLACEMENT**).
2. Pull out and remove the front fender fairing (A).

Fig. 5: Identifying Front Fender Fairing

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the fender fairing in the reverse order of removal.

LEFT FRONT SPLASH GUARD REINFORCEMENT REPLACEMENT

1. Remove these items:
 - Left front inner fender, as needed (see **FRONT INNER FENDER REPLACEMENT**)
 - Left side sill panel (see **SIDE SILL PANEL REPLACEMENT**)
2. Remove the bolts, then remove the left front splash guard reinforcement (A). Take care not to scratch the body.

REAR FENDER COVER REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the body and related parts.

1. Remove the rear fender cover (A).
 1. Remove the screw (B) that secure the fender cover and the rear strake (C) from the front of the rear wheel arch.
 2. Remove the screws (D, E) and clip (F) that secure the rear bumper (G) and fender cover from the rear of the rear wheel arch.
 3. Remove the bolts (H) and clip(s) (I) from the rear wheel arch.
 4. Pull out the rear fender cover.

REAR WHEELHOUSE GUSSET REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the body and related parts.

1. Remove these items:

- Rear side trim panel (see TRIM REMOVAL/INSTALLATION - REAR SIDE AREA)
- Third row seat (see THIRD ROW SEAT REMOVAL/INSTALLATION)

2. Pull the carpet back as needed.

3. Remove the rear wheelhouse gusset (A).

1. Remove the ground bolt (B) and release the harness clip (C).
2. Remove the bolts (D).
3. From outside the vehicle, remove the nuts (E).

Fig. 3: Identifying Rear Wheelhouse Gusset, Harness Clip, Bolts And Nuts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the gusset in the reverse order of removal.

CARGO LID SUPPORT REPLACEMENT

NOTE:

- Put on gloves to protect your hands.
- Take care not to scratch the body and related parts.

1. Remove these items:

- Rear side trim panel, both sides (see TRIM REMOVAL/INSTALLATION - REAR SIDE AREA)
- Rear side trim panel support bracket (see step 11 on REAR SIDE TRIM PANEL REMOVAL/INSTALLATION)
- Cargo rear trim panel (see TRIM REMOVAL/INSTALLATION - CARGO AREA)
- XM receiver (see ACURALINK CONTROL UNIT (XM RECEIVER) REMOVAL/INSTALLATION)
- Active damper control unit (see ACTIVE DAMPER CONTROL UNIT REPLACEMENT)

2. Remove the clips fastening the rear differential breather box (see REAR DIFFERENTIAL BREATHER BOX AND HOSE REPLACEMENT).

3. Remove the bolts, then remove the cargo lid support (A)

Fastener Locations

► : Bolt, 5

Fig. 4: Identifying Cargo Lid Support And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the support in the reverse order of removal.

SUBFRAME REPLACEMENT

FRONT SUBFRAME TORQUE

After removing the subframe mounting bolts and front subframe stiffener mounting bolts, be sure to replace them with new ones.

Fig. 5: Exploded View Of Subframe With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SUBFRAME ALIGNMENT

NOTE:

- After mounting the subframe and brackets loosely, align all of the installation reference holes in the subframe, in the subframe front bracket, and in the body using a screwdriver or tapered punch as a guide, then tighten the bolts.
- After reinstalling all removed parts, check and adjust the front wheel alignment (see WHEEL ALIGNMENT).

Fig. 6: Exploded View Of Front Subframe
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SUBFRAME TORQUE

NOTE:

- When installing, align both installation reference holes in the subframe with the reference holes in the body using a screwdriver or tapered punch as a guide.
- After removing the subframe mounting bolts, be sure to replace them with new ones.

2007-09 SUSPENSION

Front Suspension - MDX

KNUCKLE/HUB BEARING UNIT REPLACEMENT

EXPLODED VIEW

Fig. 1: Exploded View Of Knuckle/Hub Bearing Unit With Torque Specifications
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Ball joint remover, 32 mm 07MAC-SL0A102
- Ball joint remover, 28 mm 07MAC-SLOA202
- Ball joint thread protector, 14 mm 071AF-S3VA000

HUB BEARING UNIT REPLACEMENT

1. Raise the front of "the vehicle, and support it with safety stands in the proper locations (see LIFT AND SUPPORT POINTS).
2. Remove the wheel nuts (A) and the front wheel.

Fig. 2: Identifying Wheel Nuts And Front Wheel With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the brake hose mounting bolt (A) from the damper.

Fig. 3: Identifying Brake Hosing Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the brake caliper bracket mounting bolts (B), then remove the caliper assembly (C) from the

knuckle. To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage. Do not twist the brake hose excessively.

5. Raise the stake (A), then remove the spindle nut (B).

Fig. 4: Identifying Spindle Nut With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the brake disc (see **FRONT BRAKE DISC REPLACEMENT**).
7. Remove the hub bearing unit (A) and the splash guard (B) from the knuckle.

NOTE:

- Do not pull the driveshaft end outward. The driveshaft inboard joint may come apart.
- During installation, apply grease to the mating surfaces of the hub bearing unit and driveshaft outboard joint (see **FRONT DRIVESHAFT INSTALLATION**).

Fig. 5: Identifying Hub Bearing Unit And Splash Guard From Knuckle

With Torque Specification**Courtesy of AMERICAN HONDA MOTOR CO., INC.**

8. Check the hub bearing unit for damage and cracks.
9. Install the hub bearing unit in the reverse order of removal, and note these items:
 - Use the new spindle nut during reassembly.
 - Before installing the spindle nut, apply a small amount of engine oil to the seating surface of the nut. After tightening, use a drift to stake the spindle nut shoulder against the driveshaft.
 - Before installing the brake disc, clean the mating surfaces of the hub bearing unit and the inside of the brake disc.
 - Before installing the wheel, clean the mating surfaces of the brake disc and the inside of the wheel.
 - Check the wheel alignment, and adjust it if necessary (see **WHEEL ALIGNMENT**).

KNUCKLE REPLACEMENT

1. Remove the hub bearing unit.
2. Remove the wheel speed sensor (A) from the knuckle (B). Do not disconnect the wheel speed sensor connector.

Fig. 6: Identifying Wheel Speed Sensor From Knuckle With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the cotter pin (A) from the tie-rod end ball joint, then remove the nut (B).

NOTE: During installation, install the new cotter pin after tightening the nut, and bend its end as shown.

Fig. 7: Identifying Tie-Rod End Ball Joint From Knuckle With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the tie-rod end ball joint from the knuckle using the ball joint remover (see **BALL JOINT REMOVAL**).
5. Remove the lock pin (A) from the lower arm ball joint, then remove the castle nut (B).

NOTE: During installation, install the lock pin as shown after tightening the new castle nut.

Fig. 8: Identifying Lower Arm Ball Joint From Knuckle With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the lower arm ball joint from the knuckle using the ball joint thread protector, and the ball joint remover (see **BALL JOINT REMOVAL**).
7. Remove the damper pinch bolts (A) and flange nuts (B) from the damper, then remove the knuckle (C).

NOTE: During installation, install new damper pinch bolts and new flange nuts.

Fig. 9: Identifying Damper Pinch Bolts And Flange Nuts From Damper With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the knuckle in the reverse order of removal, and note these items:
 - First install all the components, and lightly tighten the bolts and nuts, then raise the suspension to load it with the vehicle's weight before fully tightening to the specified torque values.
 - Be careful not to damage the ball joint boot when connecting the knuckle.
 - Before connecting the lower arm ball joint to the knuckle, degrease the threaded section and tapered portion of the ball joint pin, the ball joint connecting hole, the threaded section and mating surfaces of the castle nut.
 - Torque the castle nut to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the castle nut by loosening it.
 - Before installing the wheel, clean the mating surfaces of the brake disc and the inside of the wheel.
 - Check the wheel alignment, and adjust it if necessary (see WHEEL ALIGNMENT).

BALL JOINT BOOT REPLACEMENT

Special Tools Required

Hub dis/assembly tool, 42 mm 07GAF-SD40200

1. Remove the lower arm (see LOWER ARM REMOVAL/INSTALLATION).
2. Remove the boot.
3. Pack the interior and lip (A) of a new boot with grease. Keep the grease off of the boot-to-lower arm mating surfaces (B).

Fig. 10: Identifying Grease Applying Area

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Wipe the grease off the tapered portion of the ball joint pin (C), and pack fresh grease into the base (D). Do not let dirt or other foreign materials get into the boot.
5. Install the boot on the ball joint, then squeeze it gently to force out any air.
6. Press the boot with the hub dis/assembly tool until the bottom seats on the lower arm (A) all the way around.

Fig. 11: Identifying Boot With Hub Dis/Assembly Tool

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. After installing a boot, wipe any grease off the exposed portion of the ball joint pin.
8. Install the lower arm (see LOWER ARM REMOVAL/INSTALLATION).

LOWER ARM REMOVAL/INSTALLATION

Special Tools Required

- Ball joint remover, 32 mm 07MAC-SL0A102
- Ball joint thread protector, 14 mm 071AF-S3VA000

REMOVAL/INSTALLATION

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheel.
3. With active damper system: Remove the suspension stroke sensor (A) from the lower arm (B).

NOTE: Use the new nut during reassembly.

Fig. 12: Identifying Suspension Stroke Sensor From Lower Arm With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the lock pin (A) from the lower arm ball joint, then remove the castle nut (B).

NOTE: During installation, install the lock pin as shown after tightening the new castle nut.

Fig. 13: Identifying Lower Arm Ball Joint From Knuckle With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the lower arm ball joint from the knuckle using the ball joint thread protector and the ball joint remover (see **BALL JOINT REMOVAL**).
6. Remove the stabilizer bar bushing holder mounting bolt (A).

NOTE: During installation, install the mounting bolt after tightening the lower arm mounting 14 mm bolts to the specified torque value.

Fig. 14: Identifying Stabilizer Bar Bushing Holder Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the lower arm mounting 14 mm and 16 mm bolts, then remove the lower arm (B) from the front suspension subframe.

NOTE: Use the new mounting bolts during reassembly.

8. Remove the lower arm stops (A).

NOTE: During installation, align the slot (B) on the lower arm stop with the lug portion (C) on the front side of lower arm bushing.

Fig. 15: Identifying Lower Arm Stops

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the lower arm in the reverse order of removal, and note these items:
 - First install all the components, and lightly tighten the bolts and nuts, then raise the suspension to load it with the vehicle's weight before fully tightening to the specified torque values.
 - Be careful not to damage the ball joint boot when connecting the knuckle.
 - Before connecting the lower arm ball joint to the knuckle, degrease the threaded section and tapered portion of the ball joint pin, the ball joint connecting hole, the threaded section and mating surfaces of the castle nut.
 - Torque the castle nut to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole. Do not align the castle nut by loosening it.
 - Before installing the wheel, clean the mating surfaces of the brake disc and the inside of the wheel.
 - Check the wheel alignment, and adjust it if necessary (see **WHEEL ALIGNMENT**).
10. With active damper system/Left side: Do the headlight initial position learning procedure (see **HEADLIGHT INITIAL POSITION LEARNING PROCEDURE**).

BUSHING REPLACEMENT

1. Remove the self-locking nut (A), then remove the rear side of lower arm bushing with bracket (B).

Fig. 16: Identifying Lower Arm Bushing With Bracket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Align the angle of the lower arm center line (A) and the under edge line (B) of the bushing bracket.

Fig. 17: Identifying Angle Of Lower Arm Center Line And Under Edge Line With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Install a new self-locking nut (C), then tighten the nut to the specified torque value.

STABILIZER LINK REMOVAL/INSTALLATION

- Raise the front of the vehicle, and support it with safety stands in the proper locations (see LIFT AND SUPPORT POINTS).
- Remove the front wheel.
- Remove the flange nuts (A) while holding the respective joint pin (B) with a hex wrench (C), then remove the stabilizer link (D).

Fig. 18: Identifying Respective Joint Pin With Hex Wrench With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the stabilizer link on the stabilizer bar (E) and the damper (F) with the joint pins set at the center of their range of movement.
5. Install the flange nuts, and lightly tighten them.
6. Place a jack under the lower arm, and raise the suspension to load it with the vehicle's weight.
7. Tighten the flange nuts to the specified torque value while holding the respective joint pin with a hex wrench.
8. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheel.
9. Test-drive the vehicle.

STABILIZER BAR REPLACEMENT

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Disconnect both stabilizer links from the stabilizer bar (see **STABILIZER LINK REMOVAL/INSTALLATION**).
4. Remove the flange bolts (A) and the bushing holders (B), then remove the bushings (C) and the stabilizer bar (D) from the front suspension subframe (E).

Fig. 19: Identifying Bushings And Stabilizer Bar With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the stabilizer bar in the reverse order of removal, and note these items:
 - Note the right and left direction of the stabilizer bar.
 - Align the paint marks (F) on the stabilizer bar with the sides of the bushings.
 - Note the direction of installation for the bushings.
 - Refer to the **STABILIZER LINK REMOVAL/INSTALLATION** to connect the stabilizer bar to the links .
 - Before installing the wheel, clean the mating surfaces of the brake disc and the inside of the wheel.

- Check the wheel alignment, and adjust it if necessary (see WHEEL ALIGNMENT).

DAMPER/SPRING REMOVAL AND INSTALLATION

NOTE: Except where called out, the illustrations show without active damper system.

REMOVAL

1. Raise the front of the vehicle, and support it with safety stands in the proper locations (see LIFT AND SUPPORT POINTS).
2. Remove the front wheel.
3. With active damper system: Disconnect the damper coil connector (A), and remove the flange bolt (B), and the harness clip (C).

NOTE: Be careful not to damage or contaminate the damper coil connector.

Fig. 20: Identifying Damper Coil Connector With Flange Bolt And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the wheel speed sensor harness (A) and the brake hose (B) from the damper (C). Do not disconnect the wheel speed sensor connector.

Fig. 21: Identifying Wheel Speed Sensor Harness And Brake Hose From Damper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the flange nut (A), while holding the joint pin (B) with a hex wrench (C), and disconnect the stabilizer link (D) from the damper.

Fig. 22: Identifying Flange Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the damper pinch bolts (A) and flange nuts (B) from the damper.

Fig. 23: Identifying Damper Pinch Bolts And Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the cover (A) and the service caps (B).

Fig. 24: Identifying Cover And Service Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the flange nuts (C) from the top of the damper.
9. Remove the damper assembly (D).

NOTE:

- The damper springs are different, left and right. Mark the springs L and R before you continue.
- Be careful not to damage the body.

INSTALLATION

1. Install the damper assembly (A) on to the frame. Note the direction of the damper mounting base as shown.

NOTE:

Be careful not to damage the body.

Fig. 25: Identifying Damper Assembly On Frame With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Loosely install the new flange nuts (B) to the top of the damper.

NOTE: Install the cover (C) and the service caps (D) after tightening the flange nuts to the specified torque value.

- Loosely install new damper pinch bolts (A) and new flange nuts (B) to the damper (C).

Fig. 26: Identifying Damper Pinch Bolts With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the stabilizer link (A) to the damper (B), and loosely install a new flange nut (C).

Fig. 27: Identifying Stabilizer Link To Damper With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the front suspension with a floor jack to load the suspension with the vehicle's weight.
6. Tighten the flange nut to the specified torque value, while holding the joint pin (D) with the hex wrench (E)
7. Tighten the flange nuts on top of the damper to the specified torque value.
8. Tighten the damper pinch bolts and the flange nuts to the specified torque value.
9. Install the cover and the service caps.
10. Install the wheel speed sensor harness (A) and the brake hose (B) to the damper (C).

Fig. 28: Identifying Wheel Speed Sensor Harness And Brake Hose With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. With active damper system: Connect the damper coil connector (A), and install the flange bolt (B), and the harness clip (C).

NOTE: Be careful not to damage or contaminate the damper coil connector.

Fig. 29: Identifying Damper Coil Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Clean the mating surfaces of the brake disc and the inside of the wheel, then install the front wheel.
13. With active damper system: Start the engine, then make sure there are no active damper system DTCs with the HDS (see **INTERMITTENT FAILURES**).
14. With active damper system: Do the DAMPER FORCE OPERATION in the ACTIVE DAMPER SYSTEM INSPECTION MENU with the HDS, then make sure the all four damper units function normally.
15. Check the wheel alignment, and adjust it if necessary (see **WHEEL ALIGNMENT**).

DAMPER/SPRING DISASSEMBLY, INSPECTION, AND REASSEMBLY

EXPLODED VIEW-WITHOUT ACTIVE DAMPER SYSTEM

Fig. 30: Exploded View Of Damper/Spring (Without Active Damper System) With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXPLODED VIEW-WITH ACTIVE DAMPER SYSTEM

2008 Acura MDX

2007-09 SUSPENSION Front Suspension - MDX

Fig. 31: Exploded View Of Damper/Spring (With Active Damper System) With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- When compressing the damper spring, use a commercially available strut spring compressor (Branick MST-580A or Model 7200, or equivalent) according to the manufacturer's instructions.
- Except where called out, the illustrations are shown without active damper system.

DISASSEMBLY

1. Compress the damper spring, then remove the self-locking nut (A) while holding the damper shaft with a hex wrench or TORX wrench (B). Do not compress the damper spring more than necessary to remove the nut.

Fig. 32: Identifying Self-Locking Nut

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the pressure from the strut spring compressor, then disassemble the damper as shown in the Exploded View.

INSPECTION

1. Reassemble the damper mounting base, the damper mounting washer, and the self-locking nut.
2. Compress the damper assembly by hand, and check for smooth operation through a full stroke, both compression and extension. The damper should extend smoothly and constantly when compression is released. If it does not, the gas is leaking and the damper should be replaced.

Fig. 33: Compressing Damper Assembly By Hand

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for oil leaks, abnormal noises, and binding during these tests.

REASSEMBLY

1. Install the damper spring (A) on the upper spring mounting cushion (B), then align the upper end (C) of the damper spring with the cushion stop (D) or the cushion end (E).

Without active damper system

Fig. 34: Identifying Damper Spring On Upper Spring Mounting Cushion (Without Active Damper Spring System)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

With active damper system

Fig. 35: Identifying Damper Spring On Upper Spring Mounting Cushion (With Active Damper Spring System)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Compress the damper spring.
3. Install the tab (A) on the lower spring seat (B) in the locating hole (C) on the damper unit (D).

Without active damper system

Fig. 36: Identifying Tab On Lower Spring Seat In Locating Hole (Without Active Damper Spring System)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

With active damper system

Fig. 37: Identifying Tab On Lower Spring Seat In Locating Hole (With Active Damper Spring System)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Align the lower end (E) of the damper spring with the stepped part (F) of the lower spring seat.
5. Install all the parts except the damper mounting washer and self-locking nut onto the damper unit (A) by referring to the **EXPLODED VIEW**.

Fig. 38: Identifying Damper Unit

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Align the angle of the stud bolt (A) on the damper mounting base (B) and the damper bracket (C) as shown.

Without active damper system

With active damper system

Fig. 39: Identifying Damper Mounting Base And Damper Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the damper mounting washer (A) and a new self-locking nut (B).

Fig. 40: Identifying Damper Mounting Washer And Self-Locking Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Hold the damper shaft (C) using a hex wrench or TORX wrench (D), and tighten the self-locking nut to the specified torque value.

GENERAL TROUBLESHOOTING INFORMATION

INTERMITTENT FAILURES

The term "intermittent failure" means a system may have had a failure, but it checks OK now. If the

malfunction indicator lamp (MIL) on the dash does not come on, check for poor connections or loose pins at all connectors related to the circuit that you are troubleshooting. If the MIL was on but then went out, the original problem may have been intermittent.

SERVICE INFORMATION

Some DTCs or symptoms can be caused by a combination of PCM software and specific driving habits. Periodically, new PCM software or new service procedures may become available. Always check on-line for the latest software or service information related to the DTCs or symptoms you are troubleshooting.

OPENS AND SHORTS

"Open" and "short" are common electrical terms. An open is a break in a wire or at a connection. A short is an accidental connection of a wire to ground or to another wire. In simple electronics, this usually means something won't work at all. With complex electronics (such as PCMs) this can sometimes mean something works, but not the way it's supposed to.

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

If the MIL (malfunction indicator lamp) has come on

1. Start the engine, and check the MIL (A).

NOTE: If the ignition switch is turned ON (II), and the engine is not started, the MIL stays on for 15-20 seconds (see HOW TO SET READINESS CODES).

Fig. 2: Identifying Malfunction Indicator Lamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the MIL stays on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 3: Connecting HDS To DLC

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch ON (II).
4. Make sure the HDS communicates with the PCM and other vehicle systems. If it doesn't, go to DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Check the diagnostic trouble code (DTC) and note it. Also check the freeze data and/or on-board snapshot data, and download any data found. Then refer to the indicated DTCs troubleshooting, and begin the appropriate troubleshooting procedure.

NOTE:

- Freeze data indicates the engine conditions when the first system malfunction, misfire, or fuel trim malfunction that activated the MIL was detected.
- The HDS can read the DTCs, freeze data, on-board snapshot, current data, and other powertrain control module (PCM) data.
- For specific operations, refer to the user's manual that came with the HDS.

6. If no DTCs are found, go to MIL circuit troubleshooting (see **MIL CIRCUIT TROUBLESHOOTING**).

If the MIL did not stay on

If the MIL did not stay on but there is a driveability problem, do the symptom troubleshooting.

If you can't duplicate the DTC

Some of the troubleshooting requires you to reset the PCM and try to duplicate the DTC. If the problem is intermittent and you can't duplicate the code, do not continue through the procedure. To do so will only result in confusion and possibly, a needlessly replaced PCM.

HDS CLEAR COMMAND

The PCM stores various specific data to correct the system even if there is no electrical power such as when the

battery negative terminal is disconnected. Stored data based on failed parts should be cleared by using the "CLEAR COMMAND" of the HDS, if parts are replaced.

The HDS has three kinds of clear commands to meet this purpose. They are DTC clear, PCM reset, and crank (CKP) pattern clear. DTC clear command erases all stored DTC codes, freeze data, on-board snapshot, and readiness codes. This must be done with the HDS after reproducing the DTC during troubleshooting.

The PCM reset command erases all stored DTC codes, freeze data, on-board snapshot, readiness codes, and all specific data to correct the system except crank (CKP) pattern. If the crank (CKP) pattern data in the PCM was cleared, you must do the crank (CKP) pattern learn procedure. The crank (CKP) pattern clear command erases only crank (CKP) pattern data. This command is for repair of a misfire or the CKP sensor.

SCAN TOOL CLEAR COMMAND

If you are using a generic scan tool to clear commands, be aware that there is only one setting for clearing the PCM, and it clears all commands at the same time (crank (CKP) pattern learn, idle learn, readiness codes, freeze data, on-board snapshot, and DTCs). After you clear all commands, you then need to do these procedures, in this order: PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**); crank (CKP) pattern learn procedure; Test-drive to set readiness codes to complete (see **HOW TO SET READINESS CODES**).

DTC CLEAR

1. Clear the DTC with the HDS while the engine is stopped.
2. Turn the ignition switch OFF.
3. Turn the ignition switch ON (II), and wait 30 seconds.
4. Turn the ignition switch OFF, and disconnect the HDS from the DLC.

PCM RESET

1. Reset the PCM with the HDS while the engine is stopped.
2. Turn the ignition switch OFF.
3. Turn the ignition switch ON (II), and wait 30 seconds.
4. Turn the ignition switch OFF, and disconnect the HDS from the DLC.
5. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).

CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN

Clear/Learn Procedure (with the HDS)

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 4: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
5. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.

Learn Procedure (without the HDS)

1. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on.
2. Test-drive the vehicle on a level road: Decelerate (with the throttle fully closed) from an engine speed of 2,500 rpm down to 1,000 rpm with the transmission in D position.
3. Test-drive the vehicle on a level road: Decelerate (with the throttle fully closed) from an engine speed of 5,000 rpm down to 3,000 rpm with the transmission in D position.
4. Repeat step 2 and 3 several times.
5. Turn the ignition switch OFF.
6. Turn the ignition switch ON (II), and wait 30 seconds.

How to End a Troubleshooting Session (required after any troubleshooting)

1. Reset the PCM with the HDS.
2. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
3. Turn the ignition switch OFF.
4. Disconnect the HDS from the DLC.

NOTE: **The PCM is part of the immobilizer system. If you replace the PCM, it will have a different immobilizer code. In order for the engine to start, you**

must rewrite the immobilizer code with the HDS (IMMOBILIZER SYSTEM--MDX article).

HOW TO TROUBLESHOOT CIRCUITS AT THE PCM CONNECTORS

NOTE:

- The PCM overwrites data and monitors the EVAP system for up to about 40 minutes after the ignition switch is turned OFF. Jumping the SCS line after turning the ignition switch OFF cancels this function. Disconnecting the PCM during this function, without jumping the SCS line first, can damage the PCM.
- PCM connectors A, B, and C have symbols (A= $\square$ B= Δ , C= $\circ$) embossed on them for identification.

1. Jump the SCS line with the HDS.
2. Remove the bracket (D), then free the A/C discharge line (E) from the clip (F) and remove the A/C suction line mounting bracket bolt (G).

Fig. 5: Identifying A/C Discharge Line, Bracket And A/C Suction Line Mounting Bracket Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the cover (H), then disconnect the PCM connector A, B, and C.
4. When diagnosis/troubleshooting is made at the PCM connector, use the measurement hole (A) above the terminal you need to check.

Fig. 6: Identifying Measurement Hole

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect one side of the patch cord (A) terminals to a commercially available digital multimeter (B), and connect the other side of the patch cord terminals to a commercially available banana jack (Pomona Electronics Tool No. 3563 or equivalent) (C).

Fig. 7: Connecting Side Of Patch Cord Terminals To Digital Multimeter

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Gently contact the pin probe (male) at the terminal test port from the terminal side. Do not force the tips into the terminals.

NOTE:

- For accurate results, always use the pin probe (male).
- To prevent damage to the connector terminals, do not insert test equipment probes, paper clips, or other substitutes as they can damage the terminals. Damaged terminals cause a poor connection and an incorrect measurement.
- Do not puncture the insulation on a wire. Punctures can cause poor or intermittent electrical connections.

SUBSTITUTING THE PCM

Special Tools Required

- Honda diagnostic system (HDS) tablet tester

- Honda interface module (HIM) and an iN workstation with HDS and CM update software
- HDS pocket tester
- GNA600 and an iN workstation with HDS and CM update software

NOTE: **Use this procedure when you need to substitute a known-good PCM during troubleshooting procedures.**

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 8: Connecting HDS To DLC

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**). If you are returning from DLC circuit troubleshooting, skip step 4 to 5, then clean the throttle body after substituting the PCM (see **THROTTLE BODY CLEANING**).
4. USA, Canada models: Select the INSPECTION MENU with the HDS.
5. USA, Canada models: Select the ETCS TEST, then select the TP POSITION CHECK, and follow the screen prompts.

NOTE: **USA, Canada models: If the TP POSITION CHECK indicates FAILED, continue this procedure.**

6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Remove the bracket (D), then free the A/C discharge line (E) from the clip (F) and remove the A/C suction line mounting bracket bolt (G).

Fig. 9: Identifying A/C Discharge Line, Clip, Bracket And A/C Suction Line Mounting Bracket Bolt With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the cover (H), then disconnect the PCM connectors A, B, and C.

NOTE: PCM connectors A, B, and C have symbols (A= $\square$, B= Δ , C= $\circ$) embossed on them for identification.

10. Remove the bolts (I), then remove the PCM (J).
11. Install the parts in the reverse order of removal.
12. Open the SCS with the HDS.
13. Turn the ignition switch ON (II).

NOTE: USA, Canada models: DTC P0630 "VIN Not Programmed or Mismatch" may be stored because the VIN has not been programmed into the PCM; ignore it, and continue this procedure.

14. USA, Canada models: Manually input the VIN to the PCM with the HDS.
15. Update the PCM if it does not have the latest software.
16. Select the IMMOBI SYSTEM with the HDS.
17. Enter the immobilizer code with the PCM replacement procedure in the HDS; it allows you to start the engine.
18. Reset the PCM with the HDS.
19. USA, Canada models: If the TP POSITION CHECK failed in step 6, clean the throttle body (see

THROTTLE BODY CLEANING).

20. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
21. Do the CKP pattern learn procedure.

OBD STATUS

The OBD status shows the current system status of each DTC and all of the parameters. This function is used to see if the repair was successfully completed. The results of diagnostic tests for the DTC are displayed as:

- **PASSED:** The on board diagnosis is successfully finished.
- **FAILED:** The on board diagnosis has finished but failed.
- **EXECUTING:** The vehicle is in enable criteria conditions for the DTC and the on board diagnosis is running.
- **NOT COMPLETED:** The on board diagnosis was running but is out of the enable conditions for the DTC.
- **OUT OF CONDITION:** The vehicle has stayed out of the enable conditions for the DTC.

DTC TROUBLESHOOTING INDEX

Mismatch

- (1) The above following DTCs are indicated when the PGM-FI system is selected in the HDS. Some automatic transmission DTCs cause the MIL to come on. If the MIL is on and no DTCs are indicated in the PGM-FI system, select the A/T system, and check for automatic transmission DTCs.
- (2) These DTCs are indicated by a blinking MIL when the SCS line is jumped with the HDS.

SYMPTOM TROUBLESHOOTING INDEX

When the vehicle has one of these symptoms, check for a diagnostic trouble code (DTC) with the HDS. If there is no DTC, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

SYMPTOM TROUBLESHOOTING CHART

Symptom	Diagnostic procedure	Also check for
Engine will not start (MIL works OK, no DTCs set)	1. Test the battery (see <u>BATTERY TEST</u>). 2. Test the starter (see <u>STARTER PERFORMANCE TEST</u>). 3. Check the fuel pressure (see <u>FUEL PRESSURE TEST</u>).	• Low compression • No ignition spark • Intake air leaks • Locked up engine • Broken timing belt • Contaminated fuel
Engine will not start (MIL comes on and stays on, or never comes on at all, no DTCs set)	Troubleshoot the DLC circuit (see <u>DLC CIRCUIT TROUBLESHOOTING</u>).	• Low compression • No ignition spark • Intake air leaks • Locked up engine • Broken timing belt • Contaminated fuel • No power to PCM • No ground to PCM • Shorted reference voltage
MIL comes on and stays on, or never comes on at all, no DTCs set	Troubleshoot the MIL circuit (see <u>MIL CIRCUIT TROUBLESHOOTING</u>).	
Engine will not start (MIL works OK, no DTCs set, immobilizer indicator stays on or flashes)	Check the immobilizer system (see <u>SYSTEM CHECK</u>).	
Engine starts but stalls immediately (MIL works	Check the immobilizer system (see <u>SYSTEM</u>	• Jumped timing belt • Low compression

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

OK, no DTCs set, immobilizer indicator stays on or flashes)	<u>CHECK</u>).	• Intake air leaks • Contaminated fuel • Weak spark
Engine is hard to start (MIL works OK, no DTCs set)	1. Test the battery (see <u>BATTERY TEST</u>). 2. Check the fuel pressure (see <u>FUEL PRESSURE TEST</u>). 3. Clean the throttle body (see <u>THROTTLE BODY CLEANING</u>).	• Low compression • Intake air leaks • Contaminated fuel • Weak spark
Cold fast idle too low (MIL works OK, no DTCs set)	1. Do the PCM idle learn procedure (see <u>PCM IDLE LEARN PROCEDURE</u>). 2. Check the idle speed (see <u>IDLE SPEED INSPECTION</u>). 3. Clean the throttle body (see <u>THROTTLE BODY CLEANING</u>).	• Incorrect valve adjustment • ECT sensor • Fuel contamination
Cold fast idle too high (MIL works OK, no DTCs set)	1. Do the PCM idle learn procedure (see <u>PCM IDLE LEARN PROCEDURE</u>). 2. Check the idle speed (see <u>IDLE SPEED INSPECTION</u>). 3. Do the throttle position learning check (see <u>THROTTLE BODY TEST</u>).	• Incorrect valve adjustment • Intake air leaks
Idle speed fluctuates (MIL works OK, no DTCs set)	1. Do the PCM idle learn procedure (see <u>PCM IDLE LEARN PROCEDURE</u>). 2. Check the idle speed (see <u>IDLE SPEED INSPECTION</u>). 3. Do the carbon accumulation check (see <u>THROTTLE BODY TEST</u>). 4. Troubleshoot the A/C signal circuit (see <u>A/C SIGNAL CIRCUIT TROUBLESHOOTING</u>).	Intake air leaks
After warming up, idle speed is below specification without load (MIL works OK, no DTCs set)	1. Troubleshoot the alternator FR signal circuit (see <u>ALTERNATOR FR SIGNAL CIRCUIT TROUBLESHOOTING</u>). 2. Do the carbon accumulation check (see <u>THROTTLE BODY TEST</u>).	• Incorrect valve adjustment • Intake vacuum leaks
After warming up, idle speed is above specification without load (MIL works OK, no DTCs set)	1. Troubleshoot the alternator FR signal circuit (see <u>ALTERNATOR FR SIGNAL CIRCUIT TROUBLESHOOTING</u>). 2. Inspect the APP sensor (see <u>APP SENSOR SIGNAL INSPECTION</u>). 3. Troubleshoot the power steering switch signal	Intake vacuum leaks

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

	circuit (see <u>PSP SWITCH SIGNAL CIRCUIT TROUBLESHOOTING</u>).	
After warming up, idle speed drops when steering wheel is turning (MIL works OK, no DTCs set)	1. Do the PCM idle learn procedure (see <u>PCM IDLE LEARN PROCEDURE</u>). 2. Troubleshoot the PSP switch signal circuit (see <u>PSP SWITCH SIGNAL CIRCUIT TROUBLESHOOTING</u>). 3. Do the carbon accumulation check (see <u>THROTTLE BODY TEST</u>).	Power steering system problems
Low power (MIL works OK, no DTCs set)	Check the fuel pressure (see <u>FUEL PRESSURE TEST</u>).	• Low compression • Incorrect camshaft timing • Incorrect engine oil level • Restricted exhaust • Fuel contamination
Engine stalls (MIL works OK, no DTCs set)	1. Do the PCM idle learn procedure (see <u>PCM IDLE LEARN PROCEDURE</u>). 2. Check the fuel pressure (see <u>FUEL PRESSURE TEST</u>). 3. Check the idle speed (see <u>IDLE SPEED INSPECTION</u>). 4. Troubleshoot the brake pedal position switch signal circuit (see <u>BRAKE PEDAL POSITION SWITCH SIGNAL CIRCUIT TROUBLESHOOTING</u>).	• Intake air leaks • Faulty harness and sensor connections • Fuel contamination
Difficult to refuel (MIL works OK, no DTCs set)	1. Check the fuel tank vapor control valve hose between the EVAP canister and the fuel tank. 2. Check the fuel tank vapor recirculation tube between the fuel filler pipe and the fuel tank. 3. Inspect the fuel filler neck for restrictions. 4. Replace the fuel tank (see <u>FUEL TANK REPLACEMENT</u>).	• Malfunctioning gas station filling nozzle. • Filler neck restriction • Fuel tank vapor control valve
Fuel overflows during refueling (No DTCs set)	1. Inspect the fuel filler neck for restrictions. 2. Replace the fuel tank (see <u>FUEL TANK REPLACEMENT</u>).	Malfunctioning gas station filling nozzle.
HDS does not communicate with the PCM or the vehicle	Troubleshoot the DLC circuit (see <u>DLC CIRCUIT TROUBLESHOOTING</u>).	
Fuel cap warning message	Troubleshoot the fuel cap warning message system	

comes on and stays on (MIL works OK, no DTCs set)	(see <u>FUEL CAP WARNING MESSAGE SYSTEM TROUBLESHOOTING</u>).	
---	---	--

SYSTEM DESCRIPTION

ELECTRONIC CONTROL SYSTEM

The functions of the fuel and emission control systems are managed by the powertrain control module (PCM).

Self-diagnosis

The PCM detects a signal failure from a sensor or from another control unit and stores a Temporary DTC or a DTC. Depending on the failure, a DTC is stored in either the first or the second drive cycle (for DTC P0457, the DTC is set in the beginning of the third drive cycle). When a DTC is stored, the PCM turns on the malfunction indicator lamp (MIL) by sending a signal to the gauge via F-CAN.

- **One Drive Cycle Detection Method**

When an abnormality occurs in the signal from a sensor or from another control unit, the PCM stores a DTC for the failure and turns on the MIL immediately.

- **Two Drive Cycle Detection Method**

When an abnormality occurs in the signal from a sensor or from another control unit in the first drive cycle, the PCM stores a Temporary DTC for the failure. The MIL does not come on at this time. If the failure continues in the second drive cycle, the PCM stores a DTC and turns on the MIL.

Fail-safe Function

When an abnormality occurs in the signal from a sensor or from another control unit, the PCM ignores that signal and substitutes a pre-programmed value that allows the engine to continue running. This causes a DTC to be stored and the MIL to come on.

MIL Bulb Check and Readiness Code Condition

When the ignition switch is turned ON (II), the PCM turns on the MIL via the F-CAN circuit for about 15 to 20 seconds to check the bulb condition. If any readiness codes are not set to complete, the MIL flashes five times. If all readiness codes are set to complete, the MIL goes off.

Self Shut Down (SSD) Mode

After the ignition switch is turned OFF, the PCM stays on (up to 40 minutes). If the PCM connector is disconnected during this time, the PCM may be damaged. To cancel this mode, disconnect the negative cable from the battery or jump the SCS line with the HDS after the ignition switch is turned OFF.

PCM Electrical Connections

PCM INPUTS AND OUTPUTS AT CONNECTOR A (I) (49P)

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

Terminal side of female terminals

Fig. 18: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
1	WHT	VBSOL2 (POWER SOURCE FOR SOLENOID VALVES)	Power source for solenoid valve	With ignition switch ON (II): battery voltage
2	PNK	SLS (SHIFT LOCK SOLENOID)	Drives shift lock solenoid	With ignition switch ON (II), in the P position, brake pedal pressed, and accelerator released: about 0 V
3	LTGRN	STRLY (STARTER RELAY)	Drives starter cut relay 2	With ignition switch ON (II): about 0 V
4	WHT	FANL (RADIATOR FAN CONTROL)	Drives A/C condenser fan relay	With condenser fan running: about 0 V With condenser fan stopped: battery voltage
5	PUR	FANH (RADIATOR FAN CONTROL)	Drives radiator fan relay	With radiator fan running: about 0 V With radiator fan stopped: battery voltage
6	GRN	MRLY (PGM-FI MAIN RELAY 1)	Drives PGM-FI main relay 1 power source for the DTC memory)	With ignition switch ON (II): about 0 V With ignition switch OFF: battery voltage
7	BRN	BKSWNC (BRAKE PEDAL POSITION SWITCH)	Detects brake pedal position switch signal	With ignition switch ON (II) and brake pedal released: battery voltage With ignition switch ON (II) and brake pedal pressed: about 0 V

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

8	LTGRN	BKSW (BREAK PEDAL POSITION SWITCH)	Detects brake pedal position switch signal	With brake pedal released: about 0 V With brake pedal pressed: battery voltage
---	-------	------------------------------------	--	---

PCM INPUTS AND OUTPUTS AT CONNECTOR A (II) (49P)

Terminal side of female terminals

Fig. 19: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
9	BLK	VG - (MASS AIR FLOW (MAF) SENSOR - SIDE)	Ground for MAF sensor signal	
10	ORN	ELD (ELECTRICAL LOAD DETECTOR (ELD))	Detects ELD signal	With ignition switch ON (II): about 0.1 - 4.8 V (depending on electrical load)
11	BRN	IMOFPR (IMMOBILIZER FUEL PUMP RELAY)	Drives PGM-FI main relay 2	About 0 V for 2 seconds after turning ignition switch ON (II), then battery voltage With the engine running: about 0 V
12	BLU	MCS (ENGINE MOUNT CONTROL SOLENOID VALVE)	Drives engine mount control solenoid valve	At idle: about 0 V About idle: battery voltage
13	RED	ACC (A/C COMPRESSOR CLUTCH RELAY)	Drives A/C compressor clutch relay	With compressor ON: about 0 V With compressor OFF: battery voltage
16	GRN	ATPP (TRANSMISSION RANGE SWITCH P	Detects transmission range switch P	In P: about 0 V In any position other than P:

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

		POSITION)	position signal	battery voltage
18	PUR	APSA (ACCELERATOR PEDAL POSITION (APP) SENSOR A)	Detects APP sensor A signal	With ignition switch ON (II) and accelerator pedal pressed: about 4.7 V With ignition switch ON (II) and accelerator pedal released: about 1.0 V

PCM INPUTS AND OUTPUTS AT CONNECTOR A (II) (49P)

Terminal side of female terminals

Fig. 20: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
19	LTGRN	APSB (ACCELERATOR PEDAL POSITION (APP) SENSOR B)	Detects APP sensor B signal	With ignition switch ON (II) and accelerator pedal pressed: about 2.3 V With ignition switch ON (II) and accelerator pedal released: about 0.5 V
20	RED	VG + (MASS AIR FLOW (MAF) SENSOR + SIDE)	Detects MAF sensor signal	At idle: about 1.1 - 1.6 V (between VG + terminal and VG - terminal)
21	PUR	ECT2 (ENGINE COOLANT TEMPERATURE SENSOR (ECT) SENSOR 2)	Detects ECT sensor 2 signal	With ignition switch ON (II): about 0.1 - 4.8 V (depending on engine coolant temperature)
22	LTGRN	VSV (EVAPORATIVE EMISSION (EVAP) CANISTER VENT SHUT VALVE)	Drives EVAP canister vent shut valve	With ignition switch ON (II): battery voltage

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

24	RED	VCC3 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
25	ORN	VCC4 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
26	WHT	SG3 (SENSOR GROUND)	Sensor around	Less than 0.5 V at all times
27	GRN	SG4 (SENSOR GROUND)	Sensor ground	Less than 0.5 V at all times

PCM INPUTS AND OUTPUTS AT CONNECTOR A (I) (49P)

Terminal side of female terminals

Fig. 21: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
28	PNK	STRLD (STARTER SIGNAL LOAD)	Detects starter cut relay	With starter ON: battery voltage
29	BLU	ETCSRLY (ELECTRONIC THROTTLE CONTROL SYSTEM (ETCS) CONTROL RELAY)	Drives electronic throttle control system (ETCS) control relay	With ignition switch ON (II): about 0 V
30	BLU	VSSOUT (VEHICLE SPEED SIGNAL OUTPUT)	Sends output shaft (countershaft) speed sensor signal	Depending on vehicle speed: pulses
31	LT BLU	STS (STARTER SWITCH SIGNAL)	Detects starter switch signal	With starter switch ON (II): battery voltage With starter switch OFF: about 0 V
32	BRN	SCS (SERVICE CHECK)	Detects service check	With the service check signal shorted with the HDS: about 0 V

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

		SIGNAL)	signal	With the service check signal opened: about 5.0 V
36	BLU	SUP (TRANSMISSION GEAR SELECTION SWITCH UPSHIFT SWITCH)	Detects transmission gear selection switch upshift switch signal	In M and shift lever pushed toward upshift position: about 0 V In M and shift lever in N: battery voltage
37	GRN	SDN (TRANSMISSION GEAR SELECTION SWITCH DOWNSHIFT SWITH)	Detects transmission gear selection switch downshift switch signal	In M and shift lever pushed toward downshift position: about 0 V In M and shift lever in N: battery voltage

PCM INPUTS AND OUTPUTS AT CONNECTOR A (I) (49P)

Terminal side of female terminals

Fig. 22: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
38	PNK	PSPSW (POWER STEERING PRESSURE SWITCH SIGNAL)	Detects PSP switch signal	At idle with steering wheel in straight ahead position: about 0 V At idle with steering wheel at full lock: battery voltage
39	LTGRN	FTP (FUEL TANK PRESSURE (FTP) SENSOR	Detects FTP sensor signal	With ignition switch ON (II) and fuel fill cap removed: about 2.5 V
			Drives PGM-FI	With ignition switch ON

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

40	RED	SUBRLY(PGM-FI SUBRELAY)	subrelay	(II): about 0 V
41	BRN	LG3 (LOGIC GROUND)	Ground circuit for the immobilizer unit	Less than 0.5 V at all time
42	LT BLU	FPCD (FUEL PUMP CONTROL MODULE DIAGNOSIS)	Detects fuel pump control diagnosis	With ignition switch ON (II): about 5.0 V At idle: about 10.0 V
43	PNK	FPC (FUEL PUMP CONTROL)	Detects fuel pump control signal	With ignition switch ON: pulses With ignition switch OFF: about 0 V
44	GRY	WEN (WRITE ENABLE SIGNAL)	Detects write enable signal	With ignition switch ON (II): about 0 V
46	LTGRN	S-NET5V (SERIAL COMMUNICATION FOR IMMOBILIZER)	Sends serial communication signal	With ignition switch ON (II): pulses With ignition switch OFF: about 5.0 V

PCM INPUTS AND OUTPUTS AT CONNECTOR A (I) (49P)

Terminal side of female terminals

Fig. 23: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
47	PUR	SMODE (SEQUENTIAL SPORTSHIFT MODE)	Detects sequential sportshift mode switch signal	In M: about 0 V In any position other than M: battery voltage
48	WHT	CANH (CAN COMMUNICATION SIGNAL)	Sends communication signal	With ignition switch ON (II): pulses

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

		HIGH)		
49	RED	CANL(CAN COMMUNICATION SIGNAL LOW)	Sends communication signal	With ignition switch ON (II): pulses

PCM INPUTS AND OUTPUTS AT CONNECTOR B (DELTA) (49P)

Terminal side of female terminals

Fig. 24: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
1	BLK	PG2 (POWER GROUND)	Ground circuit for PCM circuit	Less than 0.5 V at all times
2	BLK/YEL	VBSOL1 (POWER SOURCE FOR SOLENOID VALVES)	Power source for solenoid valve	With ignition switch ON (II): battery voltage
3	YEL/BLK	IGP (POWER SOURCE)	Power source for PCM circuit	With ignition switch ON (II): battery voltage
4	BRN	INJ1 (No. 1 INJECTOR)	Drives No. 1 injector	At idle: duty controlled With ignition switch ON (II): battery voltage
5	BLK/RED	INJ5 (No. 5 INJECTOR)	Drives No. 5 injector	
6	YEL	INJ4 (No. 4 INJECTOR)	Drives No. 4 injector	
7	BLU	INJ3 (No. 3 INJECTOR)	Drives No. 3 injector	
8	RED	INJ2 (No. 2 INJECTOR)	Drives No. 2 injector	
9	WHT/BLU	INJ6 (No. 6 INJECTOR)	Drives No. 6 injector	With ignition switch ON (II): current controlled
10	BRN/WHT	LSB (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE B)	Drives A/T clutch pressure control solenoid valve B	

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

PCM INPUTS AND OUTPUTS AT CONNECTOR B (DELTA) (49P)

Terminal side of female terminals

Fig. 25: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
11	BLK/RED	IGPLS5 (No. 5 IGNITION COIL PULSE)	Drives No. 5 ignition coil	With ignition switch ON (II): about 0 V
12	BRN/WHT	IGPLS6 (No. 6 IGNITION COIL PULSE)	Drives No. 6 ignition coil	With engine running: pulses
13	BLU	VSB1 (VS CELL+ BANK 1)	Detects the rear A/F sensor (BANK 1, sensor 1) VS CELL signal	With engine running: about 3.4 - 4.8 V
14	RED/BLU	VSB2 (VSCELL + BANK2)	Detects front A/F sensor (BANK 1, sensor 1) VS CELL signal	With fully warmed up engine running: about 3.4 - 4.8 V
15	RED	VCENTB1 (VIRTUAL GROUND BANK 1)	Reference voltage supply for rear A/F sensor (BANK 1, sensor 1)	With fully warmed up engine running: about 3.4 - 3.8 V
16	WHT	SHO2SB2 (FRONT SECONDARY HEATED OXYGEN SENSOR (FRONT SECONDARY HO2S) BANK 2, SENSOR 2)	Detects front secondary HO2S (Bank 2, sensor 2) signal	With throttle fully opened from idle with fully warmed up engine: about 0.6 V With throttle quickly closed: below 0.4 V
		TPSA (THROTTLE POSITION	Detects TP sensor A	With throttle fully open: about 3.9 V

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

17	RED/BLK	(TP) SENSOR A)	signal	With throttle fully closed: about 0.9 V
----	---------	----------------	--------	---

PCM INPUTS AND OUTPUTS AT CONNECTOR B (DELTA) (49P)

Fig. 26: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
18	BLU	VCC5 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
19	WHT/BLK	IMTM (INTAKE MANIFOLD TUNING (IMT) VALVE MONITOR)	Detects IMT valve position	With ignition switch ON (II): about 0 V With engine speed above 3,800 rpm: about 5.0 V
20	BLU/WHT	VTPSW (ROCKER ARM OIL PRESSURE SWITCH)	Detects rocker arm oil pressure switch	With engine at low speed: about 0 V With engine at high speed: battery voltage
21	GRN/RED	LSC (AT CLUTCH PRESSURE CONTROL SOLENOID VALVE C)	Drives A/T clutch pressure control solenoid valve C	With ignition switch ON (II): current controlled
22	WHT/BLU	IGPLS3 (No. 3 IGNITION COIL PULSE)	Drives No. 3 ignition coil	With ignition switch ON (II): about 0 V
23	BRN	IGPLS4 (No. 4 IGNITION COIL PULSE)	Drives No. 4 ignition coil	With engine running: pulses
24	RED/WHT	VCENTB2 (VIRTUAL GROUND BANK 2)	Reference voltage supply for front A/F sensor (Bank 2, sensor 1)	With fully warmed up engine at idle: about 3.4 - 4.8 V

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

PCM INPUTS AND OUTPUTS AT CONNECTOR B (DELTA) (49P)

Fig. 27: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
25	GRN	SHO2SB1 (REAR SECONDARY HEATED OXYGEN SENSOR (REAR SECONDARY HO2S) BANK 1, SENSOR 2)	Detects rear secondary HO2S (Bank 1, sensor 2) signal	With throttle fully opened from idle with fully warmed up engine: about 0.6 V With throttle quickly closed: below 0.4 V
26	RED/BLU	TPSB (THROTTLE POSITION (TP) SENSOR B)	Detects TP sensor B signal	With throttle fully open: about 4.1 V With throttle fully closed: about 1.7 V
29	YEL/GRN	IGPLS1 (No. 1 IGNITION COIL PULSE)	Drives No. 1 ignition coil	With ignition switch ON (II): about 0 V
30	BLU/RED	IGPLS2 (No. 2 IGNITION COIL PULSE)	Drives No. 2 ignition coil	With engine running: pulses
31	GRN	IPB1 (IP CELL + BANK1)	Detects rear A/F sensor (Bank 1, sensor 1) pump cell	With engine running: about 2.0-5.6 V
32	GRN/RED	IPB2 (IP CELL + BANK2)	Detects front A/F sensor (Bank 2, sensor 1) pump cell	With engine running: about 2.0-5.6 V
33	GRN	SG5 (SENSOR GROUND)	Sensor ground	Less than 0.5 V at all times
34	GRN/WHT	SG1 (SENSOR GROUND)	Sensor ground	Less than 0.5 V at all times

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

35	GRN/RED	MAP (MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR)	Detects MAP sensor signal	With ignition switch ON (II): about 3.0 V At idle: about 1.0 V (depending on engine speed)
----	---------	---	---------------------------	---

PCM INPUTS AND OUTPUTS AT CONNECTOR B (DELTA) (49P)

Fig. 28: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
36	YEL/RED	VCC1 (SENSOR VOLTAGE)	Provides sensor reference voltage	Ignition switch ON: about 5.0 V
37	RED	NM (INPUT SHAFT (MAINSHAFT) SPEED SENSOR)	Detects input shaft (mainshaft) speed sensor signals	With ignition switch ON (II): about 0 V or about 5.0 V With engine running in N: about 2.5 V
38	BLU	NC (OUTPUT SHAFT (COUNTERSHAFT) SPEED SENSOR)	Detects output shaft (countershaft) speed sensor signal	With ignition switch ON (II) and front wheels rotated by hand: about 0 V or 5.0 V While driving: pulses
39	GRN/YEL	VTS (ROCKER ARM OIL CONTROL SOLENOID)	Drives rocker arm oil control solenoid	At idle: about 0 V
40	BLK	PG1 (POWER GROUND)	Ground circuit for PCM circuit	Less than 0.5 V at all times
41	BRN/YEL	LG2 (LOGIC GROUND)	Ground circuit for PCM circuit	Less than 0.5 V at all times

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

42	BLK/YEL	IG1 (IGNITION SIGNAL)	Detects ignition signal	With ignition switch ON (II): battery voltage
44	BLU/RED	CKPB (CRANKSHAFT POSITION (CKP) SENSOR B)	Detects CKP sensor B signal	With engine running: pulses
45	BLU	CKPA (CRANKSHAFT POSITION (CKP) SENSOR A)	Detects CKP sensor A signal	With engine running: pulses
46	YEL	CMP (CAMSHAFT POSITION (CMP) SENSOR)	Detects CMP sensor signal	With engine running: pulses

PCM INPUTS AND OUTPUTS AT CONNECTOR C (O) (49P)

Terminal side of female terminals

Fig. 29: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
1	BLK	PGMETCS (POWER GROUND ETCS)	Ground circuit for PCM circuit	Less than 0.5 V at all times
2	BLU	ETCSM + (THROTTLE ACTUATOR + SIDE)	Drives throttle actuator	With ignition switch ON (II): about 0 V
3	GRN	ETCSM - (THROTTLE ACTUATOR - SIDE)	Ground for throttle actuator	With ignition switch ON (II): about 0 V
4	YEL/GRN	IG1 ETCS (IGNITION SIGNAL ETCS)	Detects ignition signal	With ignition switch ON (II): battery voltage
5	BLK/WHT	SO2SHTCB1 (REAR SECONDARY HEATED OXYGEN	Drives rear secondary HO2S heater (Bank	With ignition switch ON (II): battery voltage

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

		SENSOR (REAR SECONDARY HO2S) HEATER)	1, sensor 2)	With fully warmed up engine running: duty controlled
6	BLK/WHT	AFSHTCB1 (REAR AIR FUEL RATIO (REAR A/F) SENSOR HEATER CONTROL BANK 1, SENSOR 1)	Drives rear A/F sensor heater (Bank 1, sensor 1)	With ignition switch ON (II): battery voltage With fully warmed up engine running: about 0 V or pulses

PCM INPUTS AND OUTPUTS AT CONNECTOR C (O) (49P)

Terminal side of female terminals

Fig. 30: Identifying PCM Inputs And Outputs Connector

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
7	GRN/RED	SO2SHTCB2 (FRONT SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S) HEATER)	Drives front secondary HO2S heater (Bank 2, sensor 2)	With ignition switch ON (II): battery voltage With fully warmed up engine running: duty controlled
8	GRN/WHT	AFSHTCB2 (FRONT AIR FUEL RATIO (FRONT A/F) SENSOR HEATER CONTROL BANK 2, SENSOR 1)	Drives front A/F sensor heater (Bank 2, sensor 1)	With ignition switch ON (II): battery voltage With fully warmed up engine running: about 0 V or pulses
				With engine running in N, and in D and D3 during no lock-up condition: about 0 V

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

9	GRN/RED	SHD (SHIFT SOLENOID VALVE D)	Drives shift solenoid valve D	With engine running in P and R, and in D and D3 during lock-up condition: battery voltage
10	BLU/RED	EGR (EXHAUST GAS RECIRCULATION (EGR) VALVE)	Drives EGR valve	With EGR operating: duty controlled With EGR not operating: about 0 V
11	YEL/BLU	VCC6 (SENSOR VOLTAGE)	Provides sensor reference voltage	With ignition switch ON (II): about 5.0 V
12	YEL/BLU	VCC2 (SENSOR VOLTAGE)	Provides sensor voltage	With ignition switch ON (II): about 5.0 V
15	GRN/YEL	SG6 (SENSOR GROUND)	Sensor ground	Less than 0.5 V at all times

PCM INPUTS AND OUTPUTS AT CONNECTOR C (O) (49P)

Terminal side of female terminals

Fig. 31: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
16	GRN/YEL	SG2 (SENSOR GROUND)	Sensor ground	Less than 0.5 V at all times
17	YEL/GRN	ATPD (TRANSMISSION RANGE SWITCH D)	Detects transmission range switch D position signal input	In D: about 0 V In any position other than D: battery voltage
18	BLU/YEL	ATPFWD (TRANSMISSION RANGE SWITCH D/D3 POSITION)	Detects transmission range switch D, D3 position signal	In D and D3: about 0 V In any position other than D and D3: battery voltage

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

19	RED/WHT	ATPRVS (TRANSMISSION RANGE SWITCH R POSITION)	Detects transmission range switch P, R, N position signal input	In P, R, and N: about 0 V In any position other than P, R, and N: battery voltage
20	BLU/YEL.	SHA (SHIFT SOLENOID VALVE A)	Drives shift solenoid valve A	With engine running in R, and in D3 and D (in 2nd, and 3rd gears): battery voltage With engine running in P and N, D, and D3 (in 1st gear), and D (4th and 5th gears): about 0 V
21	RED	LSA (A/T CLUTCH PRESSURE CONTROL SOLENOID VALVE A)	Drives A/T clutch pressure control solenoid valve A	With ignition switch ON (II): current controlled
24	RED/YEL	IAT (INTAKE AIR TEMPERATURE (IAT) SENSOR)	Detects IAT sensor signal	With ignition switch ON (II): about 0.1-4.8 V (depending on intake air temperature)
25	WHT	ATPR (TRANSMISSION RANGE SWITCH R)	Detects transmission range switch R position signal input	In R: about 0 V In any position other than R: battery voltage

PCM INPUTS AND OUTPUTS AT CONNECTOR C (O) (44P)

Terminal side of female terminals

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
38	BLU/WHT	OP3SW (3RD CLUTCH TRANSMISSION FLUID PRESSURE SWITCH)	Detects 3rd clutch transmission fluid pressure switch input	With ignition switch ON (II): - Without 3rd clutch pressure: about 5.0 V - With 3rd clutch pressure: about 0 V
39	GRN	SHC (SHIFT SOLENOID VALVE C)	Drives shift solenoid valve C	With engine running in D and D3 (in 1st and 3rd gears), D (in 5th gear): battery voltage With engine running in P, R, and N, D, and D3 (2nd gear), and D (4th gears): about 0 V
40	RED/YEL	PCS (EVAPORATIVE EMISSION (EVAP) CANISTER PURGE VALVE)	Drives EVAP canister purge valve	With engine running, engine coolant below 140°F (60°C): battery voltage With engine running, engine coolant above 140°F (60°C): duty controlled
41	BRN/YEL	LG1 (LOGIC GROUND)	Ground circuit for PCM circuit	Less than 0.5 V at all times
42	WHT/BLU	ALTL (ALTERNATOR L SIGNAL)	Detects alternator L signal	With ignition switch ON (II): about 0 V With engine running: battery voltage

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

43	WHT/GRN	ALTC (ALTERNATOR CONTROL)	Sends alternator control signal	With fully warmed up engine running battery voltage (depending on electrical load)
44	WHT/RED	ALTF (ALTERNATOR FR SIGNAL)	Detects alternator FR signal	With engine running: about 0-5.0 V (depending on electrical load)
45	BLU/YEL	OPSW (OIL PRESSURE SWITCH)	Detects engine oil pressure signal	With ignition switch ON (II): about 0 V With engine running: battery voltage

PCM INPUTS AND OUTPUTS AT CONNECTOR C (O) (49P)

Terminal side of female terminals

Fig. 34: Identifying PCM Inputs And Outputs Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Standard battery voltage is about 12 V.

VOLTAGE REFERENCE CHART

Terminal number	Wire color	Terminal name	Description	Signal
46	RED	ATPD3 (TRANSMISSION RANGE SWITCH D3)	Detects transmission switch D3 signal input	In D3: about 0 V In any position other than D3: battery voltage
47	RED/BLU	KS (KNOCK SENSOR)	Detects knock sensor signal	With engine knocking: pulses
48	WHT/BLU	IMT + (INTAKE MANIFOLD TUNING (IMT) ACTUATOR + SIDE)	Drives IMT actuator	With ignition switch ON (II): battery voltage
49	WHT/RED	IMT - (INTAKE MANIFOLD TUNING (IMT) ACTUATOR - SIDE)	Drives IMT actuator	With ignition switch ON (II): battery voltage

PGM-FI SYSTEM

The programmed fuel injection (PGM-FI) system is a sequential multiport fuel injection system.

Alternator Control

The alternator signals the PCM during charging.

Air Conditioning (A/C) Compressor Clutch Relay

When the PCM receives a demand for cooling from the A/C system, it delays the compressor from being energized, and enriches the mixture to assure smooth transition to the A/C mode.

Air Fuel Ratio (A/F) Sensor

The A/F sensor operates over a wide air/fuel range. The A/F sensor is installed upstream of the warm up the three way catalytic converter (WU-TWC), and sends signals to the PCM which varies the duration of fuel injection accordingly.

Fig. 35: Identifying Ceramic Holder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Barometric Pressure (BARO) Sensor

The BARO sensor is inside the PCM. It converts atmospheric pressure into a voltage signal that modifies the basic duration of the fuel injection discharge.

Camshaft Position (CMP) Sensor

The CMP sensor input is used by the PCM to determine ignition timing at start up (cranking) and when crank angle is abnormal.

Fig. 36: Identifying Camshaft Position (CMP) Sensor Terminal And Magnet

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Crankshaft Position (CKP) Sensor

The CKP sensor detects crankshaft speed and is used by the PCM to determine ignition timing and timing for fuel injection of each cylinder, as well as detecting engine misfire.

Fig. 37: Identifying Crankshaft Position (CKP) Sensor Subharness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Engine Coolant Temperature (ECT) Sensor 1 and 2

ECT sensors 1 and 2 are temperature dependent resistors (thermistors). The resistance decreases as the engine coolant temperature increases.

Fig. 38: Identifying Engine Coolant Temperature (ECT) Sensor Thermister And Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Ignition Timing Control

The PCM contains the memory for basic ignition timing at various engine speeds and manifold absolute pressures. It also adjusts the timing according to engine coolant temperature.

Injector Timing and Duration

The PCM contains the memory for basic discharge duration at various engine speeds and manifold pressures. The basic discharge duration, after being read out from the memory, is further modified by signals sent from various sensors to obtain the final discharge duration.

By monitoring long term fuel trim, the PCM detects long term malfunctions in the fuel system and sets a diagnostic trouble code (DTC).

Knock Sensor

The knock control system adjusts the ignition timing to minimize knock.

Fig. 39: Identifying Knock Sensor Terminal And Diaphragm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Malfunction Indicator Lamp (MIL) Indication (In relation to Readiness Codes)

The vehicle has certain "readiness codes" that are part of the on-board diagnostics for the emissions systems. If the vehicle's battery has been disconnected or gone dead, if the DTCs have been cleared, or if the PCM has been reset, these codes are reset. In some states, part of the emissions testing is to make sure these codes are set to complete. If all of them are not set to complete, the vehicle may fail the test, or the test cannot be finished.

To check if the readiness codes are set to complete, turn the ignition switch ON (II), but do not start the engine. The MIL will come on for 15-20 seconds. If it then goes off, the readiness codes are complete. If it flashes five times, one or more readiness codes are not complete. To set each code, drive the vehicle or run the engine as described in the procedures (see **HOW TO SET READINESS CODES**).

Manifold Absolute Pressure (MAP) Sensor

The MAP sensor converts manifold absolute pressures into electrical signals to the PCM.

Fig. 40: Identifying Manifold Absolute Pressure (MAP) Sensor Terminal And O-Ring
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Mass Air Flow (MAF) Sensor/Intake Air Temperature (IAT) Sensor

The mass airflow (MAF) sensor/intake air temperature (IAT) sensor contains a hot wire and a thermistor. It is located in the intake air passage. The resistance of the hot wire and thermistor change due to intake air temperature and airflow. The control circuit in the MAF sensor controls the current to keep the hot wire at a set temperature. The current is converted to voltage in the control circuit, then output to the PCM.

Fig. 41: Identifying Intake Air Temperature Sensor Thermistor And O-Ring
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Output Shaft (Countershaft) Speed Sensor

This sensor detects countershaft speed.

Fig. 42: Identifying Output Shaft (Countershaft) Speed Sensor Magnet And O-Ring
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Secondary Heated Oxygen Sensor (Secondary HO2S)

The secondary HO2S detects the oxygen content in the exhaust gas downstream of the warm up three way catalytic converter (WU-TWC), and sends signals to the PCM. To stabilize its output, the sensor has an internal heater. The PCM compares the HO2S output with the A/F sensor output to determine catalyst efficiency. The secondary HO2S is on the WU-TWC.

Fig. 43: Identifying Secondary Heated Oxygen Sensor Element And Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

ELECTRONIC THROTTLE CONTROL SYSTEM

The throttle is electronically controlled by the electronic throttle control system. Refer to the system diagram to see a functional layout of the system.

Idle control: When the engine is idling, the PCM controls the throttle actuator to maintain the proper idle speed according to engine loads.

Acceleration control: When the accelerator pedal is pressed, the PCM opens the throttle valve depending on the accelerator pedal position (APP) sensor signal.

Cruise control: The PCM controls the throttle actuator to maintain the set speed when cruise control is operating. The throttle actuator takes the place of the cruise control actuator.

Accelerator Pedal Position (APP) Sensor

As the accelerator pedal position changes, the sensor varies the signal voltage to the PCM.

Fig. 44: Identifying Accelerator Pedal Module And APP Sensor A/B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Throttle Body

The throttle body is a single-barrel side draft type. The lower portion of the throttle valve is heated by engine coolant from the cylinder head to prevent icing of the throttle plate.

Fig. 45: Identifying Throttle Body Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

IDLE CONTROL SYSTEM

When the engine is cold, the A/C compressor is on, the transmission is in gear, the brake pedal is pressed, the power steering load is high, or the alternator is charging, the PCM sends signals to the throttle actuator to maintain the correct idle speed.

Brake Pedal Position Switch

The brake pedal position switch signals the PCM when the brake pedal is pressed.

Power Steering Pressure (PSP) Switch

The PSP switch signals the PCM when the power steering load is high.

FUEL SUPPLY SYSTEM**Fuel Cutoff Control**

During deceleration with the throttle valve closed, current to the injectors is cut off to improve fuel economy at engine speeds over 850 rpm. Fuel cutoff control also occurs when the engine speed exceeds 6,600 rpm, regardless of the position of the throttle valve, to protect the engine from over-revving. When the vehicle is stopped, the PCM cuts the fuel at engine speeds over 5,000 rpm. On a cold engine, fuel cut occurs at a lower engine speed.

Fuel Pump Control

When the ignition switch is turned on, the PCM grounds PGM-FI main relay 2 which feeds current to the fuel pump control module. The PCM sends a signal to the fuel pump control module to operate the fuel pump for 2 seconds to pressurize the fuel system. With the engine running, the fuel pump speed is controlled in four levels by the fuel pump control module. The PCM decides the fuel pump speed by the calculation of the injector activation time and engine speed and sends a operation command signal to the fuel pump control module. This operation made possible to decrease fuel pump noise at low engine speed.

PGM-FI Main Relay 1 and 2

PGM-FI main relay 1 is energized whenever the ignition switch is ON (II) to supply battery voltage to the PCM, power to the injectors, and power for PGM-FI main relay 2. PGM-FI main relay 2 is energized to supply power to the fuel pump (fuel pump control module) for 2 seconds when the ignition switch is turned ON (II), and when the engine is cranking or running.

CATALYTIC CONVERTER SYSTEM**Warm Up/Three Way Catalytic Converter (WU-TWC) and Under-Floor Three Way Catalytic Converter (TWC)**

The WU-TWC/TWC converts hydrocarbons (HC), carbon monoxide (CO), and oxides of nitrogen (NOx) in the exhaust gas to carbon dioxide (CO₂), nitrogen (N₂), and water vapor.

WU-TWC

WU-TWC**TWC**

Fig. 46: Identifying Warm Up/Three Way Catalyst Front And Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXHAUST GAS RECIRCULATION (EGR) SYSTEM

Refer to the system diagram to see a functional layout of the system.

EGR Valve

The EGR valve lowers peak combustion temperatures and reduces oxides of nitrogen emissions (NO_x) by recirculating exhaust gas through the intake manifold and into the combustion chambers.

POSITIVE CRANKCASE VENTILATION (PCV) SYSTEM

The PCV valve prevents blow-by gasses from escaping into the atmosphere by venting them into the intake manifold.

Fig. 47: Identifying Positive Crankcase Ventilation Valve And Breather Pipe
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM

Refer to the system diagram to see a functional layout of the system.

EVAP Canister

The EVAP canister temporarily stores fuel vapor from the fuel tank until it can be purged back into the engine and burned.

EVAP Canister Purge Valve

When the engine coolant temperature is below 140°F (60°C), the PCM turns off the EVAP canister purge valve which cuts vacuum to the EVAP canister.

Fig. 48: Identifying EVAP Canister Purge Valve

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fuel Tank Pressure (FTP) Sensor

The FTP sensor converts fuel tank absolute pressure into an electrical input to the PCM.

Fig. 49: Identifying Fuel Tank Pressure (FTP) Sensor Unit And Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EVAP CANISTER VENT SHUT VALVE

The EVAP canister vent shut valve is on the EVAP canister.

The EVAP canister vent shut valve controls the venting of the EVAP canister.

Fig. 50: Identifying EVAP Canister Vent Shut Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUEL CAP WARNING MESSAGE

The PCM detects a loose or missing fuel fill cap as an evaporative system leak and alerts the driver by showing a warning message in the multi-information display.

First drive cycle

The first time a leak is detected a "TIGHTEN FUEL CAP" message appears in the multi-information display

(A). To scroll to another message, press the select/reset button. The "TIGHTEN FUEL CAP" message will appear each time you restart the engine until the system turns the message off. Turn the engine off then replace or tighten the fuel fill cap until it clicks at least once.

Fig. 51: Identifying Fuel Cap Warning Message
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

TO MAKE THE MESSAGE GO OFF (WITH THE HDS)

Procedure

1. Tighten the fuel fill cap until it clicks.
2. Clear the Temporary DTC with the HDS.
3. Verify there is no leak by doing the EVAP FUNCTION TEST in the INSPECTION MENU with the HDS.

TO MAKE THE MESSAGE GO OFF (WITHOUT THE HDS)

Procedure

1. Tighten the fuel fill cap until it clicks.
2. Start the engine, then turn the ignition switch OFF.
3. Repeat step 2 two more times.

ELECTRONIC THROTTLE CONTROL SYSTEM DIAGRAM

The electronic throttle control system consists of the throttle actuator, throttle position (TP) sensor A/B, accelerator pedal position (APP) sensor A/B, the electronic throttle control system (ETCS) control relay, and the PCM.

Fig. 52: Electronic Throttle Control System Diagram
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTAKE MANIFOLD TUNING (IMT) VALVE SYSTEM

Engine power is adjusted by opening and closing the intake manifold tuning (IMT) actuator. When the valve is closed, there is high torque at low engine speed. When the valve is open, there is high torque at high engine speed.

The intake manifold tuning (IMT) valve actuator contains a sensor that detects the IMT valve position and sends it to the PCM.

Fig. 53: Identifying Intake Manifold Tuning (IMT) Valve And Actuator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXHAUST GAS RECIRCULATION (EGR) SYSTEM DIAGRAM

The EGR system reduces oxides of nitrogen (NO_x) emissions by recirculating exhaust gas through the EGR valve and the intake manifold into the combustion chambers. The PCM memory contains the ideal EGR valve position for various operating conditions.

The EGR valve position sensor detects the amount of EGR valve lift, and sends it to the PCM. The PCM then compares it with the ideal lift in its memory (based on signals sent from other sensors). If there is any difference between the two, the PCM cuts current to the EGR valve.

Fig. 54: Exhaust Gas Recirculation (EGR) System Diagram
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

EVAPORATIVE EMISSION (EVAP) CONTROL DIAGRAM

The EVAP controls minimize the amount of fuel vapor escaping to the atmosphere. Vapor from the fuel tank is temporarily stored in the EVAP canister until it can be purged from the canister into the engine and burned.

- The EVAP canister is purged by drawing fresh air through it and into a port on the intake manifold.

The purging vacuum is controlled by the EVAP canister purge valve, which operates whenever engine coolant temperature is above 140°F (60°C).

- During refueling, the fuel tank vapor control valve opens with the pressure in the fuel tank, and feeds the fuel vapor to the EVAP canister.

HOW TO SET READINESS CODES

MALFUNCTION INDICATOR LAMP (MIL) INDICATION (IN RELATION TO READINESS CODES)

The vehicle has certain "readiness codes" that are part of the on-board diagnostics for the emissions systems. If the vehicle's battery has been disconnected or gone dead, if the DTCs have been cleared, or if the PCM has been reset, these readiness codes are reset to incomplete. In some states, part of the emissions testing is to make sure

these codes are set to complete. If all of them are not set to complete, the vehicle may fail the emission test, or the test cannot be finished.

To check if the readiness codes are set to complete, turn the ignition switch ON (II), but do not start the engine. The MIL will come on for 15-20 seconds. If it then goes off, the readiness codes are set to complete. If it flashes five times, one or more readiness codes are not set to complete. To set readiness codes from incomplete to complete, do the procedure for the appropriate code.

To check the status of a specific DTC system, check the OBD status in the DTC MENU with the HDS (see **OBD STATUS**). This screen displays the code, the current data list of the enable criteria, and the status of the readiness testing.

CATALYTIC CONVERTER MONITOR AND READINESS CODE

NOTE:

- Do not turn the ignition switch off during the procedure.
- All readiness codes are cleared when the battery is disconnected, if the DTCs have been cleared, or if the PCM is reset with the HDS.
- Low ambient temperatures or excessive stop-and-go traffic may increase the drive time needed to switch the readiness code from incomplete to complete.
- The readiness code will not switch to complete until all the enable criteria are met.
- If a fault in the secondary HO2S system caused the MIL to come on, the readiness code cannot be set to complete until you correct the fault.

Enable Criteria

- ECT SENSOR 1 at 158°F (70°C) or more.
- IAT SENSOR at 20°F (-7°C) or more.
- VSS above 25 mph (40 km/h).

Procedure

1. Connect the HDS to the vehicle's data link connector (DLC), and bring up the READINESS CODES screen for Catalyst in the DTCs MENU.
2. Start the engine.
3. Test-drive the vehicle under stop-and-go conditions with short periods of steady cruise. After about 5 miles (8 km), the readiness code should switch to complete.
4. If the readiness code is still not set to complete, check for a Temporary DTC with the HDS. If there is no DTC, one or more of the enable criteria were probably not met; repeat the procedure.

EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM MONITOR AND READINESS CODE

NOTE:

All readiness codes are cleared when the battery is disconnected, if the DTCs

have been cleared, or if the PCM is reset with the HDS.

Enable Criteria

- Battery voltage is more than 10.5 V.
- Engine at idle.
- ECT SENSOR 1 and SENSOR 2 between 176°F (80°C) and 212°F (100°C).
- MAP sensor less than 46.6 kPa (14 in.Hg, 350 mmHg).
- VSS 0 mph (0 km/h).
- IAT SENSOR between 32°F (0°C) and 212°F (100°C).

Procedure

1. Connect the HDS to the DLC.
2. Start the engine.
3. Select EVAP TEST in the INSPECTION MENU with the HDS, then select the FUNCTION TEST in the EVAP TEST MENU.
 - If the result is normal, readiness is complete.
 - If the result is not normal, go to the next step.
4. Check for a Temporary DTC. If there is no DTC, one or more of the enable criteria were probably not met; repeat the procedure.

AIR FUEL RATIO (A/F) SENSOR MONITOR AND READINESS CODE**NOTE:**

- **Do not turn the ignition switch off during the procedure.**
- **All readiness codes are cleared when the battery is disconnected, if the DTCs have been cleared, or if the PCM is reset with the HDS.**

Enable Criteria

ECT SENSOR 1 at 140°F (60°C) or more.

Procedure

1. Start the engine.
2. Test-drive the vehicle under stop-and-go conditions with short periods of steady cruise. During the drive, decelerate (with the throttle fully closed) for 5 seconds. After about 3.5 miles (5.6 km), the readiness code should switch from incomplete to complete.
3. Check the readiness codes screen for the AIR FUEL RATIO (A/F) SENSOR in the DTCs MENU with the HDS.
 - If the screen shows complete, readiness is complete.
 - If the screen shows not complete, go to the next step.

4. Check for a Temporary DTC. If there is no DTC, the enable criteria was probably not met. Select the DATA LIST MENU. Check the ECT SENSOR 1 in the ALL DATA LIST with the HDS. If the ECT SENSOR 1 is less than 140°F (60°C), run the engine until it is more than 140°F (60°C), then repeat the procedure.

AIR FUEL RATIO (A/F) SENSOR HEATER MONITOR READINESS CODE

NOTE: All readiness codes are cleared when the battery is disconnected, if the DTCs have been cleared, or if the PCM is reset with the HDS.

Procedure

1. Start the engine, and let it idle for 1 minute. The readiness code should switch from incomplete to complete.
2. If the readiness code is still not set to complete, check for a Temporary DTC. If there is no DTC, repeat the procedure.

MISFIRE MONITOR AND READINESS CODE

- This readiness code is always set to available because misfiring is continuously monitored.
- Monitoring pauses, and the misfire counter resets, if the vehicle is driven over a rough road.
- Monitoring also pauses, and the misfire counter holds at its current value, if the throttle position changes more than a predetermined value, or if driving conditions fall outside the range of any related enable criteria.

FUEL SYSTEM MONITOR AND READINESS CODE

- This readiness code is always set to available because the fuel system is continuously monitored during closed loop operation.
- Monitoring pauses when the catalytic converter, EVAP control system, and A/F sensor monitors are active.
- Monitoring also pauses when any related enable criteria are not being met. Monitoring resumes when the enable criteria is again being met.

COMPREHENSIVE COMPONENT MONITOR AND READINESS CODE

This readiness code is always set to available because the comprehensive component monitor is continuously running whenever the engine is cranking or running.

EGR MONITOR AND READINESS CODE

- NOTE:**
- Do not turn the ignition switch off during the procedure.
 - All readiness codes are cleared when the battery is disconnected, if the DTCs have been cleared, or if the PCM is reset with the HDS.

2008 Acura MDX
2007-09 ENGINE PERFORMANCE Fuel and Emissions Systems - MDX

Enable Criteria

ECT SENSOR 1 at 176°F (80°C) or more.

Procedure

1. Connect the HDS to the DLC.
2. Start the engine.
3. Drive at a steady speed with the transmission in D position, at 50-62 mph (80-100 km/h) or above for more than 10 seconds.
4. With the transmission in D position, decelerate from 62 mph (100 km/h) or above by completely releasing the throttle for at least 5 seconds. If the engine is stopped during this procedure, go to step 3 and do the procedure again.
5. Check the OBD status screen for DTC P0401 in the DTCs MENU with the HDS.
 - If it is passed, readiness is complete.
 - If it is not passed, go to step 3 and retest.

2007-09 ENGINE PERFORMANCE

Fuel Supply System - MDX

COMPONENT LOCATION INDEX

DTC TROUBLESHOOTING

DTC P0461: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) RANGE/PERFORMANCE PROBLEM

NOTE:

- Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).
- Because it requires 162 miles (260 km) of driving without refueling to complete this diagnosis, this DTC P0461 cannot be duplicated during this troubleshooting.

1. Test the fuel gauge sending unit (see FUEL GAUGE SENDING UNIT TEST).

Is the fuel gauge sending unit OK?

YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge control module.

NO - Replace the fuel gauge sending unit (see FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT), then go to step 2.

2. Turn the ignition switch ON (II).
3. Reset the PCM with the HDS.
4. Do the PCM idle learn procedure (see PCM IDLE LEARN PROCEDURE).
5. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0461 indicated?

YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge control module, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated DTCs troubleshooting.

DTC P0462: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT LOW VOLTAGE**NOTE:**

Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0462 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit.

4. Turn the ignition switch OFF.
5. Remove the second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
6. Remove the access panel from the floor.
7. Disconnect the fuel tank unit 4P connector.
8. Turn the ignition switch ON (II).
9. Clear the DTC with the HDS, and wait 5 seconds.
10. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0463 indicated?

YES - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**), then go to step 22.

NO - Go to step 11.

11. Turn the ignition switch OFF.
12. Remove the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).
13. Disconnect gauge control module connector A (12P).
14. Check for continuity between fuel tank unit 4P connector terminal No. 1 and body ground.

FUEL TANK UNIT 4P CONNECTOR

Wire side of female terminals

Fig. 3: Identifying Continuity Between Fuel Tank Unit 4P Connector Terminal No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the gauge control module (signal line) and the fuel gauge sending unit, then go to step 23.

NO - Go to step 15.

15. Reconnect gauge control module connector A (12P).
16. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL AND INSTALLATION**).
17. Connect the fuel tank unit 4P connector.
18. Turn the ignition switch ON (II).
19. Clear the DTC with the HDS.
20. Set the float (A) to the E position.

Fig. 4: Identifying Float

Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Check the fuel gauge.

Does the fuel gauge move to the empty position?

YES - Go to step 29.

NO - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), then go to step 22.

22. Turn the ignition switch OFF.
23. Install the parts in the reverse order of removal.
24. Reconnect all connectors.
25. Turn the ignition switch ON (II).
26. Reset the PCM with the HDS.
27. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
28. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0462 indicated?

YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge control

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel Supply System - MDX

module, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

29. Turn the ignition switch OFF.
30. Install the parts in the reverse order of removal.
31. Reconnect all connectors.
32. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
33. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0462 indicated?

YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge control module. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

DTC P0463: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT HIGH VOLTAGE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS, and wait 5 seconds.
3. Check for Temporary DTCs or DTCs in the DTCs MENU with the HDS.

Is DTC P0463 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the gauge control module and the fuel gauge sending unit.

4. Turn the ignition switch OFF.
5. Remove the second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
6. Remove the access panel from the floor.
7. Disconnect the fuel tank unit 4P connector.
8. Connect fuel tank unit 4P connector terminal No. 3 to body ground with a jumper wire.

FUEL TANK UNIT 4P CONNECTOR

Wire side of female terminals

Fig. 5: Identifying Fuel Tank Unit 4P Connector Terminal No. 3 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).
10. Disconnect gauge control module connector B (24P).
11. Check for continuity between gauge control module connector B (24P) terminal No. 15 and body ground.

GAUGE CONTROL MODULE CONNECTOR B (24P)

Wire side of female terminals

Fig. 6: Identifying Continuity Between Gauge Control Module Connector B (24P) Terminal No. 15 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair open in the wire between the gauge control module (GND line) and the fuel gauge sending unit, then go to step 24.

12. Connect fuel tank unit 4P connector terminal No. 1 to body ground with a jumper wire.

FUEL TANK UNIT 4P CONNECTOR

Wire side of female terminals

Fig. 7: Identifying Fuel Tank Unit 4P Connector Terminal No. 1 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check for continuity between gauge control module connector A (12P) terminal No. 11 and body ground.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 8: Identifying Continuity Between Gauge Control Module Connector A (12P) Terminal No. 11 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 14.

NO - Repair open in the wire between the gauge control module (signal line) and the fuel gauge sending unit, then go to step 24.

14. Remove the jumper wire from the fuel tank unit 4P connector.
15. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL AND INSTALLATION**).
16. Test the fuel gauge sending unit (see **FUEL GAUGE SENDING UNIT TEST**).

Is the fuel gauge sending unit OK?

YES - Go to step 17.

NO - Replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT**).

REPLACEMENT), then go to step 24.

17. Connect the fuel tank unit 4P connector.
18. Reconnect gauge control module connector A (12P).
19. Turn the ignition switch ON (II).
20. Clear the DTC with the HDS.
21. Set the float (A) to the F position.

Fig. 9: Identifying Gauge Control Module Connector A (12P)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Check the fuel gauge.

Does the gauge move to the full position?

YES - Go to step 30.

NO - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**), then go to step 24.

23. Turn the ignition switch OFF.
24. Install the parts in the reverse order of removal.
25. Reconnect all connectors.
26. Turn the ignition switch ON (II).
27. Reset the PCM with the HDS.
28. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
29. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0463 indicated?

YES - Check for poor connections or loose terminals at the gauge control module and the fuel gauge

sending unit, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

30. Turn the ignition switch OFF.
31. Install the parts in the reverse order of removal.
32. Reconnect all connectors.
33. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
34. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0463 indicated?

YES - Check for poor connections or loose terminals at the fuel gauge sending unit and the gauge control module. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs TROUBLESHOOTING**.

DTC P0627: FUEL PUMP CONTROL MODULE SYSTEM MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to the start (III) position.

NOTE: This vehicle has an auto control mode starting system. It keeps the starter motor running after the ignition switch is released for 15 seconds, or until the engine starts.

4. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0627 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the fuel pump control module, PGM-FI main relay 2, the fuel tank unit, and the PCM.

5. Turn the ignition switch OFF.
6. Check the No. 19 FUEL PUMP (20 A) fuse in under-dash fuse/relay box.

Is the fuse blown?

YES - Replace the under-dash fuse/relay box. Also replace the No. 19 FUEL PUMP (20 A) fuse, then go to step 73.

NO - Go to step 7.

7. Disconnect the fuel pump control module 10P connector (see **FUEL PUMP CONTROL MODULE REPLACEMENT**).
8. Turn the ignition switch ON (II), and measure voltage between fuel pump control module 10P connector terminals No. 3 and No. 8 within 2 seconds.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 10: Measuring Voltage Between Fuel Pump Control Module 10P Connector Terminals No. 3 And No. 8

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 27.

NO - Go to step 9.

9. Turn the ignition switch OFF.
10. Remove the left kick panel (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**), then remove PGM-FI main relay 2 (G) from the under-dash fuse/relay box.

Fig. 11: Identifying PGM-FI Main Relay 2 (G) From Under-Dash Fuse/Relay Box
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Test PGM-FI main relay 2 (see **POWER RELAY TEST**).

Is PGM-FI main relay 2 OK?

YES - Go to step 12.

NO - Replace PGM-FI main relay 2, then go to step 73.

12. Turn the ignition switch ON (II).
13. Measure voltage between PGM-FI main relay 2 4P connector terminal No. 4 and body ground.

PGM-FI MAIN RELAY 2 4P CONNECTOR

Terminal side of female terminals

Fig. 12: Identifying Voltage Between PGM-FI Main Relay 2 4P Connector Terminal No. 4 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 18.

NO - Go to step 14.

14. Turn the ignition switch OFF.
15. Disconnect under-hood fuse/relay box connector H (9P).
16. Connect PGM-FI main relay 2 4P connector terminal No. 4 to body ground with a jumper wire.

PGM-FI MAIN RELAY 2 4P CONNECTOR

Terminal side of female terminals

Fig. 13: Identifying PGM-FI Main Relay 2 4P Connector Terminal No. 4 To Body Ground With Jumper Wire

17. Check for continuity between under-hood fuse/ relay box connector H (9P) terminal No. 1 and body ground.

UNDER-HOOD FUSE/RELAY BOX CONNECTOR H (9P)

Wire side of female terminals

Fig. 14: Identifying Continuity Between Under-Hood Fuse/ Relay Box Connector H (9P) Terminal No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the relay control module (under-hood fuse/relay box) (see **REMOVAL AND INSTALLATION**), then go to step 74.

NO -

- Repair open in the wire between the under-hood fuse/relay box and the under-dash fuse/relay box, then go to step 74.
- If needed, replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then

go to step 74.

18. Measure voltage between PGM-FI main relay 2 4P connector terminal No. 1 and body ground.

PGM-FI MAIN RELAY 2 4P CONNECTOR

Terminal side of female terminals

Fig. 15: Identifying Voltage Between PGM-FI Main Relay 2 4P Connector Terminal No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 19.

NO - Replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then go to step 73.

19. Turn the ignition switch OFF.
20. Connect PGM-FI main relay 2 4P connector terminals No. 1 and No. 2 with a jumper wire.

PGM-FI MAIN RELAY 2 4P CONNECTOR

Terminal side of female terminals

Fig. 16: Identifying PGM-FI Main Relay 2 4P Connector Terminals No. 1 And No. 2 With Jumper Wire

21. Turn the ignition switch ON (II), and measure voltage between fuel pump control module 10P connector terminal No. 3 and body ground within 2 seconds.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 17: Identifying Voltage Between Fuel Pump Control Module 10P Connector Terminal No. 3 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 22.

NO -

- Repair open in the wire between the under-dash fuse/relay box and the fuel pump control module, then go to step 73.
- If needed, replace the under-dash fuse/relay box (see **REMOVAL AND INSTALLATION**), then go to step 73.

22. Turn the ignition switch OFF.
23. Jump the SCS line with the HDS.
24. Disconnect PCM connector A (49P).
25. Connect PGM-FI main relay 2 4P connector terminal No. 3 to body ground with a jumper wire.

PGM-FI MAIN RELAY 2 4P CONNECTOR

Terminal side of female terminals

Fig. 18: Identifying PGM-FI Main Relay 2 4P Connector Terminal No. 3 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Check for continuity between PCM connector terminal A11 and body ground.

Fig. 19: Identifying Continuity Between PCM Connector Terminal And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 79.

NO - Repair open in the wire between the PCM (A11) and PGM-FI main relay 2, then go to step 73.

27. Turn the ignition switch OFF.
28. Reconnect the fuel pump control module 10P connector (see **FUEL PUMP CONTROL MODULE REPLACEMENT**).
29. Turn the ignition switch ON (II).
30. Clear the DTC with the HDS.
31. Turn the ignition switch OFF.
32. Turn the ignition switch ON (II), and check for sound from the fuel pump within 2 seconds.

Does the fuel pump operate?

YES - Go to step 33.

NO - Go to step 53.

33. Turn the ignition switch OFF.
34. Disconnect the fuel pump control module 10P connector.
35. Check for continuity between fuel pump control module 10P connector terminal No; 4 and body ground.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 20: Identifying Continuity Between Fuel Pump Control Module 10P Connector Terminal No; 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 36.

NO - Go to step 39.

36. Jump the SCS line with the HDS.
37. Disconnect PCM connector A (49P).
38. Check for continuity between PCM connector terminal A42 and body ground.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 21: Identifying Continuity Between PCM Connector Terminal A42 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A42) and the fuel pump control module, then go to step 73.

NO - Go to step 79.

39. Jump the SCS line with the HDS.
40. Disconnect PCM connector A (49P).
41. Connect fuel pump control module 10P connector terminal No. 4 to body ground with a jumper wire.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

42. Check for continuity between PCM connector terminal A42 and body ground.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 23: Identifying Continuity Between PCM Connector Terminal A42 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 43.

NO - Repair open in the wire between the PCM (A42) and the fuel pump control module, then go to step 73.

43. Remove the jumper wire from the fuel pump control module 10P connector.
44. Reconnect the fuel pump control module 10P connector and PCM connector A (49P).
45. Turn the ignition switch ON (II).

46. Measure voltage between fuel pump control module 10P connector terminal No. 4 and body ground.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 24: Identifying Voltage Between Fuel Pump Control Module 10P Connector Terminal No. 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 8 V or more?

YES - Go to step 47.

NO - Replace the fuel pump control module (see **FUEL PUMP CONTROL MODULE REPLACEMENT**), then go to step 73.

47. Turn the ignition switch OFF.
 48. Remove the second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
 49. Remove the access panel from the floor.
 50. Disconnect the fuel tank unit 4P connector.
 51. Disconnect the fuel pump control module 10P connector.
 52. Check for continuity between fuel pump control module 10P connector terminal No. 7 and body ground.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 25: Identifying Continuity Between Fuel Pump Control Module 10P Connector Terminal No. 7 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the fuel pump control module (FP- line) and the fuel tank unit, then go to step 73.

NO - Substitute a known-good fuel pump control module (see **FUEL PUMP CONTROL MODULE REPLACEMENT**), then go to step 73 and recheck. If DTC P0627 is not indicated, replace the original fuel pump control module (see **FUEL PUMP CONTROL MODULE REPLACEMENT**), then go to step 73. If DTC P0627 is indicated, go to step 80.

53. Turn the ignition switch OFF.
54. Disconnect the fuel pump control module 10P connector (see **FUEL PUMP CONTROL MODULE REPLACEMENT**).
55. Check for continuity between fuel pump control module 10P connector terminal No. 8 and body ground.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 26: Identifying Continuity Between Fuel Pump Control Module 10P Connector Terminal No. 8 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 56.

NO - Repair open in the wire between the fuel pump control module (GND line) and G604, then go to step 73.

56. Check for continuity between fuel pump control module 10P connector terminal No. 5 and body ground.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 27: Identifying Continuity Between Fuel Pump Control Module 10P Connector Terminal No. 5 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 57.

NO - Go to step 60.

57. Jump the SCS line with the HDS.
58. Disconnect PCM connector A (49P).
59. Check for continuity between PCM connector terminal A43 and body ground.

PCM CONNECTOR A (49P)

Terminal side of female terminals

Fig. 28: Identifying Continuity Between PCM Connector Terminal A43 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A43) and the fuel pump control module, then go to step 73.

NO - Go to step 79.

60. Reconnect the fuel pump control module 10P connector.
61. Turn the ignition switch ON (II), and measure voltage between fuel pump control module 10P connector terminal No. 5 and body ground within 2 seconds.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 29: Identifying Voltage Between Fuel Pump Control Module 10P Connector Terminal No. 5 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 62.

NO - Replace the fuel pump control module (see **FUEL PUMP CONTROL MODULE REPLACEMENT**), then go to step 73.

62. Turn the ignition switch OFF.
63. Remove the second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
64. Remove the access panel from the floor.
65. Disconnect the fuel tank unit 4P connector.
66. Disconnect the fuel pump control module 10P connector (see **FUEL PUMP CONTROL MODULE REPLACEMENT**).
67. Connect between fuel tank unit 4P connector terminal No. 2 to body ground with a jumper wire.

FUEL TANK UNIT 4P CONNECTOR

Wire side of female terminals

Fig. 30: Identifying Fuel Tank Unit 4P Connector Terminal No. 2 To Body Ground With Jumper

Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

68. Check for continuity between fuel pump control module 10P connector terminal No. 6 and body ground.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 31: Identifying Continuity Between Fuel Pump Control Module 10P Connector Terminal No. 6 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

*Is there continuity?***YES** - Go to step 69.**NO** - Repair open in the wire between the fuel pump control module (FP+ line) and the fuel tank unit, then go to step 73.

69. Connect between fuel tank unit 4P connector terminal No. 4 to body ground with a jumper wire.

FUEL TANK UNIT 4P CONNECTOR

Wire side of female terminals

Fig. 32: Identifying Fuel Tank Unit 4P Connector Terminal No. 4 To Body Ground With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

70. Check for continuity between fuel pump control module 10P connector terminal No. 7 and body ground.

FUEL PUMP CONTROL MODULE 10P CONNECTOR

Wire side of female terminals

Fig. 33: Identifying Continuity Between Fuel Pump Control Module 10P Connector Terminal No. 7 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 71.

NO - Repair open in the wire between the fuel pump control module (FP- line) and the fuel tank unit, then go to step 73.

71. Remove the jumper wire from the fuel tank unit 4P connector terminal No. 4, and reconnect the fuel pump control module 10P connector.
72. Turn the ignition switch ON (II), and measure voltage between fuel tank unit 4P connector terminal No. 2 and body ground within 2 seconds.

FUEL TANK UNIT 4P CONNECTOR

Wire side of female terminals

Fig. 34: Identifying Voltage Between Fuel Tank Unit 4P Connector Terminal No. 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the fuel tank unit (see **FUEL TANK UNIT REMOVAL AND INSTALLATION**), then go to step 73.

NO - Substitute a known-good fuel pump control module (see **FUEL PUMP CONTROL MODULE**

REPLACEMENT), then go to step 73 and recheck. If DTC P0627 is not indicated, replace the original fuel pump control module (see **FUEL PUMP CONTROL MODULE REPLACEMENT**), then go to step 73. If DTC P0627 is indicated, go to step 80.

73. Turn the ignition switch OFF.
74. Reconnect all connectors.
75. Turn the ignition switch ON (II).
76. Reset the PCM with the HDS.
77. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
78. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0627 indicated?

YES - Check for poor connections or loose terminals at the fuel pump control module, PGM-FI main relay 2, the fuel tank unit, and the PCM, then go to step 1.

NO - Troubleshooting is complete. If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs troubleshooting**.

79. Reconnect all connectors.
80. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
81. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0627 indicated?

YES - Check for poor connections or loose terminals at the fuel pump control module, PGM-FI main relay 2, the fuel pump, and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs are indicated, go to the indicated **DTCs TROUBLESHOOTING**.

FUEL PRESSURE RELIEVING

Before disconnecting fuel lines or hoses, relieve pressure from the system by disabling the fuel pump and then disconnecting the fuel tube/quick connect fitting in the engine compartment.

WITH THE HDS

1. Turn the ignition switch to LOCK (0).
2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 35: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch ON (II).
4. Make sure the HDS communicates with the PCM. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Turn the ignition switch LOCK (0).
6. Remove the fuel fill cap to relieve the pressure in the fuel tank.
7. Turn the ignition switch to ON (II).
8. From the INSPECTION MENU of the HDS, select Fuel Pump OFF, then start the engine, and let it idle until it stalls.

NOTE:

- Do not allow the engine to idle above 1,000 rpm or the PCM will continue to operate the fuel pump.
- A DTC or a Temporary DTC may be set during this procedure. Check for DTCs, and clear them as needed (see **CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN**).

9. Turn the ignition switch to LOCK (0).
10. Do the battery terminal disconnection procedure (See **DISCONNECTION**).
11. Remove the quick-connect fitting cover (A).

Fig. 36: Identifying Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check the fuel quick-connect fitting for dirt, and clean it if needed.
13. Place a rag or shop towel over the quick-connect fitting (A).

Fig. 37: Identifying Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Disconnect the quick-connect fitting (A): Hold the connector (B) with one hand, and squeeze the retainer tabs (C) with the other hand to release them from the locking tabs (D). Pull the connector off.

NOTE:

- Be careful not to damage the line (E) or other parts.
- Do not use tools.
- If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.
- Do not remove the retainer from the line; once removed, the retainer

must be replaced with a new one.

Fig. 38: Identifying Pulling And Pushing Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. After disconnecting the quick-connect fitting, check it for dirt or damage (see step 4).
16. Do the battery terminal reconnection procedure (see **RECONNECTION**).

WITHOUT THE HDS

1. Remove PGM-FI main relay 2 (G) from the under-dash fuse/relay box.

Fig. 39: Identifying PGM-FI Main Relay 2 (G) From Under-Dash Fuse/Relay Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Start the engine, and let it idle until it stalls.

NOTE: If any DTCs are stored, clear and ignore them.

3. Turn the ignition switch OFF.
4. Remove the fuel fill cap to relieve the pressure in the fuel tank.
5. Do the battery terminal disconnection procedure (see **DISCONNECTION**).

6. Remove the quick-connect fitting cover (A).

Fig. 40: Identifying Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Check the fuel quick-connect fitting for dirt, and clean it if needed.
8. Place a rag or shop towel over the quick-connect fitting (A).

Fig. 41: Identifying Quick-Connect Fitting
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the quick-connect fitting (A): Hold the connector (B) with one hand, and squeeze the retainer tabs (C) with the other hand to release them from the locking tabs (D). Pull the connector off.

NOTE:

- Be careful not to damage the line (E) or other parts.
- Do not use tools.
- If the connector does not move, keep the retainer tabs pressed down,

and alternately pull and push the connector until it comes off easily.

- Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.

Fig. 42: Identifying Retainer Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. After disconnecting the quick-connect fitting, check it for dirt or damage (see step 4).
11. Do the battery terminal reconnection procedure (see **RECONNECTION**).

FUEL PRESSURE TEST

Special Tools Required

- Fuel pressure gauge 07406-004000B
 - Fuel pressure gauge attachment set 07AAJ-S6MA150
1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
 2. Disconnect the quick-connect fitting. Attach the fuel pressure gauge set and the fuel pressure gauge.

Fig. 43: Identifying Fuel Pressure Gauge Set And Fuel Pressure Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Start the engine, and let it idle.
 - If the engine starts, go to step 5.
 - If the engine does not start, go to step 4.
4. Check to see if the fuel pump is running: Listen to the fuel filler port with the fuel fill cap removed. The fuel pump should run for 2 seconds when the ignition switch is first turned on.
 - If the pump runs, go to step 5.
 - If the pump does not run, refer to the DTC troubleshooting (see **DTC P0627: Fuel Pump Control Module System Malfunction**).
5. Read the fuel pressure gauge. The pressure should be 390-440 kPa (4.0-4.5 kgf/cm² , 57-64 psi).
 - If the pressure is OK, the test is complete.
 - If the pressure is out of specification, replace the fuel pressure regulator (see **FUEL PRESSURE REGULATOR REPLACEMENT**) and the fuel filter (see **FUEL FILTER REPLACEMENT**), then recheck the fuel pressure.

FUEL TANK DRAINING

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL AND INSTALLATION**).
2. Using a hand pump, a hose, and a container suitable for fuel, draw the fuel from the fuel tank.
3. Reinstall the fuel tank unit (see **FUEL TANK UNIT REMOVAL AND INSTALLATION**).

FUEL LINE INSPECTION

Check the fuel system lines and hoses for damage, leaks, and deterioration. Replace any damaged parts.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel Supply System - MDX

Make sure the connections are secure and the quick-connect fitting covers are firmly locked in place.

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS

The fuel line/quick-connect fittings (A), (B), (C), (D), (E), (F), (G), (H), (I), (J) connect the fuel feed hose (K) to the fuel feed hose (L), the fuel feed hose to the fuel feed line (M), the fuel feed line to the fuel feed hose (N), the fuel feed hose to the fuel tank unit (O), the fuel tank vapor recirculation tube (P) to the vent return pipe (Q), the vent return pipe to the vent return tube (R), the vent return tube to the breather pipe (S), the EVAP canister (T) to the purge tube (U), the fuel purge tube to the fuel purge line (V), the fuel tank vapor control valve hose (W) and the fuel tank vapor/liquid separation valve tube (X). When removing or installing the fuel feed hose, the fuel tank unit, the fuel tank, or the fuel tank vapor recirculation tube, it is necessary to disconnect or connect the quick-connect fittings. Pay attention to the following:

- The fuel feed hoses, fuel line, and quick-connect fittings are not heat-resistant; be careful not to damage them during welding or other heat-generating procedures.
- The fuel feed hoses, fuel line, and quick-connect fittings are not acid-proof; do not touch them with a shop towel that was used for wiping battery electrolyte. Replace them if they came into contact with electrolyte or something similar.
- When connecting or disconnecting the fuel feed hoses, fuel line, and quick-connect fittings, be careful not to bend or twist them excessively. Replace them if they are damaged.

Fig. 46: Identifying Fuel Line/Quick-Connect Fittings And Fuel Feed Hose

Fig. 47: Identifying Fuel Line/Quick-Connect Fittings And Fuel Feed Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 48: Identifying Fuel Tank Unit

Courtesy of AMERICAN HONDA MOTOR CO., INC.

A disconnected quick-connect fitting can be reconnected, but the retainer on the mating line cannot be reused once it has been removed from the line. Replace the retainer when:

- replacing the fuel rail.
- replacing the fuel feed line.
- replacing the fuel pump;
- replacing the fuel filter.
- replacing the fuel gauge sending unit.
- replacing the EVAP purge line.
- replacing the EVAP canister.
- replacing the fuel fill pipe.
- it has been removed from the line.
- it is damaged

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel Supply System - MDX

MANUFACTURER LIST

Location	Manufacturer	Retainer color	Line diameter
A	Tokai DTR	Blue green	0.31 in. (8.0 mm)
B	Tokai DTR	Blue green	0.31 in. (8.0 mm)
C	TI Automotive	Gray	0.31 in. (8.0 mm)
D	TI Automotive	Blue	0.37 in. (9.5 mm)
E	Tokai DTR	Orange	0.37 in. (9.5 mm)
F	Tokai	Orange	0.37 in. (9.5 mm)
G	Tokai	Natural	0.47 in. (12 mm)
H	TI Automotive	Blue	0.37 in. (9.5 mm)
I	TI Automotive	Natural	0.47 in. (12 mm)
J	Toyoda Gosei North America	White	0.31 in. (8.0 mm)

FUEL LINE/QUICK-CONNECT FITTING REMOVAL

NOTE: Before you work on the fuel lines and fittings, read the "Fuel Line/Quick-Connect Fitting Precautions" (see FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS).

1. Relieve the fuel pressure (see FUEL PRESSURE RELIEVING).
2. Check the fuel quick-connect fittings (A) for dirt, and clean them if needed.

Fig. 49: Identifying Fuel Quick-Connect Fittings (1 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 50: Identifying Fuel Quick-Connect Fittings (2 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 51: Identifying Fuel Quick-Connect Fittings (3 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Place a rag or shop towel over the quick-connect fitting. Hold the connector (A) with one hand, and squeeze the retainer tabs (B) with the other hand to release them from the locking tabs (C). Pull the connector off.

NOTE:

- Be careful not to damage the line (D) or other parts. Do not use tools.
- If the connector does not move, keep the retainer tabs pressed down, and alternately pull and push the connector until it comes off easily.
- Do not remove the retainer from the line; once removed, the retainer must be replaced with a new one.

Fig. 52: Identifying Pulling And Pushing Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the contact area (A) of the line (B) for dirt or damage.
 - If it is dirty, clean the connector, and dry it with the compressed air.
 - If it is rusty or damaged, replace the fuel pump, the fuel filter, or the fuel feed line.

Fig. 53: Identifying Contact Area Of Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. To prevent damage and keep foreign matter out, cover the disconnected connector and line ends with plastic bags (A).

NOTE: The retainer cannot be reused once it has been removed from the line.
Replace the retainer when:

- replacing the fuel rail.
- replacing the fuel feed line.
- replacing the fuel pump.
- replacing the fuel filter.
- replacing the fuel gauge sending unit.
- replacing the EVAP purge line.
- replacing the EVAP canister.
- replacing the fuel fill pipe.
- it has been removed from the line.
- it is damaged.

Fig. 54: Identifying Covering Connector With Plastic Bags

Courtesy of AMERICAN HONDA MOTOR CO., INC.

FUEL LINE/QUICK-CONNECT FITTING INSTALLATION

NOTE: Before you work on the fuel lines and fittings, read the "Fuel Line/Quick-Connect Fitting Precautions" (see FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS).

1. Check the contact area (A) of the line (B) for dirt or damage, and clean it if needed.

Fig. 55: Identifying Contact Area Of Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert a new retainer (A) into the connector (B) if the retainer is damaged, or after:
 - replacing the fuel rail.
 - replacing the fuel feed line.
 - replacing the fuel pump.
 - replacing the fuel filter.
 - replacing the fuel gauge sending unit.
 - replacing the EVAP purge line.
 - replacing the EVAP canister.
 - replacing the fuel fill pipe.
 - removing the retainer from the line.
- Use the same manufacturer retainer and the same size retainer when the replacing the retainer (see FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS).

Fig. 56: Identifying Retainer Into Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Before connecting a new fuel tube/quick-connect fitting assembly (A), remove the old retainer (B) from the mating line.

Fig. 57: Identifying Fuel Tube/Quick-Connect Fitting Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 58: Identifying Fuel Tube/Quick-Connect Fitting Assembly And Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Align the quick-connect fittings with the line (A), and align the retainer locking tabs (B) with the

connector grooves (C). Then press the quick-connect fittings onto the line until both retainer tabs lock with a clicking sound.

NOTE: If it is hard to connect, put a small amount of new engine oil on the line end.

Connection with new retainer

Connection with new retainer

Connection to new fuel line

Reconnection to existing retainer

Fig. 59: Identifying Retainer Locking Tabs With Connector Grooves
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. When you are reconnecting the connector with the old retainer, make sure the connection is secure and the tabs (A) are firmly locked into place; check visually and also by pulling the connector (B). When you are replacing the fuel line with a new one, make sure you remove the ring pull (C) upwards after you confirm the connection is secure.

NOTE: Before you remove the ring pull, make sure the fuel line connection is secure. If the connection is not secure, the ring pull could break when you try to remove it.

Reconnection to existing retainer

Fig. 60: Identifying Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connection to new fuel line

Fig. 61: Identifying Fuel Line

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Reconnect the negative cable to the battery, and turn the ignition switch ON (II) (but do not operate the

starter motor). The fuel pump will run for about 2 seconds, and fuel pressure will rise. Repeat two or three times, and check that there is no leakage in the fuel supply system.

FUEL TANK UNIT REMOVAL AND INSTALLATION

Special Tools Required

Fuel sender wrench 07AAA-S0XA100

REMOVAL

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Remove the second row seat (see **SECOND ROW SEAT REMOVAL/INSTALLATION**).
3. Remove the access panel (A) from the floor.

Fig. 62: Identifying Access Panel From Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the fuel tank unit 4P connector (B).
5. Disconnect the quick-connect fitting (C) from the fuel tank unit.
6. Using the fuel sender wrench, loosen the locknut (A).

Fig. 63: Identifying Locknut

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the locknut (A), locknut plate (B), and fuel tank unit (C).

Fig. 64: Identifying Locknut, Locknut Plate, And Fuel Tank Unit

Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Temporarily attach a new base gasket (A) to the fuel tank unit (B), then insert the fuel tank unit partially into the fuel tank.

NOTE:

- Be careful not to damage the new base gasket.

- Be careful not to bend the fuel gauge sending unit.
- Do not coat the base gasket with oil.

Fig. 65: Identifying Fuel Tank Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Transfer the base gasket (A) from the fuel tank unit to the fuel tank.

Fig. 66: Identifying Transfer Base Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the marks (B) on the fuel tank and the fuel tank unit, then insert the fuel tank unit into the fuel tank until it sits on the base gasket.

NOTE: To prevent a fuel leak, check the base gasket, visually or by hand, to make sure it is not pinched.

4. Using the tool, tighten the new locknut (A) with a new locknut plate (B) to the specified torque.

NOTE:

- Before tightening, align the marks (C) on the fuel tank and the locknut.
- After tightening, make sure the marks are still aligned.
- After installation, check the base gasket visually or by hand to be sure it is not pinched.

Fig. 67: Identifying Marks On Fuel Tank And Locknut With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the fuel tank unit 4P connector.
6. Reconnect the quick-connect fitting to the fuel tank unit.
7. Do the battery terminal reconnection procedure(see RECONNECTION).
8. Turn the ignition switch to ON (II) (but do not operate the starter motor). The fuel pump will run for about 2 seconds, and fuel pressure will rise. Repeat two or three times, and check that there is no leakage in the fuel supply system.
9. Install the access panel on the floor.
10. Install the second row seat (see SECOND ROW SEAT REMOVAL/INSTALLATION).

FUEL PRESSURE REGULATOR REPLACEMENT

1. Remove the fuel tank unit (see FUEL TANK UNIT REMOVAL AND INSTALLATION).
2. Remove the reservoir (A).

Fig. 68: Identifying Reservoir

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bracket (A).

Fig. 69: Identifying Fuel Pressure Regulator, Clip And Bracket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clip (B).
5. Remove the fuel pressure regulator (C).
6. Install the parts in the reverse order of removal with new O-rings (D).

NOTE: Coat the O-rings with clean engine oil; do not use any other oils or fluids.
Do not pinch the O-rings during installation.

FUEL FILTER REPLACEMENT

The fuel filter should be replaced whenever the fuel pressure drops below the specified value (see **FUEL PRESSURE TEST**), after making sure that the fuel pump and the fuel pressure regulator are OK.

1. Remove the fuel tank unit (see **FUEL TANK DRAINING**).
2. Remove the fuel filter set (A).

Fig. 70: Identifying Fuel Filter Set And Fuel Gauge Sending Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check these items before installing the fuel tank unit:
 - When connecting the wire harness, make sure the connection is secure and the connectors (B) are firmly locked into place.
 - When installing the fuel gauge sending unit (C), make sure the connection is secure and the connector is firmly locked into place. Be careful not to bend or twist it excessively.
4. Install the parts in the reverse order of removal with new O-rings (D). When installing the fuel tank unit, align the marks on the unit and the fuel tank (see **INSTALLATION**).

NOTE: Coat the O-rings with clean engine oil.

FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT

1. Remove the fuel tank unit (see **FUEL TANK UNIT REMOVAL AND INSTALLATION**).
2. Remove the fuel level sensor (fuel sending unit) (A) from the fuel tank unit (B).

Fig. 71: Identifying Fuel Level Sensor From Fuel Tank Unit
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check these items before installing the fuel tank unit:
 - When connecting the wire harness, make sure the connection is secure and the connector (C) is firmly locked into place.
 - When installing the fuel gauge sending unit, make sure the connection is secure and the connector is firmly locked into place. Be careful not to bend or twist it excessively.
4. Install the parts in the reverse order of removal. When installing the fuel tank unit, align the marks on the unit and the fuel tank (see **INSTALLATION**).

FUEL TANK REPLACEMENT

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Drain the fuel tank (see **FUEL TANK DRAINING**), then disconnect the fuel tank unit 4P connector and the quick-connect fittings from the fuel tank unit.
3. Raise the vehicle on a lift.
4. Remove the exhaust pipe (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**).
5. Remove the propeller shaft (see **PROPELLER SHAFT REMOVAL**), and support it with jackstands.
6. Remove the fuel tank guard (A) and fuel tank protector (B).

Fig. 72: Identifying Fuel Tank Guard, Fuel Tank Protector, Clamp And Hoses With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Loosen the clamp (C), and disconnect the tube (D). Slide back the clamps, then twist the hoses as you pull to avoid damaging them.
8. Open the clamps (E).
9. Disconnect the hoses (F).
10. Place a jack or other support under the fuel tank (G).
11. Remove the strap bolts and the straps (H).
12. Remove the fuel tank.
13. Install the parts in the reverse order of removal.

FUEL FILL PIPE REMOVAL/INSTALLATION

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Drain the fuel tank (see **FUEL TANK DRAINING**).
3. Remove the fuel fill cap.
4. Remove the rear fender cover (see **REAR FENDER COVER REPLACEMENT**).
5. Disconnect the fuel fill tube (A) and the quick-connector fittings (B).

Fig. 73: Identifying Fuel Fill Tube And Quick-Connector Fittings With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the fuel fill pipe (C).
7. Install the parts in the reverse order of removal.

FUEL PUMP CONTROL MODULE REPLACEMENT

1. Remove the cargo floor lid (see step 1 **TRIM REMOVAL/INSTALLATION - CARGO AREA**).
2. On models with active suspension, remove the active damper control unit (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**).
3. Disconnect the fuel pump control module connector (A).

Fig. 74: Identifying Fuel Pump Control Module Connector With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the fuel pump control module (B).
5. Install the parts in the reverse order of removal.

FUEL GAUGE SENDING UNIT TEST

NOTE: For the fuel gauge system circuit diagram, refer to the Gauges Circuit Diagram (see CIRCUIT DIAGRAM).

1. Check the No. 21 METER (7.5 A) fuse in the under-dash fuse/relay box before testing.
2. Check for body electrical system DTCs (see GENERAL TROUBLESHOOTING INFORMATION).
 - If no problem is found, go to step 3.
 - If DTC B1175 (see DTC B1175: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT OPEN) or B1176 (see DTC B1176: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT SHORT) is indicated, go to the indicated DTCS TROUBLESHOOTING.
3. Turn the ignition switch LOCK (0).
4. Remove the second row seat (see SECOND ROW SEAT REMOVAL/INSTALLATION).
5. Remove the access panel (A) from the floor.

Fig. 75: Identifying Access Panel From Floor And Screws
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the fuel tank unit 4P connector (B).
7. Measure voltage between fuel tank unit 4P connector terminals No. 1 and No. 3 with the ignition switch ON (II). There should be battery voltage.
 - If the voltage is OK, go to step 8.
 - If the voltage is not as specified, check for:
 - a short in the ORN wire to ground.
 - an open in the ORN or LT GRN wire.

FUEL TANK UNIT 4P CONNECTOR

Wire side of female terminals

Fig. 76: Identifying Voltage Between Fuel Tank Unit 4P Connector Terminals No. 1 And No. 3 With Ignition Switch
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Turn the ignition switch OFF.
9. Remove the fuel tank unit from the fuel tank (see **FUEL TANK UNIT REMOVAL AND INSTALLATION**).
10. Measure resistance between fuel tank unit 4P connector terminals No. 1 and No. 3 with the float at E (EMPTY), LOW (LOW FUEL INDICATOR), 1/2 (HALF FULL), and F (FULL) positions. If you do not

get the following readings, replace the fuel gauge sending unit (see **FUEL PUMP/FUEL GAUGE SENDING UNIT REPLACEMENT**).

FLOAT POSITION SPECIFICATION

Float Position	F 8.4 in. (214.2 mm)	1/2 5.9 in. (149.4 mm)	LOW 2.0 in. (50.8 mm)	E 0.8 in. (19.1 mm)
Resistance (ohms)	19 to 21	203.3 to 213.3	516.4 to 629	772 to 788

Fig. 77: Identifying Resistance Between Fuel Tank Unit 4P Connector Terminals No. 1 And No. 3 With Float

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Reconnect the fuel tank unit 4P connector.
12. Remove the No. 7 BACK UP (10 A) fuse from the under-dash fuse/relay box for at least 10 seconds, then reinstall it.
13. Turn the ignition switch ON (II).
14. Check that the pointer of the fuel gauge indicates "F" with the float at F.
 - If the pointer of the fuel gauge does not indicate "F", replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).
 - If the gauge is OK, the test is complete.

NOTE:

- The pointer of the fuel gauge returns to the bottom of the gauge dial when the ignition switch is LOCK (0), regardless of the fuel level.
- Remove the No. 7 BACK UP (10 A) fuse from the under-dash fuse/relay box for at least 10 seconds after completing troubleshooting, otherwise it may take up to 20 minutes for the fuel gauge to indicate the correct fuel level.

LOW FUEL INDICATOR TEST

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Fuel Supply System - MDX

1. Do the gauge self-diagnostic test (see **SELF-DIAGNOSTIC FUNCTION**).
 - If the low fuel indicator flashes, go to step 2.
 - If the low fuel indicator does not flash, replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).
2. Check for body electrical system DTCs.
 - If any DTCs are indicated, do the indicated DTCs troubleshooting.
 - If no DTCs are indicated, go to step 3.
3. Do the fuel gauge sending unit test (see **FUEL GAUGE SENDING UNIT TEST**).

2007-09 ELECTRICAL**Under-Dash Fuse/Relay Box-MDX****REMOVAL AND INSTALLATION**

SRS components are located in this area. Review the SRS component locations (see **COMPONENT INDEX**) and precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before performing repairs or servicing.

REMOVAL

1. Do the battery terminal disconnection procedure, and wait at least 3 minutes.
2. Remove the left kick panel (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
3. Disconnect the connectors from the fuse side of the under-dash fuse/relay box (A).

Fig. 1: Identifying Under-Dash Fuse/Relay Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the mounting bolts, and pull the fuse/relay box away from the body.
5. Disconnect the connectors from the back side of the under-dash fuse/relay box, then remove the under-dash fuse/relay box.
6. Carefully remove the relays by prying under the base of the relay.

NOTE: Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start.

INSTALLATION

2008 Acura MDX

2007-09 ELECTRICAL Under-Dash Fuse/Relay Box-MDX

NOTE: The MICU which is part of the under-dash fuse/ relay box is a component of the immobilizer system. Because of this construction, the MICU must be registered when the under-dash fuse/relay box is replaced, or the vehicle will not start.

1. Install the relays and connect the connectors to the under-dash fuse/relay box, then install the under-dash fuse/relay box in the reverse order of removal.
2. Install the removed parts in the reverse order of removal.
3. Do the battery terminal reconnection procedure(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
4. If the under-dash fuse/relay box is replaced, go to step 5. If the original under-dash fuse/relay box is installed, go to step 10.
5. Connect the HDS to the data link connector.
6. Turn the ignition switch to ON (II).
7. Select the BODY ELECTRICAL, then enter the IMMOBILIZER SETUP.
8. Select the REPLACE MPCS/MICU/IMOES, then select the suitable menu from the HDS indications.
9. After registration, confirm that the vehicle will start.
10. Confirm that all systems work properly.

2007-09 ELECTRICAL

Under-Hood Fuse/Relay Box - MDX

DTC TROUBLESHOOTING

DTC B1051: RELAY CONTROL MODULE INTERNAL (CPU) ERROR; DTC B1052: RELAY CONTROL MODULE INTERNAL (EEPROM) ERROR

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1051 or B1052 indicated?

YES - Faulty relay control module, replace the under-hood fuse/relay box.

NO - Intermittent failure, the system is OK at this time.

DTC B1055: RELAY CONTROL MODULE LOST COMMUNICATION WITH MICU (MICU MESSAGE); DTC B1056: RELAY CONTROL MODULE LOST COMMUNICATION WITH MICU (ALARM MESSAGE); DTC B1057: RELAY CONTROL MODULE LOST COMMUNICATION WITH MICU (DOOR SW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1055, B1056, or B1057 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connection between the relay control module and the MICU.

5. Check for DTCs with the HDS.

Are DTCs B1055, B1056, B1057, B1157, B1159, B1180, B1255, B1955, B2155, B2156, and B2161 all indicated?

2008 Acura MDX

2007-09 ELECTRICAL Under-Hood Fuse/Relay Box - MDX

YES - Do the MICU input test (see MICU INPUT TEST).

NO - Do the relay control module input test (see RELAY CONTROL MODULE INPUT TEST).

DTC B1060: RELAY CONTROL MODULE LOST COMMUNICATION WITH GAUGE CONTROL MODULE (VPS/NE MESSAGE); DTC B1061: RELAY CONTROL MODULE LOST COMMUNICATION WITH GAUGE CONTROL MODULE (A/T MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1060 and/or B1061 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the relay control module and the gauge control module.

5. Check for DTCs with the HDS.

Are DTCs B1011, B1032, B1060, B1061, B1205, B1206, B1207, B1906, B1956, B2157, and B2160 all indicated?

YES - Do the gauge control module input test (see GAUGE CONTROL MODULE INPUT TEST).

NO - Do the relay control module input test (see RELAY CONTROL MODULE INPUT TEST).

DTC B1062: RELAY CONTROL MODULE LOST COMMUNICATION WITH COMBINATION SWITCH CONTROL UNIT (HLSW MESSAGE); DTC B1063: RELAY CONTROL MODULE LOST COMMUNICATION WITH COMBINATION SWITCH CONTROL UNIT (WIPSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

2008 Acura MDX

2007-09 ELECTRICAL Under-Hood Fuse/Relay Box - MDX

Is DTC B1062 and/or B1063 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the relay control module and the combination switch control unit.

5. Check for DTCs with the HDS.

Are DTCs B1007, B1062, B1063, B1155, B1156, B1957, B1958, and B2969 all indicated?

YES - Do the combination switch control unit input test (see **WIPER/WASHER SWITCH (COMBINATION SWITCH CONTROL UNIT) INPUT TEST**).

NO - Do the relay control module input test (see **RELAY CONTROL MODULE INPUT TEST**).

DTC B1065: RELAY CONTROL MODULE LOST COMMUNICATION WITH DRIVER'S MPCS UNIT (DRLOCKSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTCs B1065 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the relay control module and the driver's MPCS unit.

5. Check for DTCs with the HDS.

Are DTCs B1013, B1015, B1065, B1182, and B1905 all indicated?

YES - Do the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

NO - Do the relay control module input test (see **RELAY CONTROL MODULE INPUT TEST**).

REMOVAL AND INSTALLATION

REMOVAL

1. Do the battery terminal disconnection procedure, and wait at least 3 minutes.
2. Remove the cover of the under-hood fuse/relay box, and carefully remove the relays by prying under the base of the relay.

NOTE: Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start.

Fig. 1: Identifying Under-Hood Fuse/Relay Box Relay Block Part And Relay Control Module Part
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the under-hood fuse/relay box from the bracket.
4. Remove the relay block part (A) from the under-hood fuse/relay box.
5. Remove the relay control module part (B) from the under-hood fuse/relay box, then disconnect the connectors from the relay control module.

INSTALLATION

1. Install the relay control module and relays, then connect the connectors to the under-hood fuse/ relay box.
2. Install the cover to the bottom of the under-hood fuse/relay box.
3. Install the under-hood fuse/relay box and the removed parts in the reverse order of removal.
4. Do the battery terminal reconnection procedure.(see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**)
5. Confirm that all systems work properly.

SELF-DIAGNOSTIC FUNCTION

NOTE: Before testing the gauge system, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

The gauge control module has a self-diagnostic function.

- The beeper drive circuit check.
- The indicator drive circuit check.
- The switch input test.
- The LCD segments check.
- The gauges drive circuit check (speedometer, tachometer, fuel gauge, coolant temperature gauge).
- The communication line check (of the body-controller area network (B-CAN) communication line and the fast-controller area network (F-CAN) communication line between the gauges).

NOTE: Indicators are also controlled via the communication line.

ENTERING THE SELF-DIAGNOSTIC FUNCTION

Before doing the self-diagnostic function, check the No. 7 (10 A) fuse and the No. 21 (7.5 A) fuse in the under-dash fuse/relay box.

1. Push and hold the SEL RESET button.
2. Turn the headlights ON.
3. Turn the ignition switch ON (II).
4. Within 5 sec, turn the headlights OFF, then ON and OFF again.
5. Within 5 sec, release the SELECT button, and then push and release the button three times repeatedly.

- NOTE:**
- While in the self-diagnostic mode, the dash lights brightness controller operates normally.
 - While in the self-diagnostic mode, the SELECT button is used to start the Beeper Drive Circuit Test and the Gauge Drive Circuit Check.
 - If the vehicle speed exceeds 1.2 mph (2 km/h) or the ignition switch is turned to LOCK (0), the self-diagnostic mode ends.

Fig. 3: Blinking Pattern - Ignition Switch (Self-Diagnostic Mode)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

THE INDICATOR DRIVE CIRCUIT CHECK

When entering the self-diagnostic mode, these indicators blink:

ABS indicator, active damper system indicator, A/T gear position indicator, brake system indicator, charging system indicator, cruise control indicator, cruise main indicator, DRL indicator, fog light indicator, high beam indicator, immobilizer indicator, lights-on indicator, low fuel indicator, malfunction indicator lamp (MIL), message indicator, oil pressure indicator, seat belt indicator, security indicator, SH-AWD indicator, Side airbag indicator, tire pressure indicator, VSA activation indicator, and VSA indicator.

SWITCH INPUT CHECK

After the intermittent beeper sounds at the initial stage of self-diagnosis, a beeper sounds continuously while any of the following switch inputs are switched from OFF to ON:

Parking brake switch, VSA OFF switch, comfort switch, cruise control master, SET, RESUME, CANCEL switches, select, previous, next switches, and dash lights brightness controller (VOL (+), VOL (-)).

THE BEEPER DRIVE CIRCUIT CHECK

When entering the self-diagnostic mode, the beeper sounds five times.

THE LCD [SPORT SHIFT AND MULTI-INFORMATION DISPLAY (MID)] SEGMENT CHECK

When entering the self-diagnostic mode, the word "Checking Now" shows on the MID.

THE GAUGE DRIVE CIRCUIT CHECK

When entering the self-diagnostic mode, the speedometer, the tachometer, the fuel gauge, and the coolant temperature gauge needles sweep from the minimum position to maximum position, then return to the minimum position.

NOTE: After the beeper stops sounding and the gauge needles return to the minimum position, pushing the select/reset button starts the Beeper Drive Circuit Check (one beep) and the Gauge Drive Circuit Check again.

The check cannot be started again until the gauge needles return to the minimum position.

Fig. 4: Blinking Pattern - (Entering Self-Diagnostic Mode Indicators)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

If any needle fails to sweep or the beeper does not sound, replace the gauge control module.

THE COMMUNICATION LINE CHECK

While in the self-diagnostic mode, the Communication Line Check starts after the LCD Segment Check.

Fig. 5: Diagnosis Screen Display - CHECKING NOW
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Indication pattern

There is a malfunction in the communication line between the F-CAN and gauge control module. The B-CAN is OK at this time. Check for DTCs in the PCM and troubleshoot any DTCs found. If no DTCs are found, go to B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

Fig. 6: Diagnosis Screen Display - COMMUNICATION CHECK

Courtesy of AMERICAN HONDA MOTOR CO., INC.

There is a malfunction in the communication line between the B-CAN and gauge control module. The F-CAN line is OK at this time. Go to B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

Fig. 7: Diagnosis Screen Display - Communication Check

Courtesy of AMERICAN HONDA MOTOR CO., INC.

There is a malfunction in the communication line between the gauge control module and F-CAN and B-CAN. Check for DTCs in the PCM and troubleshoot any DTCs found. If no DTCs are found, go to B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

Fig. 8: Diagnosis Screen Display - COMMUNICATION CHECK

Courtesy of AMERICAN HONDA MOTOR CO., INC.

ENDING THE SELF-DIAGNOSTIC FUNCTION

Turn the ignition switch to LOCK (0).

NOTE: If the vehicle speed exceeds 1.2 mph (2 km/h), the self-diagnostic function ends.

DTC TROUBLESHOOTING

DTC B1152: GAUGE CONTROL MODULE INTERNAL (EEPROM) ERROR

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.

4. Check for DTCs with the HDS.

Is DTC B1152 indicated?

YES - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

NO - Intermittent failure, the system is OK at this time.

DTC B1155: GAUGE CONTROL MODULE LOST COMMUNICATION WITH COMBINATION SWITCH CONTROL UNIT (HLSW MESSAGE); DTC B1156: GAUGE CONTROL MODULE LOST COMMUNICATION WITH COMBINATION SWITCH CONTROL UNIT (WIPSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1155 and/or B1156 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the gauge control module and the combination switch control unit.

5. Check for DTCs with the HDS.

Are DTCs B1007, B1062, B1063, B1957, B1958, and/or B2969 also indicated?

YES - Do the combination switch control unit input test (see **WIPER/WASHER SWITCH (COMBINATION SWITCH CONTROL UNIT) INPUT TEST**).

NO - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

DTC B1157: GAUGE CONTROL MODULE LOST COMMUNICATION WITH MICU (MICU MESSAGE); DTC B1159: GAUGE CONTROL MODULE LOST COMMUNICATION WITH MICU (DOORSW MESSAGE); DTC B1180: GAUGE CONTROL MODULE LOST COMMUNICATION WITH MICU (AUTOLT MESSAGE); DTC B1188: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE MICU (RM MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN**).

SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1157, B1159, B1180, and/or B1188 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the gauge control module and the MICU.

5. Check for DTCs with the HDS.

Are DTCs B1055, B1056, B1057, B1255, B1955, B2155, B2156, and/or B2161 also indicated?

YES - Do the MICU input test (see **MICU INPUT TEST**).

NO - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

DTC B1158: GAUGE CONTROL MODULE LOST COMMUNICATION WITH RELAY CONTROL MODULE (RM MESSAGE)

NOTE: **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).**

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1158 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the gauge control module and the relay control module.

5. Check for DTCs with the HDS.

Are DTCs B1005, B1959, B2162, and/or B2970 also indicated?

YES - Do the relay control module input test (see **RELAY CONTROL MODULE INPUT TEST**).

NO - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

DTC B1162: GAUGE CONTROL MODULE LOST COMMUNICATION WITH POWER TAILGATE (PTG MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1162 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the power tailgate control unit and the gauge control module.

5. Check for DTCs with the HDS.

Are DTCs B1155, B1156, B1157, B1158, B1180, and/or B1182 also indicated?

YES - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Do the power tailgate control unit input test (see **CONTROL UNIT INPUT TEST/REPLACEMENT**).

DTC B1168: GAUGE CONTROL MODULE LOST COMMUNICATION WITH PCM (ENG MESSAGE); DTC B1169: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE PCM (A/T MESSAGE); DTC B1178: F-CAN COMMUNICATION LINE ERROR

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1168, B1169, and/or B1178 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connection between the gauge control module and the PCM.

5. Check for Fuel and Emissions Systems DTCs with the HDS.

Are there any DTCs indicated?

YES - Go to the indicated DTCs, then recheck.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect gauge control module connector A (12P).
8. Jump the SCS line with the HDS.
9. Disconnect PCM connector A (49P).
10. Connect the gauge control module connector A (12P) connector No. 6 and No. 12 terminals and body ground with jumper wires.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Fig. 13: Identifying Gauge Control Module Connector Terminals 6 And 12 And Body Ground With Jumper Wires

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between body ground and PCM connector A (49P) No. 48 and No. 49 terminals individually.

Terminal side of male terminals

Fig. 14: Identifying Continuity Between Body Ground And PCM Connector Terminals 48 And 49
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), and recheck. If the indication goes away, replace the original PCM (see **PCM REPLACEMENT**). If the DTC is still present, replace the gauge control module (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Repair open in the wire.

DTC B1170: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE VSA MODULATOR-CONTROL UNIT (VSA MESSAGE)

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1170 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connection between the gauge control module and the VSA modulator-control unit.

5. Check for VSA System DTCs with the HDS (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).

Are there any DTCs indicated?

YES - Go to the indicated DTCs, then recheck.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect gauge control module connector A (12P).
8. Disconnect the VSA modulator-control unit 46P connector.
9. Connect gauge control module connector A (12P) connector No. 6 and No. 12 terminals and body ground with jumper wires.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Fig. 15: Identifying Gauge Control Module Connector Terminals 6 And 12 And Body Ground With Jumper Wires

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check for continuity between body ground and VSA modulator-control unit 46P connector No. 38 and No. 39 terminals individually.

VSA MODULATOR-CONTROL UNIT 46P CONNECTOR

Fig. 16: Identifying Continuity Between Body Ground And VSA Modulator-Control Unit Connector Terminals 38 And 39

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**), and recheck. If the indication goes away, replace the original VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**). If the DTC is still present, replace the gauge control module (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Repair open in the wire.

DTC B1173: GAUGE CONTROL MODULE LOST COMMUNICATION WITH THE TPMS CONTROL UNIT (TPMS MESSAGE)

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1173 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the gauge control module and the TPMS control unit.

5. Check for TPMS DTCs with the HDS (see GENERAL TROUBLESHOOTING INFORMATION).

Are there any DTCs indicated?

YES - Go to the indicated DTCs, then recheck.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect gauge control module connector A (12P).
8. Disconnect the TPMS control unit 20P connector.
9. Connect gauge control module connector A (12P) connector No. 6 and No. 12 terminals and body ground with jumper wires.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Fig. 17: Identifying Gauge Control Module Connector Terminals 6 And 12 Body Ground With Jumper Wires

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check for continuity between body ground and the TPMS control unit 20P connector No. 1 and No. 11 terminals individually.

Fig. 18: Identifying Continuity Between Body Ground And TPMS Control Unit 20P Connector Terminals 1 And 11

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good TPMS control unit (see TPMS CONTROL UNIT REPLACEMENT), and recheck. If the indication goes away, replace the original TPMS control unit (see TPMS CONTROL UNIT REPLACEMENT). If the DTC is still present, replace the gauge control module (see GAUGE CONTROL MODULE INPUT TEST).

NO - Repair open in the wire.

DTC B1175: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT OPEN

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 30 seconds or more.
4. Check for DTCs with the HDS.

Is DTCs B1175 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the gauge control module and the fuel tank unit.

5. Turn the ignition switch to LOCK (0).

6. Disconnect the fuel tank unit 4P connector.
7. Disconnect gauge control module connectors A (12P) and B(24P).
8. Connect the fuel tank unit 4P connector No. 1 and No. 3 terminals and body ground with jumper wires.

Wire side of female terminals

Fig. 19: Identifying Fuel Tank Unit Connector Terminals 1 And 3 And Body Ground With Jumper Wires

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check for continuity between the gauge control module connector A (12P) No. 11 terminal and body ground, and connector B (24P) No. 15 terminal and body ground respectively.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 20: Identifying Continuity Between Gauge Control Module Connector Terminal 11 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GAUGE CONTROL MODULE CONNECTOR B (24P)

Wire side of female terminals

Fig. 21: Identifying Continuity Between Gauge Control Module Connector Terminal 15 And Body Ground**Courtesy of AMERICAN HONDA MOTOR CO., INC.**

Is there continuity?

YES - Go to step 10.

NO - Repair open in the wire between the gauge control module and the fuel tank unit.

10. Do the fuel gauge sending unit test (see **FUEL GAUGE SENDING UNIT TEST**).

Is the fuel tank unit OK?

YES - Replace the gauge control module.

NO - Replace the fuel gauge sending unit.

DTC B1176: FUEL LEVEL SENSOR (FUEL GAUGE SENDING UNIT) CIRCUIT SHORT

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 30 seconds or more.
4. Check for DTCs with the HDS.

Is DTCs B1176 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the gauge control module and the fuel tank unit.

5. Turn the ignition switch to LOCK (0).
6. Disconnect the fuel tank unit 4P connector.
7. Clear the DTCs with the HDS.
8. Turn the ignition switch to LOCK (0), and then back ON (II).
9. Wait for 30 seconds or more.
10. Check for DTCs with the HDS.

Is DTCs B1176 indicated?

YES - Go to step 11.

NO - Replace the fuel gauge sending unit.

11. Disconnect gauge control module connector A (12P).
12. Check for continuity between the gauge control module connector A (12P) No. 11 terminal and body ground.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 22: Identifying Continuity Between Gauge Control Module Connector Terminal 11 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire between the gauge control module and the fuel tank unit.

NO - Replace the gauge control module.

DTC B1177: BATTERY VOLTAGE ABNORMAL

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Check for DTCs with the HDS.

Is DTCs B1177 indicated?

YES - Go to step 8.

NO - Go to step 4.

4. Clear the DTCs with the HDS.
5. Turn the ignition switch to LOCK (0), and then back ON (II).
6. Crank the engine.
7. Check for DTCs with the HDS.

Is DTCs B1177 indicated?

YES - Go to step 8.

NO - Intermittent failure, the gauge control module and power supply voltage (IG1) that is supplied to the gauge control module are OK at this time. The battery may have been discharged, and recovered.

8. Check the battery (see **BATTERY TEST**) and the charging system.

Are the battery condition normal and the charging system OK?

YES - Go to step 9.

NO - The battery needs a recharge or replacement, or the charging system needs to repair.

9. Turn the ignition switch ON (II).
10. With gauge control module connector A (12P) still connected, measure the voltage between the gauge control module connector A (12P) No. 7 terminal and body ground.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 23: Identifying Voltage Between Gauge Control Module Connector Terminal 7 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the voltage above 7.5 V?

YES - Replace the gauge control module.

NO - Repair open or high resistance in the IG1 line between the ignition switch and the gauge control module.

DTC B1182: GAUGE CONTROL MODULE LOST COMMUNICATION WITH DRIVER'S MPCS UNIT (DRLOCKSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Gauges - MDX

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1182 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the gauge control module and the driver's MPCS unit.

5. Check for DTCs with the HDS.

Are DTCs B1013, B1015, B1065, and B1905 indicated with DTC B1182?

YES - Do the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

NO - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

DTC B1187: GAUGE CONTROL MODULE LOST COMMUNICATION WITH SRS UNIT (SRS MESSAGE)

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1187 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the gauge control module and the SRS unit.

5. Check for SRS DTCs with the HDS.

Are there any DTCs indicated?

YES - Go to the indicated DTCs, then recheck.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect gauge control module connector A (12P).

8. Disconnect SRS unit connector A (see [SRS UNIT REPLACEMENT](#)).
9. Check for continuity between the gauge control module connector A (12P) No. 6 and the SRS unit connector A (28P) No. 12 terminal, and between the gauge control module connector A (12P) No. 12 terminal and the SRS unit connector A (28P) No. 11 terminal.

Fig. 24: Identifying Continuity Between Gauge Control Module And SRS Unit Connector Terminals 6 And 12 & Terminals 12 And 11

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good SRS unit (see [SRS UNIT REPLACEMENT](#)), and recheck. If the indication goes away, replace the original SRS unit (see [SRS UNIT REPLACEMENT](#)). If the DTC is still present, replace the gauge control module (see [GAUGE CONTROL MODULE INPUT TEST](#)).

NO - Repair open in the wire.

DTC B1189: GAUGE CONTROL MODULE LOST COMMUNICATION WITH ACTIVE DAMPER SYSTEM CONTROL UNIT (ADS MESSAGE)

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1188 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the

gauge control module and the active damper control unit.

5. Check for active damper system DTCs with the HDS.

Are there any DTCs indicated?

YES - Go to the indicated DTCs, then recheck.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect gauge control module connector A (12P) (see **GAUGE CONTROL MODULE REPLACEMENT**).
8. Disconnect active damper control unit connector B (14P) (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**).
9. Connect gauge control module connector A (12P) connector No. 6 and No. 12 terminals to body ground with jumper wires.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 25: Identifying Gauge Control Module Connector Terminals 6 And 12 Body Ground With Jumper Wires

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check for continuity between body ground and active damper control unit connector B (14P) No. 1 and No. 8 terminals respectively.

ACTIVE DAMPER CONTROL UNIT CONNECTOR B (14P)

Wire side of female terminals

Fig. 26: Identifying Continuity Between Body Ground And Active Damper Control Unit Connector Terminals 1 And 8

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good active damper control unit (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**), and recheck. If the indication goes away, replace the original active damper control unit (see **ACTIVE DAMPER CONTROL UNIT REPLACEMENT**). If the DTC is still present, replace the gauge control module (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Repair an open in the wire.

GAUGE CONTROL MODULE INPUT TEST

NOTE: Before testing the gauge control module, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Turn the ignition switch to LOCK (0), and remove the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).
2. Disconnect gauge control module connectors A (12P) and B (24P).

NOTE: All connector views are wire side of female terminals.

GAUGE CONTROL MODULE CONNECTOR A (12P)

GAUGE CONTROL MODULE CONNECTOR B (24P)

Fig. 27: Identifying Gauge Control Module Connectors Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 4.
4. With the connectors still disconnected, make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 5.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Gauges - MDX

GAUGE CONTROL MODULE INPUT

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A5	BLK	Under-dash fuse/relay box connector N (45P) disconnected	Check for continuity between the A5 and the under-dash fuse/relay box connector N (45P) No. 22 terminal: There should be continuity.	An open in the wire
A6	RED	PCM connector A (49P) disconnect	Check for continuity between the A6 and the PCM connector A (49P) No. 1 terminal: There should be continuity.	An open in the wire
A12	WHT	PCM connector A (49P) disconnected	Check for continuity between the A12 and the PCM connector A (49P) No. 36 terminal: There should be continuity.	An open in the wire

5. Reconnect the connectors, turn the ignition switch ON (II), and make these input tests at the connectors.

- If any test indicates a problem, find and correct the cause, then recheck the system.
- If all the input tests prove OK, replace the gauge control module.

GAUGE CONTROL MODULE INPUT

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A2	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground(G501) • An open in the wire
B13				
A1	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 7 (10 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • An open in the wire
A7	YEL	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. 21 (7.5 A) fuse in the main under-dash fuse/relay box • Faulty under-dash fuse/relay box

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Gauges - MDX

				• An open in the wire
B9	ORN	Ignition switch ON (II), brake fluid is full level in the reservoir	Measure the voltage to ground: There should be 5 V or more.	• Faulty brake fluid level switch • A short to ground in the wire
		Ignition switch ON (II), brake fluid is lower level in the reservoir	Measure the voltage to ground: There should be less than 1 V.	• Poor ground(G302) • An open in the wire • Faulty brake fluid level switch
B10	ORN	Ignition switch ON (II), parking brake pedal pressed	Measure the voltage to ground: There should be less than 1 V.	• Faulty brake fluid level switch • An open in the wire
		Ignition switch ON (II), parking brake pedal released	Measure the voltage to ground: There should be 5 V or more.	• Faulty brake fluid level switch • A short to ground in the wire
B24	BLU	Ignition switch ON (II), washer fluid is half or more in the washer reservoir	Measure the voltage to ground: There should be less than 1 V.	• Poor ground(G201) • Faulty washer fluid level switch • An open in the wire
		Ignition switch ON (II), washer fluid is half or more in the washer reservoir	Measure the voltage to ground: There should be 5 V or more.	• Faulty washer fluid level switch • A short to ground in the wire

REWRITING THE ODO DATA AND TRANSFERRING THE MAINTENANCE MINDER DATA TO A NEW GAUGE CONTROL MODULE**NOTE:**

- Obtain a new gauge control module before starting the rewriting process.
- Rewriting is not possible on a gauge control module that will not communicate with the HDS.
- Make sure that the HDS shows the correct VIN for the car you are working on.
- Once you have started this procedure, you must complete it before removing the HDS from the DLC.
- Connect a battery jumper box (not a battery charger) to insure that correct battery voltage will be maintained.

1. Before replacing the gauge control module, connect the HDS.
2. Select GAUGES from the BODY ELECTRICAL system select menu with the HDS.
3. Select "Gauge Control Module Replacement (ODO Rewrite)" from the ADJUSTMENT menu, and follow the instructions on the display to retrieve the ODO value and the Maintenance Minder Data Information.
4. Replace the gauge control module.
5. Follow the instructions on the display to write the new ODO value and Maintenance Minder Data to the new gauge control module. If the data transfer fails, refer to the instructions below to release the locked ODO value.

RELEASE LOCKED ODOMETER MILEAGE TO THE ORIGINAL GAUGE CONTROL MODULE.

If after you attempt to transfer mileage, the new odometer has dashes (--), garbled, or an incorrect value displayed, do the following:

Start over. The original gauge control module is going to be unlocked and restored to its original state.

1. Confirm that you have the latest HDS version of software.
2. Make sure that the HDS shows the correct VIN for the car you are working on.
3. With the ignition switch in LOCK (0) position, reconnect the original gauge control module.
4. Completely re-boot the HDS.
5. Clear any stored DTCs.
6. Navigate to Body Electric/Gauges/Adjustment/ Instrument Panel Replacement.
7. Select "3. Releasing Locked ODO Value."
8. Follow the prompts and the Odometer mileage will be restored.
9. Start over and make sure the screen prompts are followed.

GAUGE CONTROL MODULE REPLACEMENT

NOTE: Before replacing the gauge control module, do the **"REWRITING THE ODO DATA AND TRANSFERRING THE MAINTENANCE MINDER DATA TO A NEW GAUGE CONTROL MODULE"** (see).

1. Remove the parts shown:
 - Driver's switch panel (see **DRIVER'S OUTER DASHBOARD TRIM REMOVAL/INSTALLATION**).
 - Instrument fascia (see **INSTRUMENT FASCIA REMOVAL/ INSTALLATION**).
2. Remove the screws from the gauge control module (A).

Fig. 28: Identifying Gauge Control Module And Screws
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (B), and remove the gauge control module.
4. Install the gauge control module in the reverse order of removal.

MULTI-INFORMATION SWITCH TEST/ REPLACEMENT

1. Remove the driver's airbag assembly (see **DRIVER'S AIRBAG REPLACEMENT**).
2. Disconnect the 20P connector (A) from the cable reel.

Fig. 29: Identifying 20P Connector From Cable Reel
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Gauges - MDX

3. Measure the resistance between the cable reel 20P connector No. 14 and No. 15 terminals in each multi-information switch position according to the table.

RESISTANCE SPECIFICATION

Position	Resistance
Previous (? triangle)	About 33 ohms
SEL/RESET	About 1,023 ohms
Next (? triangle)	About 363 ohms

4. If the resistance is not as specified, replace the steering switch assembly.

NOTE: If the switch is OK, but there is a problem with the switch function, check the cable reel.

OUTSIDE AIR TEMPERATURE INDICATOR CALIBRATION

NOTE: To test the outside air temperature sensor (see OUTSIDE AIR TEMPERATURE SENSOR TEST).

DESCRIPTION

The outside temperature sensor is located behind the center of the front bumper. The gauge control module uses measurements from this sensor to display the outside air temperature.

Because of the location of the sensor, it may be affected by heat reflection from the road, engine and radiator heat, or hot exhaust from surrounding traffic.

These conditions can heat soak the outside air temperature sensor and cause inaccurate readings. Logic has been written into the gauge control module to help prevent abnormal or fluctuating outside air temperature indicator readings.

OUTSIDE AIR TEMPERATURE INDICATOR LOGIC

Initial outside air temperature indication after the ignition switch is turned ON (II).

If the engine coolant temperature is 140°F (60°C) or higher when the ignition switch is turned ON (II), the outside air temperature indicated the last time the key was turned to LOCK (0) will be displayed regardless of the current temperature measured by the outside air temperature sensor.

If the engine coolant temperature is 139°F (59°C) or lower when the ignition switch is turned ON (II), the current temperature measured by the outside air temperature sensor will be indicated.

UPDATE TO THE OUTSIDE AIR TEMPERATURE INDICATOR WHILE DRIVING

If the temperature measured by the outside air temperature sensor is greater than the temperature on the outside

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Gauges - MDX

air temperature indicator, the outside temperature indicator will increase by 1°F (1°C) per minute after the vehicle speed is greater than 19 mph (30 km/h) for more than 30 seconds. It will continue to increase until the current outside air temperature is indicated. So, the first change to the outside air temperature indicator is 1 minute and 30 seconds after the vehicle speed is greater than 19 mph (30 km/h). If the vehicle speed drops below 19 mph (30 km/h), the indicator will not update again until the vehicle speed is increased to 19 mph (30 km/h) or more for more than 1 minute and 30 seconds again.

If the outside air temperature is less than 140°F (60°C), the temperature increases 1°F (1°C) every 2 seconds until the current outside air temperature.

If the outside air temperature is less than the indicated temperature, the temperature will decrease 1°F (1°C) every 2 seconds until the current outside air temperature is indicated regardless of vehicle speed.

TROUBLESHOOTING

If the indicator displays "---" for more than 2 seconds after selecting the outside air temperature display mode, check the climate control system or multiplex integrated control system for DTCs (see **B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

CALIBRATION

The outside air temperature indicator's displayed temperature can be recalibrated $\pm 5^{\circ}\text{F}$ or $\pm 3^{\circ}\text{C}$ to meet the client's expectations.

Calibrate the outside air temperature with the HDS or by custom memory setting.

GENERAL TROUBLESHOOTING INFORMATION

INTERMITTENT FAILURES

The term "intermittent failure" means a system may have had a failure, but it checks OK now. If the malfunction indicator lamp (MIL) on the dash does not come on, check for poor connections or loose pins at all connectors related to the circuit that you are troubleshooting. If the MIL was on but then went out, the original problem may have been intermittent.

SERVICE INFORMATION

Some DTCs or symptoms can be caused by a combination of PCM software and specific driving habits. Periodically, new PCM software or new service procedures may become available. Always check on-line for the latest software or service information related to the DTCs or symptoms you are troubleshooting.

OPENS AND SHORTS

"Open" and "short" are common electrical terms. An open is a break in a wire or at a connection. A short is an accidental connection of a wire to ground or to another wire. In simple electronics, this usually means something won't work at all. With complex electronics (such as PCMs) this can sometimes mean something works, but not the way it's supposed to.

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

If the MIL (malfunction indicator lamp) has come on

1. Start the engine, and check the MIL (A).

NOTE: If the ignition switch is turned ON (II), and the engine is not started, the MIL stays on for 15-20 seconds (see HOW TO SET READINESS CODES).

Fig. 2: Identifying Malfunction Indicator Lamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the MIL stays on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 3: Connecting HDS To DLC

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch ON (II).
4. Make sure the HDS communicates with the PCM and other vehicle systems. If it doesn't, go to DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Check the diagnostic trouble code (DTC) and note it. Also check the freeze data and/or on-board snapshot data, and download any data found. Then refer to the indicated DTCs troubleshooting, and begin the appropriate troubleshooting procedure.

NOTE:

- Freeze data indicates the engine conditions when the first system malfunction, misfire, or fuel trim malfunction that activated the MIL was detected.
- The HDS can read the DTCs, freeze data, on-board snapshot, current data, and other powertrain control module (PCM) data.
- For specific operations, refer to the user's manual that came with the HDS.

6. If no DTCs are found, go to MIL circuit troubleshooting (see **MIL CIRCUIT TROUBLESHOOTING**).

If the MIL did not stay on

If the MIL did not stay on but there is a driveability problem, do the symptom troubleshooting.

If you can't duplicate the DTC

Some of the troubleshooting requires you to reset the PCM and try to duplicate the DTC. If the problem is intermittent and you can't duplicate the code, do not continue through the procedure. To do so will only result in confusion and possibly, a needlessly replaced PCM.

HDS CLEAR COMMAND

The PCM stores various specific data to correct the system even if there is no electrical power such as when the battery negative terminal is disconnected. Stored data based on failed parts should be cleared by using the "CLEAR COMMAND" of the HDS, if parts are replaced.

The HDS has three kinds of clear commands to meet this purpose. They are DTC clear, PCM reset, and crank (CKP) pattern clear. DTC clear command erases all stored DTC codes, freeze data, on-board snapshot, and readiness codes. This must be done with the HDS after reproducing the DTC during troubleshooting.

The PCM reset command erases all stored DTC codes, freeze data, on-board snapshot, readiness codes, and all specific data to correct the system except crank (CKP) pattern. If the crank (CKP) pattern data in the PCM was cleared, you must do the crank (CKP) pattern learn procedure. The crank (CKP) pattern clear command erases only crank (CKP) pattern data. This command is for repair of a misfire or the CKP sensor.

SCAN TOOL CLEAR COMMAND

If you are using a generic scan tool to clear commands, be aware that there is only one setting for clearing the PCM, and it clears all commands at the same time (crank (CKP) pattern learn, idle learn, readiness codes, freeze data, on-board snapshot, and DTCs). After you clear all commands, you then need to do these procedures, in this order: PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**); crank (CKP) pattern learn procedure; Test-drive to set readiness codes to complete (see **HOW TO SET READINESS CODES**).

DTC CLEAR

1. Clear the DTC with the HDS while the engine is stopped.
2. Turn the ignition switch OFF.
3. Turn the ignition switch ON (II), and wait 30 seconds.
4. Turn the ignition switch OFF, and disconnect the HDS from the DLC.

PCM RESET

1. Reset the PCM with the HDS while the engine is stopped.
2. Turn the ignition switch OFF.
3. Turn the ignition switch ON (II), and wait 30 seconds.
4. Turn the ignition switch OFF, and disconnect the HDS from the DLC.
5. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).

CRANK (CKP) PATTERN CLEAR/CRANK (CKP) PATTERN LEARN

Clear/Learn Procedure (with the HDS)

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 4: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Select CRANK PATTERN in the ADJUSTMENT MENU with the HDS.
5. Select CRANK PATTERN LEARNING with the HDS, and follow the screen prompts.

Learn Procedure (without the HDS)

1. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on.
2. Test-drive the vehicle on a level road: Decelerate (with the throttle fully closed) from an engine speed of 2,500 rpm down to 1,000 rpm with the transmission in D position.
3. Test-drive the vehicle on a level road: Decelerate (with the throttle fully closed) from an engine speed of 5,000 rpm down to 3,000 rpm with the transmission in D position.
4. Repeat step 2 and 3 several times.
5. Turn the ignition switch OFF.
6. Turn the ignition switch ON (II), and wait 30 seconds.

How to End a Troubleshooting Session (required after any troubleshooting)

1. Reset the PCM with the HDS.
2. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
3. Turn the ignition switch OFF.
4. Disconnect the HDS from the DLC.

NOTE: **The PCM is part of the immobilizer system. If you replace the PCM, it will have a different immobilizer code. In order for the engine to start, you**

must rewrite the immobilizer code with the HDS (IMMOBILIZER SYSTEM--MDX article).

HOW TO TROUBLESHOOT CIRCUITS AT THE PCM CONNECTORS

NOTE:

- The PCM overwrites data and monitors the EVAP system for up to about 40 minutes after the ignition switch is turned OFF. Jumping the SCS line after turning the ignition switch OFF cancels this function. Disconnecting the PCM during this function, without jumping the SCS line first, can damage the PCM.
- PCM connectors A, B, and C have symbols (A= $\square$ B= Δ , C= $\circ$) embossed on them for identification.

1. Jump the SCS line with the HDS.
2. Remove the bracket (D), then free the A/C discharge line (E) from the clip (F) and remove the A/C suction line mounting bracket bolt (G).

Fig. 5: Identifying A/C Discharge Line, Bracket And A/C Suction Line Mounting Bracket Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the cover (H), then disconnect the PCM connector A, B, and C.
4. When diagnosis/troubleshooting is made at the PCM connector, use the measurement hole (A) above the terminal you need to check.

Fig. 6: Identifying Measurement Hole

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect one side of the patch cord (A) terminals to a commercially available digital multimeter (B), and connect the other side of the patch cord terminals to a commercially available banana jack (Pomona Electronics Tool No. 3563 or equivalent) (C).

Fig. 7: Connecting Side Of Patch Cord Terminals To Digital Multimeter

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Gently contact the pin probe (male) at the terminal test port from the terminal side. Do not force the tips into the terminals.

NOTE:

- For accurate results, always use the pin probe (male).
- To prevent damage to the connector terminals, do not insert test equipment probes, paper clips, or other substitutes as they can damage the terminals. Damaged terminals cause a poor connection and an incorrect measurement.
- Do not puncture the insulation on a wire. Punctures can cause poor or intermittent electrical connections.

SUBSTITUTING THE PCM

Special Tools Required

- Honda diagnostic system (HDS) tablet tester

- Honda interface module (HIM) and an iN workstation with HDS and CM update software
- HDS pocket tester
- GNA600 and an iN workstation with HDS and CM update software

NOTE: **Use this procedure when you need to substitute a known-good PCM during troubleshooting procedures.**

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 8: Connecting HDS To DLC

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the PCM and other vehicle systems. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**). If you are returning from DLC circuit troubleshooting, skip step 4 to 5, then clean the throttle body after substituting the PCM (see **THROTTLE BODY CLEANING**).
4. USA, Canada models: Select the INSPECTION MENU with the HDS.
5. USA, Canada models: Select the ETCS TEST, then select the TP POSITION CHECK, and follow the screen prompts.

NOTE: **USA, Canada models: If the TP POSITION CHECK indicates FAILED, continue this procedure.**

6. Turn the ignition switch OFF.
7. Jump the SCS line with the HDS.
8. Remove the bracket (D), then free the A/C discharge line (E) from the clip (F) and remove the A/C suction line mounting bracket bolt (G).

Fig. 9: Identifying A/C Discharge Line, Clip, Bracket And A/C Suction Line Mounting Bracket Bolt With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the cover (H), then disconnect the PCM connectors A, B, and C.

NOTE: PCM connectors A, B, and C have symbols (A=□, B=Δ, C=○) embossed on them for identification.

10. Remove the bolts (I), then remove the PCM (J).
11. Install the parts in the reverse order of removal.
12. Open the SCS with the HDS.
13. Turn the ignition switch ON (II).

NOTE: USA, Canada models: DTC P0630 "VIN Not Programmed or Mismatch" may be stored because the VIN has not been programmed into the PCM; ignore it, and continue this procedure.

14. USA, Canada models: Manually input the VIN to the PCM with the HDS.
15. Update the PCM if it does not have the latest software.
16. Select the IMMOBI SYSTEM with the HDS.
17. Enter the immobilizer code with the PCM replacement procedure in the HDS; it allows you to start the engine.
18. Reset the PCM with the HDS.
19. USA, Canada models: If the TP POSITION CHECK failed in step 6, clean the throttle body (see

THROTTLE BODY CLEANING).

20. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
21. Do the CKP pattern learn procedure.

OBD STATUS

The OBD status shows the current system status of each DTC and all of the parameters. This function is used to see if the repair was successfully completed. The results of diagnostic tests for the DTC are displayed as:

- **PASSED:** The on board diagnosis is successfully finished.
- **FAILED:** The on board diagnosis has finished but failed.
- **EXECUTING:** The vehicle is in enable criteria conditions for the DTC and the on board diagnosis is running.
- **NOT COMPLETED:** The on board diagnosis was running but is out of the enable conditions for the DTC.
- **OUT OF CONDITION:** The vehicle has stayed out of the enable conditions for the DTC.

2007-09 ACCESSORIES AND EQUIPMENT

HandsFreeLink System - MDX

COMPONENT LOCATION INDEX

Fig. 1: HandsFreeLink System Component Location Index
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GENERAL TROUBLESHOOTING INFORMATION

HOW TO CHECK FOR DTCS WITH THE HDS

1. Make sure the ignition switch is in LOCK (0).
2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 2: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch to ON (II).
4. Make sure the HDS communicates with the vehicle and the HandsFreeLink control unit. If it doesn't, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Select HandsFreeLink in the BODY ELECTRICAL menu.
6. Select DTCs in the HandsFreeLink menu.
7. Check for DTCs. If any DTCs are indicated, write down the DTCs, then go to the indicated **DTC troubleshooting**. If no DTCs are indicated, refer to **SYMPTOM TROUBLESHOOTING**.

NOTE:

- After troubleshooting, clear the DTCs with the HDS.
- For specific operations, refer to the user's manual that came with the HDS.

The HFL system works only with approved Bluetooth®-enabled cell phones with a hands-free profile. If you are not sure if your cell phone is compatible with the HFL system, Acura has a dedicated call center at (888) 528-7876 and web site www.acura.com/handsfreelink, to answer your questions.

The HFL system allows you to make and receive hands-free calls. It cannot control the phone's performance (call quality and signal strength). For more information about performance and performance problems, refer to Dropped Calls.

CHECKING CELL PHONE COMPATIBILITY

The most important step in troubleshooting HFL issues is to identify the client's phone model, the software version, and the carrier that experiences the HFL problem. Not all phones with the Bluetooth feature and a hands-free profile are compatible with the HFL system.

Here is the best method to confirm if the phone is compatible

1. Log onto www.acura.com/handsfreelink.
2. Select Find a Phone.

Fig. 3: Identifying Cell Phone Compatibility

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Choose the vehicle model you are working on, then select CONTINUE.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT HandsFreeLink System - MDX

The screenshot shows the Acura HandsFreeLink website. At the top is the Acura logo and the text "HANDSFREELINK™". Below this is a navigation bar with links: Home, Home Phone, Pair Phone, Find Data Package, Demo, FAQ, and Customer Service. The main content area is titled "FIND A PHONE" and includes the instruction: "To find a phone that is compatible with HandsFreeLink™, please follow the steps below:". The first step is highlighted with a red oval and labeled "STEP 1". It says "CHOOSE YOUR VEHICLE MODEL" and has a dropdown menu showing "MDX" and a "CONTINUE >" button. To the right of this step is a "MESSAGE BOARD" section with a note: "NOTES: PLEASE LOOK HERE FOR IMPORTANT MESSAGES". Below the note is a paragraph: "Phonebook Import and Receive Contact feature for 2007 MDX and 2007 TL. Certain phones approved for this feature may have multiple software versions. Please make note of the approved software version listed on this site, as some versions may no longer be available from the phone carrier or manufacturer."

Fig. 4: Identifying Cell Phone Compatibility

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Choose the vehicle model year, then select CONTINUE

The screenshot shows the Acura HandsFreeLink website, continuing from the previous step. The navigation bar and "FIND A PHONE" header are the same. The instruction "To find a phone that is compatible with HandsFreeLink™, please follow the steps below:" is still present. The second step is highlighted with a red oval and labeled "STEP 2". It says "CHOOSE YOUR VEHICLE MODEL YEAR" and has a dropdown menu showing "2008" and a "CONTINUE >" button. Below this step, the text "Vehicle Model MDX" is visible, and there is a "Start Over" link.

Fig. 5: Identifying Cell Phone Compatibility

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Choose the vehicle trim level, then select CONTINUE.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT HandsFreeLink System - MDX

The screenshot shows the Acura HandsFreeLink website. At the top is the Acura logo and the text "HANDSFREELINK™". Below this is a navigation bar with links: Home, Home Phone, Pair Phone, Find Data Packages, Demo, FAQ, and Customer Service. The main content area is titled "FIND A PHONE" and includes the instruction: "To find a phone that is compatible with HandsFreeLink™, please follow the steps below:". A box labeled "STEP 3" contains the text "CHOOSE YOUR VEHICLE TRIM LEVEL". Below this is a dropdown menu currently set to "w/Navigation". Underneath the dropdown, it says "Vehicle Model: MDX" and "Vehicle Year: 2008". To the right of this information is a "CONTINUE >" button. At the bottom of the box is a "Start Over" link.

Fig. 6: Identifying Cell Phone Compatibility

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Choose to search by wireless carrier or cell phone manufacturer, then select CONTINUE.

The screenshot shows the Acura HandsFreeLink website, similar to Fig. 6. The main content area is titled "FIND A PHONE" with the same instruction. A box labeled "STEP 4" contains the text "CHOOSE YOUR SEARCH TYPE". Below this are two options, each with a "CONTINUE >" button: "Search by Wireless Carrier" and "Search by Device Manufacturer". An "OR" is placed between these two options. Below the search options, it says "Vehicle Model: MDX", "Vehicle Year: 2008", and "Vehicle Trim Level: w/Navigation". At the bottom is a "Start Over" link. Two arrows point from text labels to the search options: "SEARCH BY CARRIER" points to "Search by Wireless Carrier" and "SEARCH BY MANUFACTURER" points to "Search by Device Manufacturer".

 Function is NOT compatible with HandsFreeLink operation.

• See your Owner's Manual for details on Phone Data Connection.

** Optional features are only available on specific trims and models.

This compatible phone list is updated regularly. The last update occurred on 01/30/2008.

Fig. 9: Identifying HandsFreeLink Supported Features
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- These approved, archived, and currently testing phone model lists are constantly changing, so make sure you view them frequently.
- Phones are added as they are approved.
- Phones can be removed from the approved list if a software bug is discovered that makes the phone incompatible. These phones can be added back to the approved list if the phone manufacturer corrects the bug.
- If the software bug is corrected, a new software version is created and may be listed in the Supported Features section of the phone.
- The Acura web site now includes the software versions that are tested and approved. When software versions are listed, you need to know which version is loaded on the phone to help you troubleshoot the client's complaint. If you cannot access the Acura web site, call the HFL call center at (888) 528-7876 for further assistance. The call center is open Monday thru Friday from 6:00 a.m. to 6:00 p.m. CST; Saturday from 7:00 a.m. to 6:00 p.m. CST; and Sunday from 8:00 a.m. to 6:00 p.m. CST.

VOICE CONTROL TIPS

To give any voice commands to the HFL system, press and release the HFL Talk button. Always wait for the beep, then give your command in a clear, natural voice. The HFL microphone is on the ceiling, by the map lights.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT HandsFreeLink System - MDX

If the HFL system doesn't recognize your voice command, you'll hear "Pardon." If your command isn't recognized a second time, you'll hear "Please repeat." If your command isn't recognized a third time, the HFL system sends you to its Help menu.

To hear a list of available options at any time, press the HFL TALK button and say "Hands free help."

The HFL system may have problems with some voices. To improve voice recognition:

- Close the windows and moonroof.
- Set the fan speed to low (1 or 2).
- Adjust the air flow from the air conditioning vents so that they do not blow against the microphone on the ceiling.
- Speak in a clear and natural voice. If the system cannot recognize your command, try speaking louder, in a deeper tone.
- If the background noise is too loud, you may need to speak louder.
- If you speak with something in your mouth, or your voice is too high, the system may not interpret your command correctly.
- Find out if the problem is with one person or with everyone who uses the system. If the system has a problem with only one person's voice, this is a system limitation.

Many issues result from the client not using the system properly. Make sure the client is using the HFL buttons and not the navigation buttons. When the HFL TALK button is pressed, the client hears one audible tone. When the HFL BACK button is pressed, the client hears two audible tones. Make sure to press the HFL BACK button to exit out of the HFL main menu after completing a call and before giving any navigation commands.

The HFL system may experience a number recognition issue, such as when a client rattles off a set of numbers in a group unrecognized by the system. The HFL system understands phone numbers in specific blocks of 1, 3, 4, 7, and 10 numbers. For example, the system understands:

- 1234567890
- 123-456-7890
- 1-2-3-4-5-6-7-8-9-0

The system may become confused if numbers are stated in other blocks like these:

- 1234-567-890
- 12-34-56-78-90
- 12345-67890
- 123-4567-890

NAVIGATION THROUGH MENUS

To skip a voice prompt, press and release the HFL TALK button while the HFL system is speaking. The system begins listening for your next voice command.

To go back a step in a voice command sequence, press and release the HFL BLACK button, or press the HFL TALK button and say "Go back." If you don't say anything while the HFL system is listening for your voice command, it times out and stops voice recognition. The next time you press and release the HFL TALK button, the HFL system begins listening from the point it timed out.

If you've finished or want to stop a voice command sequence at any time, press and release the HFL BACK button, or press and release the HFL TALK button, wait for the beep, and say "Cancel." The next time you press and release the HFL TALK button, the HFL system begins from its main menu, and MAIN appears on the multi-information display (MID) in the instrument panel. To avoid keeping the audio system muted, press and release the HFL BACK button when you are finished.

PAIRING A CELL PHONE

You must pair an approved Bluetooth-compatible phone to the HFL system before you can make and receive calls. For a current list of approved phones and specific phone pairing instructions for each phone, see Checking Cell Phone Compatibility, go to www.acura.com/handsfreelink, or call (888) 528-7876.

The following procedure works for most phones. If you cannot pair your phone to the HFL system with this procedure, refer to your phone's operating manual, visit www.acura.com/handsfreelink, or call (888) 528-7876.

NOTE:

- **You cannot pair a phone if the vehicle is moving.**
- **Your phone must be in its Discovery mode.**
- **A maximum of six Bluetooth-compatible phones can be paired to the system.**

1. With your phone on and the ignition switch in ACCESSORY (I) or ON (II), press and release the HFL TALK button. After the beep, say "Phone setup." The HFL responds, "Phone setup options are status, pair, edit, delete, and list."
2. Press and release the HFL TALK button. After the beep, say "Pair." The HFL responds, "The pairing process requires operation of your mobile phone. For safety, only perform this function while the vehicle is stopped. State a four-digit code for pairing. Note this code. It will be requested by the phone."
3. Press and release the HFL TALK button. After the beep, say the four-digit code you want to use. For example, say "1, 2, 3, 4." The HFL responds, "1, 2, 3, 4. Is this correct?"
4. Press and release the TALK button. After the beep, say "Yes." The HFL responds, "HFL is now searching for a Bluetooth phone. Make sure the phone you are trying to pair is in Discovery mode." If these steps do not work on the phone you are pairing, refer to the phone's operating manual.
5. Follow the prompts on your phone to get it into its Discovery mode. The phone will search for the HFL. When it comes up, select HandsFreeLink from the list of options displayed on your phone.
6. When asked by the phone, enter the four-digit code from step 3 into your phone. The HFL responds, "A new phone has been found. What would you like to name this phone?"
7. Press and release the HFL TALK button. After the beep, say the name you want to use. For example, say "Tom's phone." The HFL responds, "Tom's phone has been successfully paired. Returning to the main menu."

PAIRING TROUBLESHOOTING

Many pairing issues are resolved by altering the client's phone settings

Bluetooth feature settings must be turned on. Phone manufacturers set the default to disable Bluetooth features to conserve battery life. Cell phones may provide procedures to "Temporary Power On Bluetooth", or "Power On Bluetooth." Turn the Bluetooth feature on, pair the phone to the vehicle, and confirm the phone is linked. Do this by turning the phone off and back on. Make or receive a call to confirm the cell phone is successfully paired.

When the phone's Bluetooth feature is on, other handsfree accessories such as earpieces or headsets may automatically reconnect to the phone when you turn on the accessory or move it within range of the cell phone.

This results in the phone not connecting to the HFL system when the client enters the vehicle. You must unlink the hands-free accessory from the phone before the HFL system can reconnect.

Some phones have an Auto Answer setting that functions with a headset. This setting must be turned off or the HFL system cannot accept any incoming calls. When this setting is on, it blocks the HFL system from answering the call, and the call goes to voice mail. This can cause the client to think that the cell phone is not paired properly.

If the HFL system has six phones paired, it will not tell you that it has reached its maximum, and will not allow you to pair a new phone. To check how many phones are paired, press and release the HFL TALK button. After the beep, say "Phone setup list." The HFL system lists every assigned phone name paired with it, then finishes by saying "The entire list has been read. Returning to the main menu." Count number of phones listed. If there are six, you must delete one phone before adding a new one.

Pairing Checks

1. Is the cell phone compatible with the HFL?
2. Is the Bluetooth feature turned on?
3. Is the client using the HFL buttons, not the navigation buttons, when pairing?
4. Is the cell phone battery fully charged, and is there good signal strength when pairing?
5. Do a soft reset on the cell phone.
6. If the client is trying to pair a Blackberry® or Palm Treo™ device, make sure the client uses the shift key when entering the pass code. If the shift key is not pressed, the client may be entering letters. The HFL does not recognize letters.

For more information about pairing, refer to the cell phone owner's manual, or go to www.acura.com/handsfreelink.

DROPPED CALLS

Clients may perceive dropped calls as being an HFL system fault, but most dropped calls are resultant from cell phone and cell phone carrier issues. The HFL system does not directly handle the cell phone signal. It allows the cell phones to transmit the cell phone audio over the vehicle's audio system.

Before troubleshooting for dropped calls, confirm the cell phone settings

- Disable Audio Answer. If Auto Answer is enabled, incoming calls are routed to voice mail.
- Disable Always Ask/Trust, Authorize Device, or similar setting. If these settings are enabled, each time the HFL system attempts to link to the phone, the phone will ask if you want to connect. If you do not allow the connection, the HFL will not operate. The phone must be set to Never Ask, Authorize Device, etc. (based on the phone manufacturer and carrier) for permission. Refer to the cell phone owner's manual for more information.
- Disable Flip Open to a Answer. If this setting is enabled, the phone must remain open in the vehicle. If it is closed, the incoming calls are routed to voice mail.

Always confirm with the client if the number of dropped calls is higher while using the HFL system as opposed to using the cell phone only. Clients often confuse problems with their phone or carrier as a problem with the HFL system. The HFL system cannot control or determine:

- Cellular connection quality
- Signal strength
- Cellular coverage
- Ambient weather conditions that affect cellular signals

When a client complains about dropped calls, ask questions about when or where the calls are dropped, such as:

- Do you drive the same route on a regular basis?
- Does the call drop in the same location?
- Where do you keep your cell phone?
- Have you compared the number of dropped calls using the HFL versus making calls from the handset?
- Does your phone have an antenna that needs to be extended?

Many reasons for a dropped call are not related to the HFL system. Here are some causes for dropped calls:

- If the quantity of dropped calls is about the same when the client uses the HFL system versus the handset, the issue is likely due to the cellular phone or carrier.
- If the phone is equipped with a retractable antenna, it needs to be extended to maximize signal strength.
- If a client also notices that the calls tend to drop in the same areas, the HFL system may be operating normally, but something about the area diminishes cellular coverage to a point where the call drops.
- Hills or mountains can block or interfere with cellular signals.
- High-rise buildings, bridges, or other large structures may block or interfere with cellular signals.
- Placing the cell phone in a purse, in a metal briefcase, under the seat, in the glove box, or in the trunk can all affect signal reception.
- There are coverage gaps in the cellular service. When driving, a call is typically passed from one tower to another. If the client drives through an area where there is a coverage gap between towers,

the call drops.

- Electrical storms, heavy rain, or overcast conditions interfere with signal strength.
- The cell phone battery's state of charge can affect signal reception. A low battery may reduce the phone's ability to boost the antenna's power and function properly, especially in low signal strength areas. Some phone manufacturers trade off signal transmission and reception strength for battery life. As the battery weakens, the signal strength may also weaken. Some cell phones may operate more effectively than others in low signal strength areas, especially with a partially charged battery, and depending on whether or not the retractable antenna is fully extended (if applicable). On these models, make sure the antenna is always extended to maximize signal strength and extend battery life.

PHONE WILL NOT AUTOMATICALLY CONNECT THE HFL

If a client complains that their cell phone is not automatically connecting to the HFL system when they enter the vehicle, do this:

1. Make sure the Bluetooth feature is turned on in the cell phone
- 2.
3. Make sure the cell phone is properly paired to the HFL system.
4. Do a soft reset to the cell phone.
5. Check the battery and signal strength on the cell phone. Pairing a phone requires optimal signal strength and a nearly full battery.

INCOMING CALLS

If a client complains that they cannot receive incoming calls through the HFL system, see if the call is routing to the cell phone instead of the HFL system. An easy way to know if the call is routed to the cell phone is when the client says, "I can't hear the caller, but they can hear me."

1. Make sure the Bluetooth feature is turned on in the cell phone.
2. Make sure the cell phone is paired to the HFL system and linked
3. Make sure the answer settings in the cell phone are set to multi-key or any-key answer. If the phone is set to flip-open to answer, recommend changing the setting to Any Key or leaving the phone flipped open when using the HFL system.
4. Make sure the Audio Answer feature is turned off in the cell phone.
5. Do a soft reset to the phone.
6. Make sure the battery is fully charged and there is adequate signal strength.
7. Ask the client if they have set specific ring tones or ringer IDs to specific contacts. If they have, recommend returning them to a standard ring tone for all calls.
8. Make sure the client is pressing the HFL TALK button and not the HFL BACK button or the navigation buttons.

OUTGOING CALLS

If a client says that they cannot place a call using the HFL system, ask if the call was initiated through the HFL system or the cell phone itself.

1. Make sure the Bluetooth feature is turned on in the cell phone.
2. Make sure the cell phone is paired to the HFL system and linked.
3. Make sure the client is pressing the HFL TALK button before each command and going through the calling process correctly.
4. Make sure the client is pressing the HFT TALK button and not the HFL BACK button or the navigation buttons.
5. Check if the cell phone has an Authorized Connections or Trusted option.
6. Do a soft reset to the cell phone.

If the call is placed by the cell phone: The call will remain on the handset until you transfer it over to the HFL system. To continue the call on the HFL system, you must use the Transfer command by pressing and releasing the HFL TALK button during an active call and saying "Transfer." The client can now continue the call using the HFL system.

GLOSSARY OF TERMS

Auto Answer

This cell phone setting forces incoming calls to automatically be answered by the handset. Disable this feature on the phone when using the HFL system, as it may interfere with the HFL system answering incoming calls. Set the phone setting to Send Only, Any Key, or Multi-Key answer option.

Answer Options

These cell phone settings allow you to select how you would like to answer an incoming call on the handset. The answer option in the phone can affect inbound calls on the HFL system.

Authorized Connection

This cell phone setting allows the phone to connect automatically with the HFL system without prompting the client for permission to connect. In some instances, it can affect the ability of the phone to properly route sound to the HFL system.

Bluetooth Power

This cell phone function enables or disables the Bluetooth application. When using a hands free device such as HFL, the Bluetooth application needs to be enabled.

Discovery Mode

You need to have the cell phone in Discovery Mode to allow other devices with Bluetooth capabilities (such as the HFL system) to find the phone during the pairing process.

Downloaded Ringtones

A client gets these ringtones from an outside source, such as the internet or a mobile phone store.

HFL BACK button

Use this button on the steering wheel to end a call or return to a previous prompt in the HFL menu. Pressing the button twice or holding it down returns you to the HFL main menu.

Fig. 10: Identifying HFL Talk Buttons And HFL Back Buttons
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HFL TALK button

Use this button on the steering wheel to give commands. Press the button before a voice command is given.

Hard Reset

Hard resets clear the saved settings in the cell phone and restores it to the factory defaults. A hard reset should be done only as a last resort.

Linking

This is when your paired phone is actively ready to use the HFL system. You can pair up to six phones to the HFL system, but only one phone can be linked at a time. If two paired phones are in the vehicle, only the phone that is linked can use the HFL system and functions. The second phone must be used as a normal handset.

Pairing

A description for linking two Bluetooth devices together. In this case, you are linking a cell phone with the HFL system. After the pairing process is complete, the devices are able to recognize each other and communicate wirelessly via Bluetooth.

Soft Reset

This helps to restore the basic functions of the phone. To do a soft reset, turn the phone power off, remove and reinsert the cell phone battery, then turn the phone back on.

Software Version

This refers to the software version loaded in the cell phone. The software version that was tested and determined to be compatible with the HFL system may be listed on the HFL web site. Not all software versions are compatible with the HFL system.

Standard Ringtone

These ringtones come factory-installed on the cell phone.

CLEARING THE SYSTEM**NOTE:**

- **This operation clears the HFL system of all passcode(s), any paired phones, and all names in the HFL phonebook.**
- **Clearing the HFL system is recommend before selling the vehicle.**

1. Press and release the TALK button. After the beep, say "Clear" and the HFL will respond, "This process will clear all paired phones, clear all entries in the phonebook, and clear the passcode. Is this what you would like to do?".
2. Press and release the TALK button. After the beep, say "Yes" and the HFL will respond, "Preparing to clear all paired phones, all phonebook entries, and the passcode. This may take up to 2 minutes to complete".

SELF-DIAGNOSTIC FUNCTION**NOTE:**

This procedure should be used only if HDS is unavailable.

To run the self-diagnostic function, do the following:

1. Turn the ignition switch to ON (II).
2. Press and hold the HFL Back button for more than 5 seconds.
3. When the HandsFreeLink system enters the self-diagnostic function, the following will occur.
 - If the system has not completed testing for DTCs, the HandsFreeLink system says The hands free system test is in progress.
 - If there is no DTC, the HandsFreeLink system says The hands free system is OK.
 - If there is any DTC, the HandsFreeLink system says The hands free system needs to be serviced.

NOTE:

- **The self-diagnostic function can only be initiated while the HFL is in its idle state.**
- **The self-diagnostic function is considered to start once the 5 seconds**

press and hold is detected, and ends when the units returns to idle state.

HFL SYSTEM TROUBLESHOOTING

NOTE:

- You must be able to duplicate the client's concern to successfully diagnose the problem.
- Always use the client's phone.
- Make sure the phone is approved and configured correctly. Online, go to www.acura.com, or call the HFL support desk at 888-528-7876 for further

assistance.

1. Connect the HDS to the DLC.
2. Turn the ignition switch to ON (II).
3. Check for DTCs.

Are any DTCs indicated?

YES - Repair the indicated DTCs and recheck.

NO - Go to Step 4.

4. Try to duplicate the problem.

Can you duplicate the problem?

YES - Go to Step 5.

NO - The system is OK at this time.

5. Pair the phone to a known-good vehicle (same model, year, and trim), and try duplicate the problem.

Does the phone have the same problem on the known-good vehicle ?

YES - Call the HFL support desk at 888-528-7876 to make sure the phone is configured correctly and has the correct software. If the phone is configured correctly, it is either a characteristic of the HFL system, or a characteristic of the particular approved phone being used. Explain to your client that this is a system characteristic. Another phone from the approved phone list may give more favorable results.

NO - Substitute a known-good HandsFreeLink control unit and recheck. If the problem goes away, replace the original HandsFreeLink control unit.

DTC TROUBLESHOOTING

DTC B1775: MICROPHONE INPUT/OUTPUT SHORT TO POWER/OPEN

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN system diagnosis test mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back to ON (II).
3. Check for DTCs with the HDS.

Is DTC B1775 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time.

4. Turn the ignition switch to LOCK (0).
5. Remove the roof console (see **HEADLINER REMOVAL/INSTALLATION**) and the console rear trim (see **CENTER CONSOLE REAR TRIM REMOVAL/ INSTALLATION**).
6. Disconnect the 20P connector from the roof console and the 28P connector from the HandsFreeLink control unit.
7. Turn the ignition switch to ON (II).
8. Measure the voltage between HandsFreeLink control unit the 28P connector No. 13 terminal and body ground.

HANDSFREELINK CONTROL UNIT 28P CONNECTOR

Wire side of female terminals

Fig. 13: Identifying Voltage Between HandsFreeLink Control Unit 28P Connector No. 13 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the faulty harness between the HandsFreeLink control unit and the roof console.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Check for continuity between HandsFreeLink control unit 28P connector No. 13 terminal and roof console 20P connector No. 8 terminal.

HANDSFREELINK CONTROL UNIT 28P CONNECTOR

Wire side of female terminals

ROOF CONSOLE 20P CONNECTOR

Wire side of female terminals

Fig. 14: Identifying For Continuity Between HandsFreeLink Control Unit 28P Connector No. 13 Terminal And Roof Console 20P Connector No. 8 Terminal
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good HandsFreeLink control unit, then recheck. If the symptom goes away, replace the original HandsFreeLink control unit.

NO - Replace the faulty harness between the HandsFreeLink control unit and the roof console.

DTC B1776: MICROPHONE INPUT/OUTPUT SHORT TO GROUND/OPEN

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN system diagnosis test mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back to ON (II).
3. Check for DTCs with the HDS.

Is DTC B1776 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time.

4. Turn the ignition switch to LOCK (0).
5. Remove the roof console (see **HEADLINER REMOVAL/INSTALLATION**) and the glove box (see **GLOVE BOX REMOVAL/INSTALLATION**).
6. Disconnect the 20P connector from the roof console and the 28P connector from the HandsFreeLink control unit.

7. Check for continuity between body ground and the No. 13 and No. 14 terminals of the HandsFreeLink control unit 28P connector individually, then between No. 12 and No. 13 terminals.

HANDSFREELINK CONTROL UNIT 28P CONNECTOR

Wire side of female terminals

Fig. 15: Identifying For Continuity Between Body Ground And No. 13 And No. 14 Terminals Of HandsFreeLink Control Unit 28P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the faulty harness between the HandsFreeLinks control unit and the roof console.

NO - Go to step 8.

8. Check for continuity between the terminals shown of the HandsFreeLink control unit 28P connector and the roof console 20P connector.

HANDSFREELINK CONTROL UNIT 28P CONNECTOR

Wire side of female terminals

ROOF CONSOLE 20P CONNECTOR

Wire side of female terminals

Fig. 16: Identifying For Continuity Between Terminals Of HandsFreeLink Control Unit 28P Connector And Roof Console 20P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Replace the faulty harness between the HandsFreeLink control unit and the roof console.

9. Check if the vehicle is equipped with a navigation system.

Is the vehicle navigation equipped?

YES - Go to step 10.

NO - Substitute a known-good HFL control unit and recheck.

10. Disconnect the 14P connector from the navigation unit.
11. Check for continuity between body ground and the No. 27 and No. 28 terminals of the HandsFreeLink control unit 28P connector individually, then between No. 26 and No. 27 terminals.

HANDSFREELINK CONTROL UNIT CONNECTOR (28P)

Wire side of female terminals

Fig. 17: Identifying For Continuity Between Body Ground And No. 27 And No. 28 Terminals Of HandsFreeLink Control Unit 28P Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the faulty harness between the HandsFreeLink control unit and the navigation unit.

NO - Go to step 12.

12. Check for continuity between the terminals shown of the HandsFreeLink control unit 28P connector and the navigation unit connector B (14P).

NAVIGATION UNIT CONNECTOR B (14P)
Wire side of female terminals

Fig. 18: Identifying For Continuity Between Terminals Of HandsFreeLink Control Unit 28P Connector And Navigation Unit Connector B (14P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Substitute a known-good HandsFreeLink control unit, then recheck. If the symptom goes away, replace the original HandsFreeLink control unit. If the symptom does not go away, replace the faulty navigation unit.

NO - Replace the faulty harness between the HandsFreeLink control unit and the navigation unit.

DTC B1779: HFL SWITCH (HFL TALK/HFL BACK BUTTONS) CIRCUIT OPEN/SHORT

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN system diagnosis test mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), then start the vehicle and turn the steering wheel back and forth several times.
3. Check for DTCs with the HDS.

Is DTC B1779 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time.

4. Turn the ignition switch to LOCK (0).
5. Do the HFL switch test (see HFL SWITCH TEST).

Is the switch OK?

YES - Go to step 6.

NO - Replace the cable reel subharness (see **STEERING WHEEL DISASSEMBLY/REASSEMBLY**).

6. Remove the glove box (see **GLOVE BOX REMOVAL/INSTALLATION**).
7. Disconnect the 28P connector from the HandsFreeLink control unit.
8. Disconnect the 20P connector from the cable reel subharness.
9. Turn the ignition switch to ON (II).
10. Check for voltage on the cable reel subharness 20P connector terminal No. 8.

Is there voltage?

YES - Repair a short to power on BLU wire.

NO - Go to step 11.

11. Check for continuity between the HandsFreeLink control unit 28P connector No. 2 terminal and cable reel subharness 20P connector No. 8 terminal.

HANDSFREELINK CONTROL UNIT 28P CONNECTOR
Wire side of female terminals

CABLE REEL SUBHARNESS 20P CONNECTOR
Wire side of female terminals

Fig. 19: Identifying For Continuity Between HandsFreeLink Control Unit 28P Connector No. 2 Terminal And Cable Reel Subharness 20P Connector No. 8 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair open in the BLU wire between the switch, cable reel, and HandsFreeLink control unit.

12. Check for continuity between the cable reel subharness 20P connector No. 9 terminal and the audio unit connector B (32P) No. 3 terminal.

Fig. 20: Identifying For Continuity Between Cable Reel Subharness 20P Connector No. 9 Terminal And Audio Unit Connector B (32P) No. 3 Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose or poor connections at the audio unit, HandsFreeLink control unit, and HFL switch. If the connections are OK, substitute a known-good HandsFreeLink control unit. If the problem is gone, replace the original control unit.

NO - Repair open in the wire between the switch, cable reel, and the audio unit.

DTC B1780: HFL SWITCH (HFL TALK/HFL BACK BUTTONS) CIRCUIT SHORT

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN system diagnosis test mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), then start the vehicle and turn the steering wheel back and forth several times.
3. Check for DTCs with the HDS.

Is DTC B1780 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time.

4. Turn the ignition switch to LOCK (0).
5. Do the HFL switch test (see **HFL SWITCH TEST**).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT HandsFreeLink System - MDX

Is the switch OK?

YES - Go to step 6.

NO - Replace the cable reel subharness (see **STEERING WHEEL DISASSEMBLY/REASSEMBLY**).

6. Turn the ignition switch to LOCK (0).
7. Remove the glove box (see **GLOVE BOX REMOVAL/INSTALLATION**).
8. Disconnect the 28P connector from the HandsFreeLink control unit.
9. Disconnect the 20P connector from the cable reel subharness.
10. Check for continuity between the HandsFreeLink control unit 28P connector No. 2 terminal and body ground.

HANDSFREELINK CONTROL UNIT 28P CONNECTOR

Wire side of female terminals

Fig. 21: Identifying For Continuity Between HandsFreeLink Control Unit 28P Connector No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire.

NO - Replace the HandsFreeLink control unit.

DTC B1785: INCORRECT CONFIGURATION (VEHINFO FRAME)

1. Connect the HDS to the DLC.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it to ON (II) and wait 6 seconds or more.
4. Check for DTC with the HDS.

Is DTC B1785 indicated?

YES - Gauge control module is faulty, replace the gauge control module.

NO - Intermittent failure. VEHINFO frame is OK at this time. Check for poor connections or loose terminals at the HandsFreeLink control unit.

DTC B1786: HANDSFREELINK CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (VEHINFO FRAME)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Connect the HDS to the DLC.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it to ON (II) and wait 6 seconds or more.
4. Check for DTC with the HDS.

Is DTC B1786 indicated?

YES - Go to step 5.

NO - Intermittent failure. VEHINFO frame is OK at this time. Check for poor connections or loose terminals at the HandsFreeLink control unit.

5. Check for DTC with the HDS.

Is DTC B1011, B1032, B1060, B1061, B1205, B1206, B1207, B1906, B1956, B2157, B2160 indicated?

YES - Go to step 6.

NO - HandsFreeLink control unit is faulty, replace the HandsFreeLink control unit.

6. Select the UNIT INFORMATION MENU from the HDS, and do the CONNECTED UNIT.
7. Check the AVAILABLE/NOT AVAILABLE information of the gauge control module in the CONNECTED UNIT.

Is the information indicator NOT AVAILABLE?

YES - Go to step 8.

NO - Gauge control module is faulty, replace the gauge control module.

8. Turn the ignition switch to LOCK (0).
9. Disconnect the gauge control module connector A (12P).
10. Turn the ignition switch to ON (II).
11. Measure the voltage between body ground and gauge control module connector A (12P) No. 7 terminal.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 22: Identifying Voltage Between Body Ground And Gauge Control Module Connector A (12P) No. 7 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 12.

NO - Check the No. 21 (7.5 A) fuse in the under-dash fuse/relay box. If the fuse are good, repair open in the wire between the No. 21 fuse in the under-dash fuse/relay box and the gauge control module.

12. Turn the ignition switch to LOCK (0).
13. Disconnect the gauge control module connector B (24P).
14. Check for continuity between body ground and gauge control module connector A (12P) No. 2 terminal and gauge control module connector B (24P) No. 13 terminal individually.

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 23: Identifying For Continuity Between Body Ground And Gauge Control Module Connector A (12P) No. 2 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GAUGE CONTROL MODULE CONNECTOR B (24P)

Wire side of female terminals

Fig. 24: Identifying For Continuity Between Body Ground And Gauge Control Module Connector B (24P) No. 13 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 15.

NO - Repair open in the wire(s) between body ground and the gauge control module.

15. Disconnect the power tailgate control unit connector C (14P).
16. Check for continuity between the power tailgate control unit connector C (14P) No. 7 terminal and gauge control module connector A (12P) No. 5 terminal.

POWER TAILGATE CONTROL UNIT CONNECTOR C (14P)

Wire side of female terminals

GAUGE CONTROL MODULE CONNECTOR A (12P)

Wire side of female terminals

Fig. 25: Identifying For Continuity Between Power Tailgate Control Unit Connector C (14P) No. 7 Terminal And Gauge Control Module Connector A (12P) No. 5 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Gauge control module is faulty, replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

NO - Repair open in the wire between power tailgate control unit and the gauge control module.

DTC B1792: HANDSFREELINK CONTROL UNIT INTERNAL ERROR

1. Connect the HDS to the DLC.
2. Clear the DTCs with the HDS.
3. Turn the ignition switch to LOCK (0), and then back to ON (II).
4. Check for DTCs with the HDS.

Is DTC B1792 indicated?

YES - Replace the HandsFreeLink control unit (see **CONTROL UNIT INPUT TEST/REPLACEMENT**).

NO - Intermittent failure, the system is OK at this time.

SYMPTOM TROUBLESHOOTING**THE MID DISPLAYS AN HFL MESSAGE THAT DOES NOT GO AWAY AFTER PRESSING THE HFL BACK BUTTON**

1. Connect the HDS to the DLC.
2. Clear the DTCs with the HDS.
3. Turn the ignition switch to LOCK (0), and then to ON (II).
4. Check for DTCs.

Are there any DTCs indicate?

YES - Repair the indicated DTCs.

NO - Go to step 5.

5. Turn the ignition switch to LOCK (0).
6. Substitute a known-good HandsFreeLink control unit, then turn the ignition switch to ON (II) and recheck the MID.

Are the messages cleared?

YES - Replace the original HandsFreeLink control unit.

NO - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

THE HFL SYSTEM DOES NOT RECOGNIZE ALL VOICE PROMPTS

1. Connect the HDS to the DLC.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT HandsFreeLink System - MDX

2. Clear the DTCs with the HDS.
3. Turn the ignition switch to LOCK (0), and then to ON (II).
4. Check for DTCs.

Are there any DTCs indicated?

YES - Repair the indicated DTCs.

NO - Go to step 5.

5. Check if the problem is duplicated.

Can the client's problem be duplicated?

YES - Go to step 6.

NO - The system is OK at this time. Ask the client to demonstrate the problem.

6. Check if the navigation system can recognize for voice prompts.

Can the voice prompts be recognized?

YES - Go to step 7.

NO - Refer to the navigation system troubleshooting.

7. Pair the client's phone to a known-good vehicle and try to duplicate the problem.

Can you duplicate the problem?

YES - Call the HFL support desk at 888-528-7876, and inquire if there are any known issues for the problem. If there are no known issues, explain to the client this is a system characteristic and cannot be improved at this time.

NO - Substitute a known-good HFL/navigation microphone. If the problems still present, substitute a known-good HandsFreeLink control unit. If the problem goes away, replace the original HFL/ navigation microphone.

THE HFL SYSTEM IS LOCKED AND THE PASS CODE HAS BEEN LOST OR FORGOTTEN

1. Connect the HDS to the DLC.
2. Turn the ignition switch to ON (II).
3. From the Body Electrical menu, then select HandsFreeLink.
4. Select Miscellaneous Tests, then select Pass code reset.
5. Follow the HDS system prompts to reset the pass code.

HFL SWITCH TEST

1. Remove the driver's airbag (see **DRIVER'S AIRBAG REPLACEMENT**).
2. Disconnect the 20P connector (A).

Fig. 26: Identifying 20P Connector Terminals
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Measure the resistance between the No. 8 and No. 9 terminals in each switch position according to the table.

HFL Switch

HFL SWITCH POSITION

Position	Resistance
No buttons pressed	About 1 k ohms
HFL TALK button pressed	About 185 ohms
HFL BACK button pressed	About 45 ohms

4. If the resistance is not as specified, replace the switch (see **STEERING WHEEL DISASSEMBLY/REASSEMBLY**).

CONTROL UNIT INPUT TEST/REPLACEMENT

1. Remove the console rear trim (see **CENTER CONSOLE REAR TRIM REMOVAL/INSTALLATION**).
2. Disconnect the 28P connector (A) from the HandsFreeLink control unit (B).

Fig. 27: Identifying 28P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals for a good pinfit to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, go to step 4.
4. Reconnect the connector, and make these input tests at the connector.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 5.

TEST CONDITION

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
1	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G506) • An open in the wire
15	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 5 (10 A) fuse in the driver's under-dash fuse/relay box • An open in the wire
16	PUR	Ignition switch ACC (I) or ON (ID)	Measure the voltage to ground: There should be battery voltage.	• Blown No. 32 (10 A) fuse in the driver's under-dash fuse/relay box • An open in the wire

5. Disconnect the 28P connector again, and make this input test at the connector.
 - If the test indicates a problem, find and correct the cause, then recheck the system.
 - If the input test proves OK, the HandsFreeLink control unit must be faulty, replace it.

TEST CONDITION

Cavity	Wire	Test condition	Test: Desired result	Possible cause if result is not obtained
19	LT GRN	Under all conditions	Check for continuity between No. 19 terminal and the driver's under-dash fuse/relay box connector X (39P) No. 27 terminal: There should be continuity.	An open in the wire
		Driver's under-dash fuse/relay box connector X (39P) disconnected	Check for continuity to ground: There should be no continuity.	Short to ground

HFL/NAVIGATION MICROPHONE REMOVAL/INSTALLATION**NOTE:**

- Put on gloves to protect your hands.
- Take care not to scratch the dashboard and related parts.
- Lay a workshop towel under the parts when working on them to protect the face panel from scratches or other damage.

1. Remove the roof console (see **HEADLINER REMOVAL/INSTALLATION**).
2. Remove the screws and the printed circuit board (A).

Fig. 28: Identifying Screws And Printed Circuit Board
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (B) from the printed circuit board.
4. Remove the screws and the microphone (A). ©

Fig. 29: Identifying Screws And Microphone

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the microphone in the reverse order of removal.

2007-09 ACCESSORIES AND EQUIPMENT

Headlight Leveling System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Headlight Leveling System Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM DESCRIPTION

HEADLIGHT LEVELING SYSTEM

The headlight leveling system is composed of the headlight leveling control unit, the left-front and left-rear suspension stroke sensors, and the left and right headlight leveling motors.

The system uses the left-front and left-rear suspension stroke sensors to monitor the vehicle ride height. The ride height is monitored every 3 minutes while the vehicle is running with the headlight switch ON, and 8 seconds after the vehicles stops with the ignition and headlight switches ON.

If the control unit detects a ride height change, the control unit controls the headlight leveling motors to adjust the headlight vertical position.

Fig. 2: Identifying Headlight Leveling System

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SUSPENSION STROKE SENSORS

The suspension stroke sensors are also one of the active damper system components. The headlight leveling system uses the left-front and left-rear suspension stroke sensor signals. The left-front suspension stroke sensor is located at the left front suspension area. A short link connects the arm of the sensor to the stabilizer bar. The left-rear suspension stroke sensor is located at the left rear suspension area. A short link connects the arm of the sensor to the damper assembly.

The sensors detect the vehicle ride height and sends a voltage signal (about 0.4-4.6 V) to the headlight leveling control unit.

HEADLIGHT LEVELING CONTROL UNIT

The headlight leveling control unit is located under the passenger's side of the dashboard. The headlight leveling control unit uses the voltage signals it receives from the left-front and left-rear suspension stroke sensors to determine the voltage signal (about 2-11 V) it sends to control the left and right leveling motors.

HEADLIGHT LEVELING MOTORS

The headlight leveling motors are located behind both headlights, and they adjust the headlights vertically based upon the voltage signals (about 2-11 V) they receive from the headlight leveling control unit.

CIRCUIT DIAGRAM

Fig. 3: Headlight Leveling Control Unit - Circuit Diagram
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

SUSPENSION STROKE SENSOR CIRCUIT TROUBLESHOOTING

NOTE: Before troubleshooting, check the No. 31 (15 A) fuse in the under-dash fuse/relay box. Check the active damper system for DTCs and troubleshoot those codes first.

1. Raise the vehicle, make sure it is securely supported.
2. Disconnect the 3P connector (A) from the left-front stroke sensor (B).

Fig. 4: Identifying Left-Front Stroke Sensor And 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 3P connector (A) from the left-rear stroke sensor (B).

Fig. 5: Identifying Left-Rear Stroke Sensor And 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the ignition switch to ON (II).
5. Turn the combination light (headlight) switch ON.

6. Check for continuity between the left-front and left-rear suspension stroke sensors 3P connector No. 3 terminal and body ground individually.

*: Left-rear suspension stroke sensor

Fig. 6: Identifying Continuity Between Suspension Stroke Sensors 3P Connector Terminal 3 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 7.

NO - Repair open in the wire or poor ground (G401), if the wire is OK, replace the headlight leveling control unit.

7. Measure the voltage between the left-front and left-rear suspension stroke sensor 3P connector No. 1 terminal and body ground individually.

*: Left-rear suspension stroke sensor

Fig. 7: Measuring Voltage Between Suspension Stroke Sensor 3P Connector Terminal 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 8.

NO - Check for an open or a short in the wire between the headlight leveling control unit and the left-front (or left-rear) suspension stroke sensor. If the wire is OK, replace the left-front (or left-rear) suspension stroke sensor.

8. Remove the nut (A) and the left-front suspension stroke sensor from the suspension side.

Fig. 8: Identifying Left-Front Suspension Stroke Sensor And Nut With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the nut (A) and the left-rear suspension stroke sensor from the suspension side.

Fig. 9: Identifying Left-Rear Suspension Stroke Sensor And Nut With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Reconnect the 3P connector to each suspension stroke sensor.
11. Measure the voltage between the headlight leveling control unit 16P connector No. 4 and No. 7 terminals, and No. 6 and No. 12 terminals while the suspension stroke sensor arm (A) is moved.

Fig. 10: Identifying Suspension Stroke Sensor Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 11: Measuring Voltage Between Headlight Leveling Control Unit 16P Connector Terminals 6 And 12
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.5-4.5 V?

YES - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the headlight leveling control unit and the left-front (or left-rear) suspension stroke sensor, if the connections are OK, replace the left-front (or left-rear) suspension stroke sensor.

NO - Check for an open or a short in the wire between the headlight leveling control unit and the left-front (or left-rear) suspension stroke sensor, if the wire is OK, replace the left-front (or left-rear) suspension stroke sensor.

HEADLIGHT LEVELING CONTROL UNIT INPUT TEST

1. Turn the ignition switch to LOCK (0), and remove the glove box (see **GLOVE BOX REMOVAL/INSTALLATION**).
2. Disconnect the 16P connector (A) from the headlight leveling control unit (B).

Fig. 12: Identifying Headlight Leveling Control Unit And 16P Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals are OK, go to step 4.
4. With the connector still disconnected, make these input tests at the connector.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 5.

CAVITY AND TEST CONDITION CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
15	BLU	Ignition switch ON (II), raise the vehicle, make sure it is securely supported, and rotate one of the front wheels slowly with the	Measure the voltage between the No. 15(+) and No.9(-) terminals: There should be 0-5 V or more	• Faulty PCM • An open in the wire • A short to

2008 Acura MDX

7	LT BLU			

HEADLIGHT LEVELING MOTOR INPUT TEST

1. Turn the ignition switch to LOCK (0).
2. Disconnect the 3P connector (A) from the headlight leveling motor (B).

Fig. 13: Identifying Headlight Leveling Motor And 3P Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals are OK, go to step 4.
4. Reconnect the connector to the headlight leveling motor, and make these input tests at the connector.
 - If any tests indicate a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, replace the headlight leveling motor (see **HEADLIGHT LEVELING MOTOR REPLACEMENT**).

CAVITY AND TEST CONDITION CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
1	BRN	Ignition switch ON (II)	Measure the voltage to ground: There should be about 2-12 V. NOTE: Depending on the headlight leveling position.	• Faulty headlight leveling control unit • An open in the wire
2	GRN	Ignition switch ON (II)	Measure the voltage to ground: There should be less than 1 V.	• Faulty headlight leveling control unit • An open in the wire

3	BLU	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	- Faulty headlight leveling control unit - An open in the wire
---	-----	----------------------------	--	--

SUSPENSION STROKE SENSOR REPLACEMENT

NOTE:

- Right side of suspension stroke sensor for active damper system is the same procedure as left side suspension stroke sensor.
- After install the rear suspension stroke sensor, do the memorizing rear suspension full rebound position (see MEMORIZING REAR SUSPENSION FULL REBOUND POSITION).

- Raise the vehicle, make sure it is securely supported.
- Disconnect the 3P connector (A) from the suspension stroke sensor (B).

LEFT-FRONT

Fig. 14: Identifying Left And Front Suspension Stroke Sensor From 3P Connector With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

LEFT-REAR

Fig. 15: Identifying Left And Rear Suspension Stroke Sensor From 3P Connector With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolt and nut, then remove the suspension stroke sensor.
4. Install the sensor in the reverse order of removal.
5. After installing, do the headlight initial position learning procedure (see **HEADLIGHT INITIAL POSITION LEARNING PROCEDURE**).

HEADLIGHT LEVELING MOTOR REPLACEMENT

REMOVAL

1. Remove the headlight assembly (see **HEADLIGHT REPLACEMENT**).
2. Turn the headlight leveling motor (A) 45° counterclockwise.

Fig. 16: Identifying Headlight Leveling Motor

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the adjuster (B) of the headlight leveling motor until the headlight leveling motor shaft (C) is removed from the headlight.

INSTALLATION

1. Insert the headlight leveling motor shaft (A) into the headlight housing, then turn the adjuster (B) until the shaft connects to the headlight.

Fig. 17: Identifying Headlight Leveling Motor Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the headlight leveling motor (C) 45° clockwise to install to the headlight.
3. Tighten the adjuster until fully it is secure, but do not over tighten, then back it off 9 turns.
4. Insert the headlight in the reverse order of removal.
5. After installing, do the headlight leveling motor initial position learning procedure (see **HEADLIGHT INITIAL POSITION LEARNING PROCEDURE**)

HEADLIGHT INITIAL POSITION LEARNING PROCEDURE

Do the headlight initial position learning when any of the related parts of the headlight leveling system shown is replaced:

- Headlight
- HID unit
- Left-front suspension stroke sensor
- Left-rear suspension stroke sensor

- Headlight leveling motor
- Headlight leveling control unit

LEARNING PROCEDURE

Before learning the headlights:

- Park the vehicle on a level surface.
 - Make sure the tire pressures are correct.
1. Turn the ignition switch to LOCK (0).
 2. Remove all of the baggage from the vehicle.
 3. Slide the front seats backward fully.
 4. Have the driver (about 165 lb (75 kg)) or someone who weighs the same sit in the driver's seat.
 5. Connect the HDS to the data link connector.
 6. Jump the SCS line with the HDS.
 7. Turn the ignition switch ON (II).
 8. Within 5 seconds, turn the headlights (low beam) or passing switch ON and OFF three times repeatedly, and leave them on.
 - If the headlights aiming moves down (about 2 in. at 10 feet), then returns to the original position, the initial position learning is complete.
 - If the headlights aiming doesn't move, go to step 1 and repeat the procedure.
 9. Turn the ignition switch to LOCK (0), and disconnect the HDS from the data link connector.
 10. Adjust the headlight aim to conform with the applicable requirements.

Fig. 18: Identifying Headlight Aiming Blinking Pattern
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Homelink Remote Control System-MDX

CIRCUIT DIAGRAM

**Fig. 1: Homelink Remote Control System - Circuit Diagram**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

NOTE: If the HomeLink will not open the client's garage, do the following procedures.

1. Press any of the buttons on the HomeLink unit.
 - If the red indicator comes on, go to step 3.
 - If the red indicator does not come on, go to step 2.
2. Measure the voltage between the No. 1 (+) and No. 2 (-) terminals of the roof console 20P connector (A). There should be battery voltage.
 - If the voltage is not as specified, check for these problems:
 - A blown No. 6 (7.5 A) fuse in the under-dash fuse/relay box.
 - A faulty under-dash fuse/relay box.
 - An open in the wire.
 - Poor ground (G601).
 - If the voltage is specified, go to step 3.

Fig. 2: Measuring Voltage Between Roof Console 20P Connector Terminals 1 And 2
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Make sure the Genie remote transmitter (test remote) has fresh batteries.
4. Clear any previously learned codes by pressing and holding the two outside buttons (A) on the HomeLink unit (B) for about 20 seconds. When the red indicator (C) on the unit starts blinking, release the buttons.

Fig. 3: Identifying Homelink Unit And Red Indicator, Buttons

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Point the test remote transmitter (A) straight up exactly 4.0 in. (101.6 mm) away from the HomeLink unit (B).

**Fig. 4: Identifying Remote Transmitter Button And Homelink Unit Buttons**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Press and hold the test transmitter button and one of the HomeLink unit buttons (C) at the same time.
7. Wait for about 20 seconds while watching the red indicator (D) on the HomeLink unit.
 - If the red indicator starts out blinking slowly and then blinks faster, the unit is OK. Release the buttons, then clear the learned code (see step 1). Explain to the client that garage door remote transmitters come in two types: fixed code and rolling code. Each type has its own programming method, and each method is covered in the owner's manual. If the customer has concerns about the HomeLink unit, have the client contact the HomeLink the assistance desk at 800-355-3515. On the internet, go to www.homelink.com.
 - If the red indicator does not blink, faulty HomeLink unit; replace the roof console (see **INTERIOR LIGHT SWITCH TEST/REPLACEMENT**).

2007-09 ACCESSORIES AND EQUIPMENT

Hood - MDX

HOOD ADJUSTMENT

1. Remove these items:
 - Front bulkhead cover (see **FRONT BULKHEAD COVER REPLACEMENT**)
 - Hood support strut, both sides (see **HOOD SUPPORT STRUT REPLACEMENT**)
2. Slightly loosen each bolt (A).

Fig. 1: Identifying Hood Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Adjust the hood alignment in this sequence:
 - Adjust the hood right and left, as well as forward and rearward, by using the elongated holes in the hood hinges (B).

- Turn the hood edge cushions (C), as necessary, to make the hood fit flush with the body at the front and side edges.
- 4. Adjust the hood latch (D) to obtain the proper height at the forward edge, and move the hood latch right or left until the striker (E) is centered in the hood latch.
- 5. Tighten the bolts to the specified torque.
- 6. Check that the hood opens properly and closes securely.
- 7. Apply touch-up paint to the hinge mounting bolts and around the hinges, and let the paint dry.
- 8. Apply multipurpose grease to the hood latch and hood hinges as indicated by the arrows.

Fig. 2: Identifying Grease Area Of Hood Latch And Hood Hinges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 9. Reinstall all of the removed parts.

HOOD SUPPORT STRUT REPLACEMENT

NOTE: Use eye protection when prying support strut clip.

1. With the help of an assistant, use a flat-tip screwdriver (A) to pry the support strut clips (B) of the support strut (C) on the hood and body, then release the support strut from the pivot bolts (D). Do not remove the clips from the support strut.

Fig. 3: Identifying Hood Support Strut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply multipurpose grease to each pivot.

Fig. 4: Applying Multipurpose Grease To Each Pivot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Set the clips (A) on the original position, then reattach the support strut (B) on the pivot bolts (C) by pushing on the support strut.

HOOD SEAL REPLACEMENT

1. Using a clip remover, detach the clips, then remove the hood seal (A). Take care not to scratch the hood.

Fastener Locations

▷ : Clip, 8

Fig. 5: Identifying Hood Seal Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the seals in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

HOOD INSULATOR REPLACEMENT

1. Using a clip remover, detach the clips. Release the hooks (A), then remove the hood insulator (B). Take care not to scratch the hood.

Fastener Locations

▷ : Clip, 7

Fig. 6: Identifying Hood Insulator Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the insulator in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips into place securely.

2007-09 ACCESSORIES AND EQUIPMENT

Horns - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Horns Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CIRCUIT DIAGRAM

Fig. 2: Horn Circuit Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

HORN TEST/REPLACEMENT

1. Remove the upper grille (see **FRONT GRILLE REPLACEMENT**).
2. Disconnect the 1P connector (A) from each horn (B).

Fig. 3: Identifying 1P Connector And Horn

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the horn by connecting battery power to the terminal (A) and grounding the bracket (B). The horn should sound.

Fig. 4: Identifying Terminal And Bracket

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If it fails to sound, replace it.

HORN SWITCH TEST

1. Remove the steering column covers (see COLUMN COVER REMOVAL/INSTALLATION).
2. Disconnect the dashboard wire harness 20P connector (A) from the cable reel (B).

Fig. 5: Identifying Dashboard Wire Harness 20P Connector And Cable Reel
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a jumper wire, connect the dashboard wire harness 20P connector No. 2 terminal to body ground. The horns should sound.
 - If the horns sound, go to step 4.
 - If the horns do not sound, check these items:
 - No. 11 (15 A) fuse in the main under-hood fuse box.
 - Horn (see **HORN TEST/REPLACEMENT**)
 - MICU
 - An open in the wire.

Fig. 6: Identifying Dashboard Wire Harness 20P Connector No. 2 Terminal To Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Reconnect the dashboard wire harness 20P connector (A) to the cable reel (B).

Fig. 7: Identifying Dashboard Wire Harness 20P Connector, Cable Reel And Horn Switch 1P Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the driver's airbag assembly (see **DRIVER'S AIRBAG REPLACEMENT**), and disconnect the horn switch 1P terminal (C) from the driver's airbag.
6. Check for continuity between the dashboard wire harness 20P connector No. 2 terminal and the horn switch 1P terminal.
 - If there is continuity, check the installation of the driver's airbag assembly and the steering wheel. If the installation is correct, faulty horn switch; replace the driver's airbag assembly.
 - If there is no continuity, repair an open in the wire between the cable reel and the horn switch 1P terminal, if the wire harness is OK, replace the cable reel (see **CABLE REEL REPLACEMENT**).

Fig. 8: Identifying Continuity Between Dashboard Wire Harness 20P Connector No. 2 Terminal And Horn Switch 1P Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2007-09 ENGINE PERFORMANCE

Idle Control System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Idle Control System Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC TROUBLESHOOTING

DTC P0506: IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
4. Check under these DATA LIST parameter conditions with the HDS:
 - ECT SENSOR 1 above 158°F (70°C)
 - IAT SENSOR above 32°F (0°C)
 - Vehicle speed is 0 mph (0 km/h)
 - ST FUEL TRIM between 0.73-1.47
 - FSS is CLOSED
5. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 6.

NO - If the screen indicates PASSED, go to step 15. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, go to step 4 and recheck.

6. Remove the air intake duct from the throttle body (see THROTTLE BODY REMOVAL/INSTALLATION).
7. Check for dirt, carbon, or damage in the throttle bore.

Is there dirt, carbon, or damage in the throttle bore?

YES - If there is dirt or carbon, clean the throttle body (see THROTTLE BODY CLEANING). Also check for damage to the air cleaner element (see AIR CLEANER ELEMENT INSPECTION/REPLACEMENT), then go to step 9. If there is damage in the throttle bore, go to step 8.

NO - Check the A/C system or power steering system, then go to step 9.

8. Replace the throttle body (see THROTTLE BODY REMOVAL/INSTALLATION).
9. Reset the PCM with the HDS.
10. Do the PCM idle learn procedure (see PCM IDLE LEARN PROCEDURE).
11. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Idle Control System - MDX

fan comes on, then let it idle 20 seconds.

12. Check under these DATA LIST parameter conditions with the HDS:

- ECT SENSOR 1 above 158°F (70°C)
- IAT SENSOR above 32°F (0°C)
- Vehicle speed is 0 mph (0 km/h)
- ST FUEL TRIM between 0.73-1.47
- FSS is CLOSED

13. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0506 indicated?

YES - Go to step 19.

NO - Go to step 14.

14. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 13, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, go to step 19. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, go to step 12.

15. Remove the air intake duct from the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).

16. Check for dirt, carbon, or damage in the throttle bore.

Is there dirt, carbon, or damage in the throttle bore?

YES - If there is dirt or carbon, clean the throttle body (see **THROTTLE BODY CLEANING**). Also check for damage to the air cleaner element (see **AIR CLEANER ELEMENT INSPECTION/REPLACEMENT**), then go to step 9. If there is damage in the throttle bore, go to step 8.

NO - Go to step 17.

17. Recheck with different load conditions (turn on the headlights, blower motor, rear window defogger and/or A/C, change the gear position, etc.).

18. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Intermittent failure, the system is OK at this time.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Idle Control System - MDX

NO - If the screen indicates FAILED, check the A/C system and/or power steering system, then go to step 1 and recheck. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, go to step 17 and recheck.

19. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
20. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
21. Check under these DATA LIST parameter conditions with the HDS:
 - ECT SENSOR 1 above 158°F (70°C)
 - IAT SENSOR above 32°F (0°C)
 - Vehicle speed is 0 mph (0 km/h)
 - ST FUEL TRIM between 0.73-1.47
 - FSS is CLOSED
22. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0506 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 20. If the PCM was substituted, go to step 1.

NO - Go to step 23.

23. Monitor the OBD STATUS for DTC P0506 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 22, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 20. If the PCM was substituted, go to step 1. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, go to step 20.

DTC P0507: IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Idle Control System - MDX

2. Clear the DTC with the HDS.
3. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
4. Monitor the OBD STATUS for DTC P0507 in the DTCs MENU with the HDS.

Does the screen indicate FAILED?

YES - Go to step 5.

NO - If the screen indicates PASSED, intermittent failure, the system is OK at this time. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, recheck with different load conditions (electrical, A/C, gear position, etc.), then go to step 3.

5. Check for vacuum leaks at these parts:
 - PCV valve
 - PCV hose
 - EVAP canister purge valve
 - Throttle body
 - Intake manifold
 - Brake booster hose
 - Brake booster

Are there any leaks?

YES - Repair or replace the leaking part(s), then go to step 6.

NO - Go to step 6.

6. Turn the ignition switch ON (II).
7. Reset the PCM with the HDS.
8. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
9. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
10. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0507 indicated?

YES - Go to step 12.

NO - Go to step 11.

11. Monitor the OBD STATUS for DTC P0507 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 10, go to the indicated **DTCs TROUBLESHOOTING**.

NO - If the screen indicates FAILED, go to step 12. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, go to step 9.

12. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
13. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle 20 seconds.
14. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P0507 indicated?

YES - Check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 13. If the PCM was substituted, go to step 1.

NO - Go to step 15.

15. Monitor the OBD STATUS for DTC P0507 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 14, go to the indicated **DTCs troubleshooting**.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the throttle body and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 13. If the PCM was substituted, go to step 1. If the screen indicates EXECUTING, keep idling until a result comes on. If the screen indicates OUT OF CONDITION, go to step 13.

A/C SIGNAL CIRCUIT TROUBLESHOOTING

1. Start the engine.
2. Turn the blower switch on.
3. Turn the A/C switch on.
4. Check the A/C CLUTCH in the DATA LIST with the HDS.

Does it indicate ON?

YES - Go to step 5.

NO - Do the A/C pressure switch circuit troubleshooting (see **DTC B2979 OR DTC INDICATOR B AND WINDSHIELD DEFROST: AN OPEN IN THE A/C PRESSURE SENSOR CIRCUIT**).

5. Check the A/C system.

Does the A/C system operate ?

YES - The air conditioning system circuit is OK.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Turn the ignition switch to ON (II).
8. Activate the A/C CLUTCH in the INSPECTION MENU with the HDS.

Is there a clicking noise from the A/C compressor clutch?

YES - Do the A/C system test (see **A/C SYSTEM TEST**).

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Jump the SCS line with the HDS.
11. Disconnect PCM connector A (49P).
12. Turn the ignition switch ON (II).
13. Momentarily connect PCM connector terminal A13 to body ground with a jumper wire several times.

Fig. 2: Identifying PCM Connector Terminal A13 To Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there a clicking noise from the A/C compressor clutch?

YES - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes

away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

NO - Check for poor connections or loose terminals at the A/C compressor clutch relay and the PCM. If the connections are OK, check the A/C compressor clutch relay (see **POWER RELAY TEST**). Then repair open in the wire between the PCM (A13) and the A/C compressor clutch relay and the other A/C systems.

ALTERNATOR FR SIGNAL CIRCUIT TROUBLESHOOTING

1. Start the engine, and let it idle.
2. Monitor the ALTERNATOR in the DATA LIST with the HDS.
3. Check if the indicated percentage varies when the headlight switch is turned on.

Does the percentage vary?

YES - The alternator signal circuit is OK.

NO - Go to step 4.

4. Turn the headlight switch and ignition switch to LOCK (0).
5. Jump the SCS line with the HDS.
6. Disconnect the alternator 4P connector.
7. Disconnect PCM connector C (49P).
8. Check for continuity between body ground and PCM connector terminal C44.

Fig. 3: Identifying Continuity Between Body Ground And PCM Connector Terminal C44
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C44) and the alternator.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a

known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

PSP SWITCH SIGNAL CIRCUIT TROUBLESHOOTING

1. Start the engine, and let it idle.
2. Align the steering wheel straight ahead.
3. Check the PSP SWITCH in the DATA LIST with the HDS.

Does it indicate ON?

YES - Go to step 4.

NO - Go to step 14.

4. Turn the steering wheel to the full lock position.
5. Check the PSP SWITCH in the DATA LIST with the HDS.

Does it change to OFF?

YES - The PSP switch signal circuit is OK.

NO - Go to step 6.

6. Turn the ignition switch to LOCK (0).
7. Disconnect the PSP switch 2P connector.
8. Start the engine.
9. Check the PSP SWITCH in the DATA LIST with the HDS.

Does it change to OFF?

YES - Replace the PSP switch.

NO - Go to step 10.

10. Turn the ignition switch OFF.
11. Jump the SCS line with the HDS.
12. Disconnect PCM connector A (49P).
13. Check for continuity between PSP switch 2P connector terminal No. 1 and body ground.

PSP SWITCH 2P CONNECTOR

Wire side of female terminals

Fig. 4: Identifying Continuity Between PSP Switch 2P Connector Terminal No. 1 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A38) and the PSP switch.

NO - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

14. Turn the ignition switch to LOCK (0).
15. Disconnect the PSP switch 2P connector.
16. Connect PSP switch 2P connector terminals No. 1 and No. 2 with a jumper wire, then start the engine.

PSP SWITCH 2P CONNECTOR

Wire side of female terminals

Fig. 5: Identifying PSP Switch 2P Connector Terminals No. 1 And No. 2 With Jumper Wire

Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Check the PSP SWITCH in the DATA LIST with the HDS.

Does it change to ON?

YES - Replace the PSP switch (see **POWER STEERING HOSE, LINE, AND PRESSURE SWITCH REPLACEMENT**).

NO - Go to step 18.

18. Turn the ignition switch to LOCK (0).
19. Remove the jumper wire from the PSP switch 2P connector.
20. Jump the SCS line with the HDS.
21. Disconnect PCM connector A (49P).
22. Check for continuity between PCM connector terminal A38 and PSP switch 2P connector terminal No. 1.

Fig. 6: Identifying Continuity Between PCM Connector Terminal A38 And PSP Switch 2P Connector Terminal No. 1

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 23.

NO - Repair open in the wire between the PSP switch and the PCM (A38).

23. Check for continuity between PSP switch 2P connector terminal No. 2 and body ground.

Fig. 7: Identifying Continuity Between PSP Switch 2P Connector Terminal No. 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the symptom/indication goes away with a known-good PCM, replace the original PCM (see **PCM REPLACEMENT**).

NO - Repair open in the wire between the PSP switch and G202.

BRAKE PEDAL POSITION SWITCH SIGNAL CIRCUIT TROUBLESHOOTING

1. Turn the ignition switch ON (II).
2. Check the BRAKE SWITCH in the DATA LIST with the HDS.

Does it indicate OFF?

YES - Go to step 3.

NO - Inspect the brake pedal position switch (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

3. Press the brake pedal, and check the BRAKE SWITCH in the DATA LIST with the HDS.

Does it change to ON?

YES - The brake pedal position switch signal circuit (BKSW line) is OK.

NO - Go to step 4.

4. Turn the ignition switch to LOCK (0).
5. Jump the SCS line with the HDS.
6. Disconnect the brake pedal position switch 4P connector.
7. Disconnect PCM connector A (49P).
8. Check for continuity between PCM connector terminal A8 and body ground.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Idle Control System - MDX

Fig. 8: Identifying Continuity Between PCM Connector Terminal A8 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (A8) and the No. 11+B STOP & HORN (15 A) fuse.
Replace the No. 11 +B STOP & HORN (15 A) fuse.

NO - Go to step 9.

9. Connect brake pedal position switch 4P connector terminal No. 2 to body ground with a jumper wire.

Fig. 9: Identifying Brake Pedal Position Switch 4P Connector Terminal No. 2 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check for continuity between PCM connector terminal A8 and body ground.

Fig. 10: Identifying Continuity Between PCM Connector Terminal A8 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair open in the wire between the brake pedal position switch and the No. 11 +B STOP & HORN (15 A) fuse. Inspect the brake pedal position switch (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

NO - Repair open in the wire between the PCM (A8) and the brake pedal position switch.

IDLE SPEED INSPECTION

NOTE:

- Before checking the idle speed, check these items:
 - The malfunction indicator lamp (MIL) has not been reported on, and there are no DTCs.
 - Ignition timing
 - Sparkplugs
 - Air cleaner
 - PCV system
- Apply the parking brake and make sure the headlights are off.

1. Disconnect the evaporative emission (EVAP) canister purge valve connector.
2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 11: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Turn the ignition switch ON (II).
4. Make sure the HDS communicates with the PCM. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
6. Check the idle speed without load conditions: headlights, blower fan, radiator fan, and air conditioner off.

Idle speed should be: 710 ± 50 rpm (in Park or neutral)

7. Let the engine idle for 1 minute with high electric load (A/C switch ON, temperature set to max cool, blower fan on high, and headlights on high beam).

Idle speed should be: 710 ± 50 rpm (in Park or neutral)

NOTE: If the idle speed is not within specification, do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**). If the idle speed is still not within specification, go to symptom troubleshooting.

8. Reconnect the EVAP canister purge valve connector.

PCM IDLE LEARN PROCEDURE

The idle learn procedure must be done so the PCM can learn the engine idle characteristics.

Do the idle learn procedure whenever you do any of these actions:

- Replace the PCM.
- Reset the PCM.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Idle Control System - MDX

- Update the PCM.
- Replace or clean the throttle body.
- When the engine or transmission is disassembled.

NOTE: **Clearing the DTCs with the HDS does not require you to do the idle learn procedure.**

PROCEDURE

1. Make sure all electrical items (A/C, audio, lights, etc.) are off.
2. Reset the PCM with the HDS.
3. Turn the ignition switch ON (II), and wait 2 seconds.
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, or until the engine coolant temperature reaches 194°F (90°C).
5. Let the engine idle for about 5 minutes with the throttle fully closed.

NOTE: **If the radiator fan comes on, do not include its running time in the 5 minutes.**

6. Verify on the HDS data list that the idle learn procedure is complete.

2007-09 ACCESSORIES AND EQUIPMENT

Ignition Switch-MDX

TEST

SRS components are located in the area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before performing repairs or servicing.

1. Do the battery terminal disconnection procedure (See **DISCONNECTION**).
2. Remove the steering column covers (see **COLUMN COVER REMOVAL/INSTALLATION**).
3. Disconnect the 7P connector (A) from the ignition switch (B).

Fig. 1: Identifying 7P Connector And Ignition Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity between the terminals in each switch position according to the table.

Terminal Position	RED (ACC)	WHT (BAT)	PNK (IG1)	ORN (IG2)	YEL (ST)
O (LOCK)					
I (ACC)	○	○			
II (ON)	○	○	○	○	
III (START)		○	○	○	○

Fig. 2: Switch Position Terminals Continuity Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the continuity does not agree with the table, replace the ignition switch (see **REPLACEMENT**).
6. Do the battery terminal reconnection procedure (See **RECONNECTION**).

REPLACEMENT

SRS components are located in the area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before performing repairs or servicing.

1. Do the battery terminal disconnection procedure(See **DISCONNECTION** .
2. Remove the steering column covers (see **COLUMN COVER REMOVAL/INSTALLATION**).
3. Disconnect the 7P connector (A) from the ignition switch (B).

Fig. 3: Identifying 7P Connector And Ignition Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the two screws and the ignition switch.
5. Install the parts in the reverse order of removal.
6. Do the battery terminal reconnection procedure (See **RECONNECTION**).

CIRCUIT DIAGRAM

2008 Acura MDX

2007-09 ENGINE Ignition System - MDX

Fig. 2: Ignition System - Circuit Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

IGNITION TIMING INSPECTION

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch to ON (II).

3. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). If it doesn't communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs. If a DTC is present, diagnose and repair the cause before inspecting the ignition timing.
5. Start the engine. Hold the engine at 3,000 rpm with no load (in P or N position) until the radiator fan comes on, then let it idle.
6. Check the idle speed (see **IDLE SPEED INSPECTION**).
7. Jump the SCS line with the HDS.
8. Connect the timing light to the service loop.

Fig. 3: Identifying Timing Light To Service Loop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Aim the light toward the pointer (A) on the timing belt cover. Check the ignition timing under a no load condition (headlights, blower fan, rear window defogger, and air conditioner are turned off).

Ignition Timing:

10° ± 2° BTDC (RED mark (B)) at idle in P or N position

Fig. 4: Identifying Ignition Timing Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. If the ignition timing differs from the specification, check the cam timing. If the cam timing is OK, update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the ignition system works properly, replace the original PCM (see **PCM REPLACEMENT**).
11. Disconnect the HDS and the timing light.

IGNITION COIL REMOVAL/INSTALLATION

1. Remove the engine cover (A).

Fig. 5: Identifying Engine Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the ignition coil connector (A), then remove the ignition coils (B).

Fig. 6: Identifying Ignition Coil Connector And Ignition Coils With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ignition coils in the reverse order of removal.

IGNITION COIL RELAY CIRCUIT TROUBLESHOOTING

1. Check the No. 8 (15 A) fuse and No. 9 (15 A) fuse in the under-hood fuse/relay box.

Are the fuses OK?

YES - Go to step 2.

NO - Replace the fuse. If the fuse continues to blow, locate and repair the short in the circuit between the under-hood fuse/relay box and the ignition coils.

2. Remove the relay control module from the under-hood fuse/relay box, and test it (see **RELAY CONTROL MODULE TEST**).

Is the relay OK?

YES - Go to step 3.

NO - Replace the relay control module in the under-hood fuse/relay box.

3. Measure the voltage between the relay control module connector C terminal No. 2 and body ground.

RELAY CONTROL MODULE 2P CONNECTOR C

Wire side of female terminals

Fig. 7: Identifying Voltage Between Relay Control Module Connector C Terminal No. 2 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 4.

NO - Repair open in the wire between relay control module connector C terminal No. 2 and the main under-hood fuse box.

4. Check for continuity between the relay control module connector H terminal No. 6 and No. 1 ignition coil

3P connector terminal No. 3.

Fig. 8: Identifying Continuity Between Relay Control Module Connector H And Ignition Coil 3P Connector Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 5.

NO - Repair open in the wire between the relay control module connector H terminal No. 6 and ignition coil 3P connector terminal No. 3.

5. Check for continuity between the relay control module connector E terminal No. 5 and body ground.

Fig. 9: Identifying Continuity Between Relay Control Module Connector E Terminal No. 5 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to body ground in the wire between the relay control module connector E terminal No. 5 and the powertrain control module (PCM) (A6).

NO - Go to step 6.

6. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (see step 2 on **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
7. Turn the ignition switch to ON (II).
8. Make sure the HDS communicates with the vehicle and the PCM. If it doesn't communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
9. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0).

NOTE: This step must be done to protect the PCM from damage.

10. Disconnect PCM connector A (49P).
11. Check for continuity between relay control module connector E terminal No. 5 and PCM connector terminal A6.

Fig. 10: Identifying Continuity Between Relay Control Module Connector E Terminal No. 5 And PCM Connector Terminal A6

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - The system is OK at this time. Check for loose or poor connections at the relay control module connector E and the PCM (A6).

NO - Repair open in the wire between the relay control module connector E terminal No. 5 and the PCM (A6).

SPARK PLUG INSPECTION

1. Remove the spark plugs and inspect the electrodes and the ceramic insulator.
 - Burned or worn electrodes may be caused by:
 - Advanced ignition timing
 - Loose spark plug

- Plug heat range too hot
- Insufficient cooling
- Fouled plugs may be caused by:
 - Retarded ignition timing
 - Oil in combustion chamber
 - Incorrect spark plug gap
 - Plug heat range too cold
 - Excessive idling/low speed running
 - Clogged air cleaner element
 - Deteriorated ignition coils

Fig. 11: Identifying Spark Plug Gap

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the spark plug electrode is dirty or contaminated, clean the electrode with a plug cleaner.

NOTE:

- Do not use a wire brush or scrape the iridium electrode since this will damage the electrode.
- When using a sand blaster spark plug cleaner, do not clean for more than 20 seconds to avoid damaging the electrode.

3. Do not adjust the gap (A) of iridium tip plugs; replace the spark plug if the gap is out of specification.

Electrode Gap

Standard (New): 1.0-1.1 mm (0.039-0.043 in.)

Fig. 12: Identifying Electrode Gap

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Replace the plug at the specified interval, or when the center electrode is rounded (A). Use only the listed spark plugs.

Spark Plugs

NGK: IZFR6K11

DENSO: SKJ20DR-M11

Fig. 13: Identifying Center Electrode

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Apply a small amount of anti-seize compound to the plug threads, and screw the plugs into the cylinder head, finger-tight. Torque them to 18 N.m (1.8 kgf.m, 13 lbf.ft).

2007-09 ACCESSORIES AND EQUIPMENT

Immobilizer System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Immobilizer System Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM DESCRIPTION

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX

The vehicle is equipped with an immobilizer system that will disable the vehicle unless a programmed ignition key is used.

This system consists of a transponder, a keyless transmitter, immobilizer-keyless control unit, immobilizer indicator, imoes unit (built into the MICU), and the PCM.

When the immobilizer key (programmed by the HDS) is inserted into the ignition switch and turned to the ON (II) position, the immobilizer-keyless control unit sends power to the transponder in the ignition key. The transponder then sends a coded signal back to the immobilizer-keyless control unit which then sends a coded signal to the imoes unit, which confirms the code and signals the PCM to continue to supply power to the fuel pump circuit.

Fig. 2: Identifying Immobilizer System Description
Courtesy of AMERICAN HONDA MOTOR CO., INC.

If the wrong key has been used or the code was not received or recognized by the unit, the vehicle will not start, then shut off, and the indicator will quickly flash once, then it will blink until the ignition switch is turned to LOCK (0). When the ignition switch is turned to LOCK (0), the indicator will blink ten times to signal that the unit has reset correctly, then the indicator will go off.

CIRCUIT DIAGRAM

2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX

DTC B1905: IMMOBILIZER-KEYLESS CONTROL UNIT LOST COMMUNICATION WITH

DRIVER'S MPCS UNIT (DRLOCKSW MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1905 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the immobilizer-keyless control unit and the driver's MPCS unit.

5. Check for DTCs with the HDS.

Are DTCs B1013, B1065, B1182, and/or B1356 also indicated?

YES - Do the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**).

NO - Do the immobilizer-keyless control unit input test (see **IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST**).

DTC B1906: IMMOBILIZER-KEYLESS CONTROL UNIT LOST COMMUNICATION WITH GAUGE CONTROL MODULE (A/T MESSAGE)

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.
4. Check for DTCs with the HDS.

Is DTC B1906 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the immobilizer-keyless control unit and the gauge control module.

5. Check for DTCs with the HDS.

Are DTCs B1061, B1359, B1808, and B1956 also indicated?

YES - Do the gauge control module input test (see **GAUGE CONTROL MODULE INPUT TEST**).

NO - Do the immobilizer-keyless control unit input test (see **IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST**).

SYMPTOM TROUBLESHOOTING INFORMATION

GENERAL CHECK BEFORE TROUBLESHOOTING

Before troubleshooting the immobilizer system, check the following general items to minimize troubleshooting time:

- If the battery is low; fully charge the battery, then troubleshoot the immobilizer system.
- The ignition key is not a genuine Acura part; use the Acura-approved key blank, register the key, then troubleshoot the immobilizer system.
- Check to see if a key ring, or a key case is used; remove the immobilizer key from it, and troubleshoot the immobilizer system with the immobilizer key only.
- Check to see if an aftermarket electrical part is attached; remove it, then troubleshoot the immobilizer system.

SYMPTOM TROUBLESHOOTING USING THE IMMOBILIZER INDICATOR LIGHTING PATTERN

The blinking pattern of the immobilizer indicator light can help troubleshoot the condition of the immobilizer system. Following are descriptions of the four possible patterns.

Normal operation

If the immobilizer code is identified, the immobilizer indicator comes on for a maximum of 2 seconds, then goes off after turning the ignition switch ON (II).

The immobilizer indicator does not come on when the ignition switch is turned to LOCK (0).

Immobilizer code is not identified

If the immobilizer code is not identified, the immobilizer indicator comes on for a maximum of 2 seconds, then blinks after turning the ignition switch ON (II). The immobilizer indicator blinks ten times, then goes off when the ignition switch is turned to LOCK (0).

The state of the immobilizer key registration and the IM OCD (S-NET) line can be checked by doing a **SYSTEM CHECK** with the HDS (see **SYSTEM CHECK**).

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX

Immobilizer indicator does not come on

If the immobilizer indicator does not come on after turning the ignition switch ON (II), an open or short in the F-CAN lines between the PCM and the gauge control module. Watch the malfunction indicator lamp (MIL). If the MIL stays on, go to the PGM-FI system troubleshooting (see **GENERAL TROUBLESHOOTING INFORMATION**).

Immobilizer indicator does not go off

If the immobilizer indicator does not go off after turning the ignition switch ON (II), do the gauge control module self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**). If the indicator drive circuit is OK, do the SYSTEM CHECK with the HDS.

SYMPTOM TROUBLESHOOTING USING MALFUNCTIONING CIRCUIT FUNCTIONS

If a malfunction occurs in the immobilizer circuit, use the table to cross-reference the malfunctioning function to the line(s) that should be checked table:

Function		Immobilizer Indicator	Engine Start	Key Registration	Tester Communication	Keyless Operation
Line Error	Cause of Malfunction					
Terminal No.						
1	VBU line open or short	Comes on, then goes off.	Possible	Impossible	Possible	Impossible
2	IG1 line open or short	Blinking	Impossible	Impossible	Impossible	Possible
3	IM OCD (S-NET) line open or short	Blinking	Impossible	Impossible	Impossible	Possible
4	B-CAN line open or short	Comes on, then goes off.	Possible	Impossible	Immobilizer: Possible Keyless: Impossible	Impossible
5	K-LINE line open or short	Comes on, then goes off.	Possible	Impossible	Impossible	Possible
6	KEYSW line open	Comes on, then goes off.	Possible	Possible	Possible	Possible (in spite of the key is in the ignition switch)
	KEYSW line short to ground					Impossible (panic only works with ignition switch OFF)
7	GND (LG) line open	Blinking	Impossible	Impossible	Impossible	Impossible

Fig. 4: Symptom Troubleshooting Chart

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM CHECK AND STATUS LOG

NOTE: The HDS can be used to:

- Check the state of the immobilizer key registration and the IM OCD (S-NET) line by doing a SYSTEM CHECK.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX

- **Check the number of times the immobilizer control unit-receiver doesn't permit the engine to run by checking the STATUS LOG. Troubleshoot the line with the highest count first.**

1. Connect the HDS to the data link connector, then turn the ignition switch ON (II) and follow the prompts to the MAIN MENU.

NOTE: If the HDS does not communicate with the vehicle, go to the DLC circuit troubleshooting (see DLC CIRCUIT TROUBLESHOOTING).

2. At the MAIN MENU, enter IMMOBILIZER, then select the IMMOBILIZER SETUP.
3. Do the SYSTEM CHECK. If there is a system check number, do the troubleshooting for the item indicated.
4. Check the status log using the HDS. Troubleshoot the line with the highest counts. If all the lines are "0" zero, the problem may not be caused by the immobilizer system, check for ignition or fuel problems.

NOTE: Once repaired, clear the status log by removing the No. 7 (10 A) fuse in the under-dash fuse box or disconnecting the immobilizer control unit-receiver.

SYMPTOM TROUBLESHOOTING INDEX

1. Troubleshoot the immobilizer system by the order of the priority shown:

SYMPTOM TROUBLESHOOTING INDEX

Order of Priority	Symptom	Possible cause
1	Immobilizer indicator blinks after the ignition switch is turned to LOCK (0).	Symptom troubleshooting (see Symptom Troubleshooting <u>IMMOBILIZER INDICATOR BLINKS</u>).
2	Engine does not start with the programmed immobilizer key.	Symptom troubleshooting (see <u>ENGINE DOES NOT START WITH THE IMMOBILIZER KEY</u>).
3	Immobilizer indicator does not come on.	Check the MIL indication. • If the MIL comes on, go to the PGM-FI System MIL circuit troubleshooting (see <u>MIL CIRCUIT TROUBLESHOOTING</u>). • If the MIL does not come on, replace the gauge control module.
4	Immobilizer indicator does not go off.	Symptom troubleshooting (see <u>IMMOBILIZER INDICATOR DOES NOT GO OFF</u>).

SYSTEM CHECK

2008 Acura MDX**2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX**

1. Connect the HDS to the data link connector.
2. Turn the ignition switch ON (II).
3. Monitor the System Check in the Immobilizer Info with the HDS.
4. If the HDS displays the "Immobilizer system is normal", the immobilizer system is OK. If the HDS displays any other messages, check as follows:

SYSTEM CHECK CHART

Status Log No.	System Check	Possible Failures
A-1	Immobilizer system is not normal	• This key is not registered in the immobilizer-keyless control unit. Try to register keys by using "KEYS". • The communication was not good between the antenna and the immobilizer key by influence of metal such as key chains. • The communication was not good between the antenna and the immobilizer key by battery voltage low.
A-2	Immobilizer system is not normal	• Intermittent interruption between transponder and immobilizer-keyless control unit. • The immobilizer key type is different. It is not for this vehicle but for another one or for other company's one. • Key failure (transponder failure) • The communication was not good between the antenna and the immobilizer key by influence of metal such as key chains. • The communication was not good between the antenna and the immobilizer key by battery voltage low.
A-3	Immobilizer system is not normal	• The ignition switch was turned ON (II) with a non-immobilizer key. • The immobilizer key type is different. It is not for this vehicle but for another one or for other company's one. • Key failure (transponder failure) • The communication was not good between the antenna and the immobilizer key by influence of metal such as key chains. • The communication was not good between the antenna and the immobilizer key by battery voltage low. • Immobilizer-keyless control unit failure
B-1	Immobilizer system is not normal	• The PCM was not registered. Try to register the PCM by using "REPLACE PCM". • The communication was not good between the PCM and the immobilizer-keyless control unit by battery voltage low. • The communication was not good between the immobilizer-keyless control unit and the PCM by influence of some noise.

2008 Acura MDX**2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX**

B-2	Immobilizer system is not normal	• The PCM was not registered. Try to register the PCM by using "REPLACE PCM". • The communication was not good between the PCM and the immobilizer-keyless control unit by battery voltage low. • The communication was not good between the immobilizer-keyless control unit and the PCM by influence of some noise.
D-1	Immobilizer system is not normal	• Harness short from the PCM to the immobilizer-keyless control unit. (IMOCD/S-NET line short) • The communication was not good between the PCM and the immobilizer-keyless control unit by battery voltage low. • The communication was not good between the immobilizer-keyless control unit and the PCM by influence of some noise. • Immobilizer-keyless control unit failure • PCM failure
D-2	Immobilizer system is not normal	• Blown fuse • Harness open from the immobilizer control unit-receiver and the imoes unit. • The communication was not good between the immobilizer control unit-receiver and the imoes unit by influence of some noise.
D-3	Immobilizer system is not normal	• Blown fuse • Harness open from the PCM to the immobilizer-keyless control unit. • The communication was not good between the PCM and the immobilizer-keyless control unit by battery voltage low. • The communication was not good between the immobilizer-keyless control unit and the PCM by influence of some noise. • Immobilizer-keyless control unit failure • PCM failure

STATUS LOG

If you suspect there is a immobilizer system problem, check the status log.

1. Connect the HDS to the data link connector.
2. Turn the ignition switch ON (II).
3. On the HDS screen, select Honda systems, select immobilizer set-up, select immobilizer information, then select status log.
4. Check the Status log count. Troubleshoot the status with the highest count first. If no counts are listed, the immobilizer system is OK. Continue with normal symptom troubleshooting.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX

STATUS LOG CHART

Status Log No.	Detected Item	Probable Cause
A-1	KEY CODE MISMATCH (Code format normal, but code data is mismatch)	1. The key was not registered 2. Interference from metal such as key chains 3. Low battery voltage
A-2	KEY CODE MISMATCH (Code format failure)	1. Ignition switch was turned ON (II) with another type of immobilizer key or aftermarket key 2. Interference from metal such as key chains 3. Low battery voltage
A-3	KEY CODE MISMATCH (No key code or non-immobilizer key)	1. Ignition switch was turned ON (II) with another type of immobilizer key or aftermarket key 2. Interference from metal such as key chains 3. Low battery voltage 4. Key failure 5. Immobilizer-keyless control unit failure
B-1	PCM CODE MISMATCH (Code format normal, but code data is mismatch)	1. PCM was not registered correctly 2. Low battery voltage 3. Poor or loose terminal connections at the immobilizer-keyless control unit 4. Communication line electrical noise
B-2	PCM MISMATCH (Code format failure)	1. PCM was not registered correctly 2. Low battery voltage 3. Poor or loose terminal connections at the immobilizer-keyless control unit 4. Communication line electrical noise
D-1	IM OCD/S-NET LINE PROBLEM (Short to ground)	1. Low battery voltage 2. Poor or loose terminal connections at the immobilizer-keyless control unit and the PCM 3. Communication line electrical noise
	IM OCD/S-NET LINE PROBLEM (Open	1. Open or short in the harness from the PCM to the immobilizer-keyless control unit

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX

D-3	line or PCM/immobilizer control unit-receiver failure)	2. Low battery voltage 3. Poor or loose terminal connections at the immobilizer-keyless control unit and the PCM 4. Communication line electrical noise
-----	--	---

SYMPTOM TROUBLESHOOTING

IMMOBILIZER INDICATOR BLINKS

NOTE: Before troubleshooting, check the items listed in "General Check before Troubleshooting".

1. Turn the ignition switch to LOCK (0).
2. Connect the HDS, then turn the ignition switch ON (II).
3. Enter the IMMOBILIZER, then select the IMMOBILIZER SETUP.
4. Check the SYSTEM CHECK and STATUS LOG information.

Is the SYSTEM CHECK indicated?

YES - Troubleshoot the immobilizer system according to the result of the SYSTEM CHECK/ STATUS LOG (see SYSTEM CHECK).

NO - Go to step 5.

5. Turn the ignition switch to LOCK (0).
6. Enter the vehicle, and remove the ignition key from the ignition switch, then close the all doors.
7. Operate the keyless transmitter LOCK and UNLOCK several times in the vehicle.

Do the door lock actuators work normally?

YES - Go to step 8.

NO - Check for a poor ground (G101) and/or an open in the wire between the immobilizer-keyless control unit 7P connector No. 7 terminal and PCM connector A (49P) No. 41 terminal.

8. Turn the ignition switch ON (II).
9. Measure the voltage between the immobilizer-keyless control unit 7P connector No. 2 terminal and body ground.

IMMOBILIZER-KEYLESS CONTROL UNIT 7P CONNECTOR

Wire side of female terminals

Fig. 5: Identifying Voltage Between Immobilizer-Keyless Control Unit 7P Connector No. 2 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 10.

NO - Check No. 19 (20 A) fuse in the under-dash fuse/relay box or for an open in the BRN wire between the under-dash fuse-relay box and the immobilizer-keyless control unit.

10. Measure the voltage between the immobilizer-keyless control unit 7P connector No. 7 terminal and body ground.

IMMOBILIZER-KEYLESS CONTROL UNIT 7P CONNECTOR

Wire side of female terminals

Fig. 6: Identifying Voltage Between Immobilizer-Keyless Control Unit 7P Connector No. 7 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.5 V?

YES - Replace the immobilizer-keyless control unit.

NO - Check for a poor ground (G101) and/or repair poor connection or open between the immobilizer-keyless control unit 7P connector No. 7 terminal and PCM connector A (49P) No. 41 terminal.

NOTE: Before troubleshooting, check the items listed in "General Check before Troubleshooting" and "How to Troubleshoot" (see GENERAL CHECK BEFORE TROUBLESHOOTING).

1. Try to start the engine.

Does the engine start?

YES - Intermittent failure, the vehicle is OK at this time. Check status log (see STATUS LOG).

NO - Go to step 2.

2. Turn the ignition switch to LOCK (0).
3. Turn the ignition switch ON (II), and check the immobilizer indicator indication.

Does the indicator quickly flash twice and turn off?

YES - Go to step 4.

NO - Do the immobilizer-keyless control unit input test (see IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST).

4. Turn the ignition switch to START (III).

Does the starter crank the engine?

YES - Go to step 5.

NO - Go to Starting System troubleshooting and check the starter motor circuit.

5. Try to start the engine with a different known-good immobilizer key (previously programmed and known to start the vehicle).

Does the engine start?

YES - Replace the immobilizer key.

NO - Go to the PGM-FI System Symptom Troubleshooting.

IMMOBILIZER INDICATOR DOES NOT GO OFF

1. Turn the ignition switch to LOCK (0).
2. Connect the HDS to the data link connector.
3. Turn the ignition switch ON (II).
4. Enter the IMMOBILIZER, then select the IMMOBILIZER INFORMATION.

5. Do the SYSTEM CHECK with the HDS.

Is N-1 OK indicated?

YES - Do the gauge control module self-test. If the gauge control module is faulty, replace it.

NO - Substitute a known-good immobilizer-keyless control unit, then register it and recheck. If the symptom goes away, replace the original immobilizer-keyless control unit.

IMMOBILIZER KEY REGISTRATION

NOTE:

- The HDS is required for registration of the immobilizer keys.
- Check for aftermarket electrical equipment that can cause problems with transponder operation.
- The immobilizer-keyless control unit can store up to six immobilizer Keys.

ADD ONE NEW KEY

1. Have a registered key, a new immobilizer key, and the first password from the iN system.
2. Connect the HDS to the data link connector.
3. Turn the ignition switch ON (II).
4. Select "IMMOBILIZER" from the "SYSTEM SELECT" menu.
5. Select "Add and Delete Keys", then "Add 1 key".
6. Do the registration according to the instructions on the HDS screen.
7. Check if the engine can be started by the newly registered key. Check the keyless remote operation to make sure that it functions properly.

DELETE OR ADD MULTIPLE KEYS

NOTE:

- If any of the registered keys were lost, do the following procedure to delete the lost registered key.
- When deleting keys, it is necessary to delete all stored remote transmitters. Refer to the keyless transmitter programming to delete and reprogram the remote (see TRANSMITTER TEST/REPLACEMENT).

1. Have all registered keys, all new keys, and the first password.
2. Connect the HDS to the data link connector.
3. Turn the ignition switch ON (II).
4. Select "IMMOBILIZER" from the "SYSTEM SELECT" menu.
5. Select "Add and Delete Keys", or "Delete or Add Multiple Keys".
6. Do the registration according to the instruction of HDS screen.

7. Check if the engine can be started by all the registered keys.

ALL KEYS ARE LOST

NOTE: When deleting keys, it is necessary to delete all stored remote transmitters. Refer to the keyless transmitter programming to delete and reprogram the remote (see TRANSMITTER TEST/REPLACEMENT).

1. Prepare all new keys and have the immobilizer PCM code.
2. Connect the HDS to the data link connector.
3. Turn the ignition switch ON (II).
4. Select "IMMOBILIZER" from the "SYSTEM SELECT" menu.
5. Select "Add and Delete Keys", then "ALL KEYS LOST".
6. Do the registration according to the instruction of HDS screen.
7. Check if the engine can be started by all the registered keys.

IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST

NOTE: Before testing the immobilizer-keyless control unit, troubleshoot the multiplex integrated control unit first, using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A) and check the No. 19 (20 A) and No. 7 (10 A) fuses in the under-dash fuse/relay box.

1. Remove the steering column covers (see COLUMN COVER REMOVAL/INSTALLATION).
2. Disconnect the 7P connector (A) from the immobilizer-keyless control unit (B).

Fig. 7: Identifying 7P Connector And Immobilizer-Keyless Control Unit
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, go to step 4.
4. With the connector still disconnected, make these input tests at the connector.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 5.

IMMOBILIZER-KEYLESS CONTROL UNIT INPUT

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
			Check for continuity between the No. 3 terminal and the PCM connector A (49P) No. 46 terminal: There should be continuity.	An open in the

2	BRN (IG1)	Ignition switch ON (II)	There should be battery voltage.	box • An open in the wire
7	BRN (LG3)	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G101) • An open in the wire Faulty PCM
6	PNK (IG KEY SW)	Ignition key inserted into the ignition switch	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G601) • Faulty ignition key switch • An open in the wire

IMMOBILIZER-KEYLESS CONTROL UNIT REPLACEMENT

NOTE: All registered keys are necessary for replacement of the immobilizer-keyless control unit.

1. Remove the driver's dashboard lower cover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**).
2. Remove the steering column covers (see **COLUMN COVER REMOVAL/INSTALLATION**).
3. Disconnect the 7P connector (A) from the immobilizer-keyless control unit (B).

Fig. 8: Identifying 7P Connector And Immobilizer-Keyless Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the two screws and the immobilizer-keyless control unit from the ignition key cylinder.
5. Install the immobilizer-keyless control unit in the reverse order of removal.
6. After replacement, turn the ignition switch ON (II).
7. Connect the HDS to the data link connector.
8. Select "IMMOBI" from the "System Select" menu.
9. Select "Immobilizer Setup" from the "Mode Menu".

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Immobilizer System - MDX

10. Select "Replace Imm Unit".
11. Operate according to instructions of a screen of HDS.
12. After HDS operation, check the immobilizer system.
13. Verify the operation of every key and remote transmitter.

2007-09 ENGINE PERFORMANCE

Intake Air System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Intake Air System Component Location

Courtesy of AMERICAN HONDA MOTOR CO., INC.

DTC TROUBLESHOOTING

DTC P1077: IMT VALVE STUCK IN HIGH RPM POSITION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and then let it idle without load (in Park or neutral) until the radiator fan comes on.
4. Start the engine, and hold the engine speed above 3 800 rpm.

5. Check the IMT VALVE CMD in the DATA LIST with the HDS.

Is OPEN indicated?

YES - Go to step 6.

NO - Go to step 35.

6. Check the IMT VALVE SW in the DATA LIST with the HDS.

Is CLOSE indicated?

YES - Go to step 7.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the IMT actuator and the PCM.

7. Let the engine idle, then turn the ignition switch OFF.
8. Disconnect the IMT actuator 5P connector.
9. Turn the ignition switch ON (II).
10. Measure voltage between IMT actuator 5P connector terminal No. 1 and body ground.

IMT ACTUATOR 5P CONNECTOR

Wire side of female terminals

Fig. 2: Identifying Voltage Between IMT Actuator 5P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 11.

NO - Repair open in the wire between the PCM (C11) and the IMT actuator, then go to step 26.

11. Measure voltage between IMT actuator 5P connector terminal No. 3 and body ground.

IMT ACTUATOR 5P CONNECTOR

Wire side of female terminals

Fig. 3: Identifying Voltage Between IMT Actuator 5P Connector Terminal No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES - Go to step 12.

NO - Go to step 16.

12. Turn the ignition switch OFF.
13. Jump the SCS line with the HDS.
14. Disconnect PCM connector C (49P).
15. Check for continuity between PCM connector terminal C16 and IMT actuator 5P connector terminal No. 2.

IMT ACTUATOR 5P CONNECTOR

Wire side of female terminals

PCM CONNECTOR C (49P)

Terminal side of female terminals

Fig. 4: Identifying Continuity Between PCM Connector Terminal C16 And IMT Actuator 5P Connector Terminal No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 20.

NO - Repair open in the wire between the PCM (C16) and the IMT actuator, then go to step 26.

16. Turn the ignition switch OFF.
17. Jump the SCS line with the HDS.
18. Disconnect PCM connector B (49P).
19. Check for continuity between PCM connector terminal B19 and IMT actuator 5P connector terminal No. 3.

Fig. 5: Identifying Continuity Between PCM Connector Terminal B19 And IMT Actuator 5P Connector Terminal No. 3

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 34.

NO - Repair open in the wire between the PCM (B19) and the IMT actuator, then go to step 26.

20. Check for continuity between PCM connector terminal C48 and body ground.

Fig. 6: Identifying Continuity Between PCM Connector Terminal C48 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C48) and the IMT actuator, then go to step 26.

NO - Go to step 21.

21. Check for continuity between PCM connector terminal C48 and IMT actuator 5P connector terminal No. 5.

Fig. 7: Identifying Continuity Between PCM Connector Terminal C48 And IMT Actuator 5P Connector Terminal No. 5

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 22.

NO - Repair open in the wire between the PCM (C48) and the IMT actuator, then go to step 26.

22. Check for continuity between PCM connector terminal C49 and body ground.

Terminal side of female terminals

Fig. 8: Identifying Continuity Between PCM Connector Terminal C49 And Body Ground
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C49) and the IMT actuator, then go to step 26.

NO - Go to step 23.

23. Check for continuity between PCM connector terminal C49 and IMT actuator 5P connector terminal No. 4.

Fig. 9: Identifying Continuity Between PCM Connector Terminal C49 And IMT Actuator 5P Connector Terminal No. 4
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 24.

NO - Repair open in the wire between the PCM (C49) and the IMT actuator, then go to step 26.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Intake Air System - MDX

24. Remove the IMT actuator (see **IMT ACTUATOR REPLACEMENT**).
25. Move the IMT valve by hand.

Does it move smoothly?

YES - Substitute a known-good IMT actuator (see **IMT ACTUATOR REPLACEMENT**), then go to step 26 and recheck. If DTC P1078 is not indicated, replace the IMT actuator (see **IMT ACTUATOR REPLACEMENT**), then go to step 26. If DTC P1078 is indicated, go to step 35.

NO - Remove the engine cover (see step 1 on **INTAKE MANIFOLD REMOVAL AND INSTALLATION**), and repair the stuck valve. If necessary, replace the intake manifold (see **INTAKE MANIFOLD REMOVAL AND INSTALLATION**), then go to step 26.

26. Reconnect all connectors.
27. Turn the ignition switch ON (II).
28. Reset the PCM with the HDS.
29. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
30. Start the engine, and then let it idle without load (in Park or neutral) until the radiator fan comes on.
31. Start the engine, and hold the engine speed at 3,800 rpm for 10 seconds, then let it idle.
32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1077 indicated?

YES - Check for poor connections or loose terminals at the IMT actuator and the PCM, then go to step 1.

NO - Go to step 33.

33. Monitor the OBD STATUS for DTC P1077 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - Troubleshooting is complete. If any other Temporary DTCs or DTCs were indicated in step 32, go to .

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the IMT actuator and the PCM, then go to step 1. If the screen indicates NOT COMPLETED, go to step 31.

34. Reconnect all connectors.
35. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE PCM**).
36. Start the engine, and then let it idle without load (in Park or neutral) until the radiator fan comes on.
37. Start the engine, and hold the engine speed at 3,800 rpm for 10 seconds, then let it idle.
38. Check for Temporary DTCs or DTCs with the HDS.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Intake Air System - MDX

Is DTC P1077 indicated?

YES - Check for poor connections or loose terminals at the IMT actuator and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 37. If the PCM was substituted, go to step 1.

NO - Go to step 39.

39. Monitor the OBD STATUS for DTC P1077 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 38, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the IMT actuator and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then go to step 37. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, go to step 37.

DTC P1078: IMT VALVE STUCK IN LOW RPM POSITION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see **GENERAL TROUBLESHOOTING INFORMATION**).

1. Turn the ignition switch ON (II).
2. Clear the DTC with the HDS.
3. Start the engine, and let it idle.
4. Check the IMT VALVE CMD in the DATA LIST with the HDS.

Is CLOSE indicated?

YES - Go to step 5.

NO - Go to step 29.

5. Check the IMT VALVE SW in the DATA LIST with the HDS.

Is OPEN indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Check for poor connections or loose terminals at the IMT actuator and the PCM.

6. Turn the ignition switch OFF.
7. Disconnect the IMT actuator 5P connector.
8. Turn the ignition switch ON (II).
9. Check the IMT VALVE SW in the DATA LIST with the HDS.

Is CLOSE indicated?

YES - Go to step 14.

NO - Go to step 10.

10. Turn the ignition switch OFF.
11. Jump the SCS line with the HDS.
12. Disconnect PCM connector B (49P).
13. Check for continuity between PCM connector terminal B19 and body ground.

Fig. 10: Identifying Continuity Between PCM Connector Terminal B19 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (B19) and the IMT actuator, then go to step 23.

NO - Go to step 30.

14. Turn the ignition switch OFF.
15. Jump the SCS line with the HDS.
16. Disconnect PCM connector C (49P).
17. Check for continuity between PCM connector terminal C48 and body ground.

Terminal side of female terminals

Fig. 11: Identifying Continuity Between PCM Connector Terminal C48 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C48) and the IMT actuator, then go to step 23.

NO - Go to step 18.

18. Check for continuity between PCM connector terminal C48 and IMT actuator 5P connector terminal No. 5.

Wire side of female terminals

PCM CONNECTOR C (49P)

Terminal side of female terminals

Fig. 12: Identifying Continuity Between PCM Connector Terminal C48 And IMT Actuator 5P Connector Terminal No. 5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 19.

NO - Repair open in the wire between the PCM (C48) and the IMT actuator, then go to step 23.

19. Check for continuity between PCM connector terminal C49 and body ground.

Fig. 13: Identifying Continuity Between PCM Connector Terminal C49 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short in the wire between the PCM (C49) and the IMT actuator, then go to step 23.

NO - Go to step 20.

20. Check for continuity between PCM connector terminal C49 and IMT actuator 5P connector terminal No. 4.

Fig. 14: Identifying Continuity Between PCM Connector Terminal C49 And IMT Actuator 5P Connector Terminal No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

2008 Acura MDX

2007-09 ENGINE PERFORMANCE Intake Air System - MDX

NO - Repair open in the wire between the PCM (C49) and the IMT actuator, then go to step 23.

21. Remove the IMT actuator (see **IMT ACTUATOR REPLACEMENT**).
22. Move the IMT valve by hand.

Does it move smoothly?

YES - Substitute a known-good IMT actuator (see **IMT ACTUATOR REPLACEMENT**), then go to step 23 and recheck. If DTC P1077 is not indicated, replace the IMT actuator (see **IMT ACTUATOR REPLACEMENT**), then go to step 23. If DTC P1077 is indicated, go to step 31.

NO - Remove the engine cover (see step 1 on **INTAKE MANIFOLD REMOVAL AND INSTALLATION**), and repair the stuck valve. If necessary, replace the intake manifold (see **INTAKE MANIFOLD REMOVAL AND INSTALLATION**), then go to step 23.

23. Reconnect all connectors.
24. Turn the ignition switch ON (II).
25. Reset the PCM with the HDS.
26. Do the PCM idle learn procedure (see **PCM IDLE LEARN PROCEDURE**).
27. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1077 indicated?

YES - Check for poor connections or loose terminals at the IMT actuator and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 28.

28. Monitor the OBD STATUS for DTC P1078 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 27, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the IMT actuator and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

29. Turn the ignition switch OFF.
30. Reconnect all connectors.
31. Update the PCM if it does not have the latest software (see **PCM UPDATE**), or substitute a known-good

PCM (see **SUBSTITUTING THE PCM**).

32. Check for Temporary DTCs or DTCs with the HDS.

Is DTC P1078 indicated?

YES - Check for poor connections or loose terminals at the IMT actuator and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1.

NO - Go to step 33.

33. Monitor the OBD STATUS for DTC P1078 in the DTCs MENU with the HDS.

Does the screen indicate PASSED?

YES - If the PCM was updated, troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **PCM REPLACEMENT**). If any other Temporary DTCs or DTCs were indicated in step 32, go to the indicated DTCs troubleshooting.

NO - If the screen indicates FAILED, check for poor connections or loose terminals at the IMT actuator and the PCM. If the PCM was updated, substitute a known-good PCM (see **SUBSTITUTING THE PCM**), then recheck. If the PCM was substituted, go to step 1. If the screen indicates NOT COMPLETED, keep idling until a result comes on.

THROTTLE BODY TEST

CARBON ACCUMULATION CHECK

NOTE: If the malfunction indicator lamp (MIL) has been reported on, check for diagnostic trouble codes (DTCs).

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 15: Identifying Data Link Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the PCM. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Start the engine. Hold the engine speed at 3,000 rpm without load (in Park or neutral) until the radiator fan comes on, then let it idle.
5. Check the REL TP SENSOR in the DATA LIST with the HDS. The reading should be below 4.3 deg. If it is not, clean the throttle body (see **THROTTLE BODY CLEANING**).

THROTTLE POSITION LEARNING CHECK

NOTE: If the malfunction indicator lamp (MIL) has been reported on, check for diagnostic trouble codes (DTCs).

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

**Fig. 16: Identifying Data Link Connector**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch ON (II).
3. Make sure the HDS communicates with the PCM. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Select the INSPECTION MENU with the HDS.
5. Do the TP POSITION CHECK in the ETCS TEST. If needed, clean the throttle body (see **THROTTLE BODY CLEANING**).

THROTTLE BODY CLEANING

CAUTION: Do not insert your fingers into the installed throttle body when you turn

the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

1. Make sure the ignition switch is turned OFF.
2. Check for damage to the air cleaner. If the air cleaner is damaged, replace it (see **AIR CLEANER ELEMENT INSPECTION/ REPLACEMENT**).
3. Remove the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
4. Clean off the carbon from the throttle valve and inside the throttle body with a paper towel soaked in throttle plate and induction cleaner.

NOTE:

- Remove the throttle body to clean it.
- Be careful not to pinch your fingers.
- To avoid removing the molybdenum coating, do not clean the bearing area of the throttle shaft (A).
- Do not spray throttle plate and induction cleaner directly on the throttle body.
- Use Acura genuine throttle plate and induction cleaner.

Fig. 17: Identifying Throttle Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the throttle body (see **THROTTLE BODY REMOVAL/INSTALLATION**).
6. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

Fig. 18: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Turn the ignition switch ON (II).
8. Make sure the HDS communicates with the PCM. If it doesn't, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
9. Reset the PCM with the HDS.
10. Select the ETCS TEST in the INSPECTION MENU with the HDS.
11. Select the TP POSITION CHECK and clear the throttle position (TP) learned value.
12. Turn the ignition switch OFF.
13. Turn the ignition switch ON (II), and wait 2 seconds without pressing the accelerator pedal.

AIR CLEANER REMOVAL/INSTALLATION

1. Disconnect the MAF sensor/IAT sensor connector (A).

Fig. 19: Identifying Air Cleaner Remove / Install Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the bolts (B).
3. Remove the air cleaner (C).
4. Install the parts in the reverse order of removal.

AIR CLEANER ELEMENT INSPECTION/ REPLACEMENT

1. Open the air cleaner housing cover (A).

Fig. 20: Identifying Air Cleaner Housing Cover And Air Cleaner Element With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the air cleaner element (B) from the air cleaner housing (C).
3. Check the air cleaner element for damage or clogging. If there is damage or clogging, replace the air cleaner element.

NOTE: Do not use compressed air to clean the air cleaner element.

4. Clean and remove any debris from inside the air cleaner housing.
5. Install the parts in the reverse order of removal.
 - If you did not replace the air cleaner element, this procedure is complete.
 - If the maintenance minder required to the air cleaner element, reset the maintenance minder (See **RESETTING THE MAINTENANCE INFORMATION DISPLAY**).
 - If you replace the air cleaner element, reset the PCM with the HDS, and do the PCM idle learn procedure (See **PCM IDLE LEARN PROCEDURE**).

RESONATOR REMOVAL/INSTALLATION

1. Remove the air cleaner.
2. Do the battery terminal disconnection procedure. (See **DISCONNECTION**).
3. Remove the battery.
4. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
5. Remove the left side headlight (see **HEADLIGHT REPLACEMENT**).
6. Remove the clips (A) and cover (B).

Fig. 21: Identifying Resonator Remove / Install Components With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the bolts (C), and resonator (D).
8. Install the parts in the reverse order of removal.
9. Do the battery terminal reconnection procedure(See **RECONNECTION**
10. Adjust the headlight to local requirements (see **HEADLIGHT ADJUSTMENT**).

IMT ACTUATOR REPLACEMENT

1. Remove the engine cover (see step 1 **INTAKE MANIFOLD REMOVAL AND INSTALLATION**).
2. Disconnect the IMT actuator connector (A).

Fig. 22: Identifying IMT Actuator Connector And Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts (B) and the IMT actuator (C).
4. Install the parts in the reverse order of removal with a new O-ring (D).

THROTTLE BODY REMOVAL/INSTALLATION

CAUTION: Do not insert your fingers into the installed throttle body when you turn the ignition switch ON (II) or while the ignition switch is ON (II). If you do, you will seriously injure your fingers if the throttle valve is activated.

NOTE: If you are replacing the throttle body, begin at step 1. If you are removing the throttle body temporarily, begin at step 5.

1. Connect the HDS while the engine is stopped.
2. Select the INSPECTION MENU with the HDS.

3. Do the TP POSITION CHECK in the ETCS TEST.
4. Turn the ignition switch OFF.
5. Disconnect the MAP sensor connector (A).

Fig. 23: Identifying Throttle Body Remove / Install Components With Torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the intake air duct (B).
7. Disconnect the throttle body connector (C).
8. Disconnect and plug the water bypass hoses (D).
9. Remove the throttle body (E).
10. Install the parts in the reverse order of removal with a new gasket (F).

NOTE:

- Do the PCM idle learn procedure after the throttle body has been replaced (see PCM IDLE LEARN PROCEDURE).
- Refill the radiator with engine coolant (see COOLANT CHECK).

2007-09 ENGINE

Intake Manifold and Exhaust System - MDX

INTAKE MANIFOLD REMOVAL AND INSTALLATION

EXPLODED VIEW

Fig. 1: Exploded View Of Intake Manifold Removal And Installation With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REMOVAL

1. Remove the engine cover.

Fig. 2: Identifying Engine Cover

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the breather pipe +(A), then remove the intake air duct (B).

Fig. 3: Identifying Breather Pipe And Intake Air Duct

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the positive crankcase ventilation (PCV) hose (A), brake booster vacuum hose (B), vacuum hose (C), and intake manifold tuning (IMT) actuator connector (D).

Fig. 4: Identifying PCV Hose, Brake Booster Vacuum Hose, Vacuum Hose, And Intake Manifold Tuning (IMT) Actuator Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the evaporative emission (EVAP) canister hose (A), EVAP canister purge valve connector (B), throttle actuator connector (C), and manifold absolute pressure (MAP) sensor connector (D).

Fig. 5: Identifying EVAP Canister Hose, EVAP Canister Purge Valve Connector, Throttle Actuator Connector, And MAP Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect and plug the water bypass hoses (E).
6. Remove the upper cover mounting bolts and nuts sequentially in three steps, then remove the upper cover.

Fig. 6: Identifying Loosening Sequence Of Upper Cover Mounting Bolts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the intake manifold mounting bolts and nuts sequentially in three steps, then remove the intake manifold.

Fig. 7: Identifying Loosening Sequence Of Intake Manifold Mounting Bolts And Nuts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the new intake manifold gasket on the injector base.
2. Install the intake manifold. Tighten the bolts and nuts sequentially in three steps.

Fig. 8: Identifying Tightening Sequence Of Intake Manifold Mounting Bolts And Nuts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the upper cover. Tighten the bolts and nuts sequentially in three steps. Always use a new gasket.

Fig. 9: Identifying Tightening Sequence Of Upper Cover Mounting Bolts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the EVAP canister hose (A) and water bypass hoses (B).

Fig. 10: Identifying EVAP Canister Hose, Water Bypass Hoses, MAP Sensor Connector And Throttle Actuator Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the MAP sensor connector (C), throttle actuator connector (D) and EVAP canister purge valve connector (E).
6. Install the PCV hose (A), brake booster vacuum hose (B), vacuum hose (C) and connect the IMT actuator connector (D).

Fig. 11: Identifying PCV Hose, Brake Booster Vacuum Hose, Vacuum Hose And IMT Actuator Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the intake air duct (A), then install the breather pipe (B).

Fig. 12: Identifying Intake Air Duct And Breather Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the engine cover.

Fig. 13: Identifying Engine Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Clean up any spilled engine coolant.
10. After installation, check that all tubes, hoses, and connectors are installed correctly.
11. Refill the radiator with engine coolant, and bleed air from the cooling system with heater valve open (see step 10 on **COOLANT REPLACEMENT**).

INJECTOR BASE REMOVAL AND INSTALLATION

REMOVAL

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Remove the drive belt (see **DRIVE BELT INSPECTION**).
3. Remove the power steering (P/S) pump and power steering line bracket (see step 6 on **CYLINDER HEAD REMOVAL**).
4. Remove the intake manifold (see **REMOVAL**).
5. Remove the injectors (see **INJECTOR REPLACEMENT**).
6. Remove the harness bracket mount bolt (A) and the knock sensor connector (B).

Fig. 14: Identifying Harness Bracket Mount Bolt And Knock Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the injector base mount bolts/nuts (A), then remove the front injector base (B) and rear injector base (C).

Fig. 15: Identifying Injector Base Mount Bolts/Nuts, Front Injector Base And Rear Injector Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the front injector base (A) and rear injector base (B) with new gaskets (C), and tighten the bolts/nuts (D) in a crisscross pattern in three steps, beginning with the inner nuts.

NOTE: Front injector base gasket is different from rear one. Do not mix injector base gasket types.

Fig. 16: Identifying Front Injector Base, Rear Injector Base, Gaskets, And Bolts/ Nuts With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the knock sensor connector (A) and harness bracket mount bolt (B).

Fig. 17: Identifying Knock Sensor Connector And Harness Bracket Mount Bolt With Torque Specification

2008 Acura MDX
2007-09 ENGINE Intake Manifold and Exhaust System - MDX

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the injectors (see **INJECTOR REPLACEMENT**).
4. Install the intake manifold (see **INSTALLATION**).
5. Install P/S pump and P/S line bracket (see step 27 on **CYLINDER HEAD INSTALLATION**).
6. Install the drive belt (see **DRIVE BELT INSPECTION**).
7. Turn the ignition switch ON (II), but do not operate the starter. After the fuel pump runs about 2 seconds, the fuel pressure in the fuel line rises. Repeat this three times, then check for fuel leaks.

EXHAUST PIPE AND MUFFLER REPLACEMENT

NOTE: Use new gaskets and self-locking nuts when reassembling.

2008 Acura MDX

INTERIOR LIGHT SWITCH TEST/REPLACEMENT

1. Carefully pull down the roof console (A).

**Fig. 6: Identifying Roof Console**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the 20P connector (B) from the roof console.
3. Check for continuity between the terminals in each interior light switch position according to **Fig. 7**.

NOTE:

- Before testing, check the front individual map light bulb(s).
- When check for continuity across the diode, use the diode setting on the digital volt/ohm meter to check the diode bias.

Terminal		1		2	5	6	11
Position							
OFF		○	⊖	▶		○	
OFF (Front map light switch ON)		○	⊖	●	○		
Middle (DOOR) position		○	⊖	▶	○	○	
ON		○	⊖	▶	○	○	○

Fig. 7: Checking For Continuity Between Terminals In Each Switch Position

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, replace the roof console as an assembly.

FRONT INDIVIDUAL MAP LIGHT REPLACEMENT

1. Carefully pry off the lens (A) with a small screwdriver.

Front Map Light: 5 W x 2

Fig. 8: Identifying Front Individual Map Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the bulb(s) (B). If the bulb is OK, but there is a malfunction, check the interior light switch (see **INTERIOR LIGHT SWITCH TEST/REPLACEMENT**).

REAR INDIVIDUAL MAP LIGHT TEST/REPLACEMENT

1. Turn the ceiling light switch OFF.
2. Carefully pry off the lens (A) with a small screwdriver.

Rear Map Light: 5 W x 2

Fig. 9: Identifying Rear Individual Map Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the two mounting screws.
4. Disconnect the 3P connector (B) from the housing (C).

5. Check for continuity between the terminals.
 - There should be continuity between the No. 1 and No. 3 terminals with the left switch ON.
 - There should be continuity between the No. 1 and No. 2 terminals with the right switch ON.
6. If the continuity is not as specified, check the bulb(s) (D). If the bulbs are OK, replace the light.
7. Install the parts in the reverse order of removal.

CARGO AREA LIGHT TEST/REPLACEMENT

1. Turn the light switch OFF.
2. Carefully pry off the lens (A) with a small screwdriver.

Cargo Area Light: 8 W

Fig. 10: Identifying Cargo Area Light
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the two mounting screws.
4. Disconnect the 3P connector (B) from the housing (C).
5. Check for continuity between the terminals in each switch position according to the table.
 - There should be continuity between the No. 2 and No. 3 terminals with the switch in the MIDDLE position.
 - There should be continuity between the No. 2 and No. 1 terminals with the switch in the ON position.
6. If the continuity is not as specified, check the bulb (D). If the bulb is OK, replace the light.

TAILGATE LIGHT TEST/REPLACEMENT

1. Open the tailgate.
2. Carefully pry out the tailgate light (A).

Tailgate Light: 5 W

Fig. 11: Identifying Tailgate Light

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (B) from the light.
4. With the tailgate light switch ON, check for continuity between the No. 1 and No. 2 terminals. There should be continuity. If there is no continuity, check the bulb (C). If the bulb is OK, replace the tailgate light.

COURTESY LIGHT REPLACEMENT

1. Carefully pry off the lens (A) with a small screwdriver.

Courtesy Light: 3.4 W

Fig. 12: Identifying Courtesy Light

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pry out the housing (B) from the door, then disconnect the 2P connector (C).
3. Remove the bulb (D) from the socket.
4. Install the parts in the reverse order of removal.

GLOVE BOX LIGHT REPLACEMENT

1. Remove the glove box stops and damper (see **GLOVE BOX REMOVAL/INSTALLATION**).
2. Turn the bulb socket (A) 45° counterclockwise to remove it.

Glove Box Light: 3.4 W

Fig. 13: Identifying Glove Box Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bulb (B) from the socket.
4. If necessary, remove the lens (C).
5. Install the parts in the reverse order of removal.

VANITY MIRROR LIGHT TEST/REPLACEMENT

1. Open the sunvisor.
2. Remove the sunvisor (see **SUNVISOR REMOVAL/INSTALLATION**).
3. Disconnect the 2P connector (A) from the vanity mirror light.

Vanity Mirror Light: 2 W

Fig. 14: Identifying Vanity Mirror Light

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity between the No. 1 and No. 2 terminals.
 - With the vanity mirror cover (B) opened, there should be continuity.
 - With the vanity mirror cover closed, there should be no continuity.
5. If the continuity is not as specified, remove the lens (C) and replace the bulb (D) or the sunvisor.

AMBIENT LIGHT TEST

1. Carefully pull down the roof console and disconnect the 20P connector (A).

Fig. 15: Identifying Ambient Light

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the roof console 20P connector No. 3 terminal to battery power and No. 7 terminal to body ground. The ambient lights (B) should turn on. If they do not turn on, replace the roof console.

FOOTWELL LIGHT TEST/REPLACEMENT

1. Carefully pry out the footwell light lens (A) and housing (B).

Footwell Light: 3.4 W

Fig. 16: Identifying Footwell Light

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the 2P connector (C) from the light.
3. Check for continuity between the No. 1 (+) and No. 2 (-) terminals. There should be continuity. If there is no continuity, check the bulb (C). If the bulb is OK, replace the footwell light.
4. Install the parts in the reverse order of removal.

TAILGATE LATCH SWITCH TEST

1. Open the tailgate.
2. Remove the tailgate trim panel (see TRIM REMOVAL/INSTALLATION - TAILGATE AREA).
3. Disconnect the 2P connector (A) from the tailgate latch switch (B).

Fig. 17: Identifying Tailgate Latch Switch

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity between the No. 1 and No. 2 terminals.
 - With the tailgate open, there should be continuity.
 - With the tailgate closed, there should be no continuity.
5. If the continuity is not as specified, replace the latch assembly.

DRIVER'S AMBIENT LIGHT REPLACEMENT

1. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD LOWER COVER REMOVAL/INSTALLATION**), then disconnect the 2P connector from the driver's ambient light (A).

Fig. 18: Identifying Driver's Ambient Light

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the bulb socket 45° counterclockwise to remove the bulb.

3. Install the bulb in the reverse order of removal.

FRONT PASSENGER'S AMBIENT LIGHT REPLACEMENT

1. Remove the passenger's dashboard undercover (see **PASSENGER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**), then disconnect the 2P connector from the driver's ambient light (A).

Fig. 19: Identifying Front Passenger's Ambient Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the bulb socket 45° counterclockwise to remove the bulb.
3. Install the bulb in the reverse order of removal.

2007-09 ACCESSORIES AND EQUIPMENT

Interior Trim - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Interior Trim Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRIM REMOVAL/INSTALLATION - DOOR AREAS

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

FRONT DOOR SILL AREA

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend or scratch the trim and panels.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Detach the hooks (A) and tabs (B) from the kick panel (C) and B-pillar lower trim (D), and pull the front door sill trim (E) up by hand to detach the clips (F), then remove it from the front door opening seal (G).

Fig. 2: Identifying Hooks, Tabs, Kick Panel, B-Pillar Lower Trim And Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If necessary, pull the front side outer trim (H) up to detach the clips (I), then remove the trim.
3. Remove the left kick panel (A) or the right kick panel (8).
 1. Pull out the door opening seal (C) as needed from the kick panel hooks (D) and the door opening flange.
 2. Remove the clip (E).
 3. Pull the kick panel back by hand to detach the clip (F), then remove it.

Driver's

Fig. 3: Identifying Door Opening Seal, Kick Panel Hooks And Clip - Driver'S
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's

Fig. 4: Identifying Door Opening Seal, Kick Panel Hooks And Clip - Passenger'S
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull out the front door opening seal (A) from the trim hooks (B) and around the front door opening flange, then remove the seal.

Fig. 5: Identifying Front Door Opening Seal And Trim Hooks
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the trim in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

REAR DOOR SILL AREA

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend or scratch the trim and panels.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Detach the hooks (A) and tabs (B) from the B-pillar lower trim (C) and rear side trim panel (D), and pull the rear door sill trim (E) up by hand to detach the clips (F, G), then remove it from the rear door opening seal (H).

Fastener Locations

F ▷ : Clip, 2 (Gray) G ▷ : Clip, 1 (Pink) J ▷ : Clip, 3

Fig. 6: Identifying Hooks, Tabs, B-Pillar Lower Trim, Rear Side Trim Panel And Rear Door Sill Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If necessary, pull the rear side outer trim (I) up to detach the clips (J), then remove the trim.
3. Pull out the rear door opening seal (A) from the trim hooks (B) and around the rear door opening flange, then remove the seal.

Fig. 7: Identifying Rear Door Opening Seal And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the trim in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

TRIM REMOVAL/INSTALLATION - PILLAR AREAS

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

A-PILLAR TRIM

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- Follow the A-pillar trim installation procedure carefully; improper installation could cause the side curtain airbags to deploy improperly and possibly cause injury.
- Put on gloves to protect your hands.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the trim and panels.
- The upper clip in the A-pillar trim (A) consists of a resin grommet (B) and a metal pin (C). The groove (D) in the grommet secures it to the body panel (E). The shoulder (F) on the grommet is broken during removal, so the clip must be replaced with a new one when the trim is reinstalled.

Fig. 8: Identifying A-Pillar Trim, Resin Grommet, Metal Pin And Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Pull the front door opening seal away from the A-pillar as needed (see step 4 on).
2. Hit the surface of the A-pillar trim (A) with a rubber mallet. The clip is located under the top of the A-pillar trim near the "SIDE CURTAIN AIRBAG" mark (B). Hitting the trim surface breaks the shoulder (C) on the grommet (D) and pushes the pin (E) and grommet against the body (F).

NOTE: The clip must be replaced with a new one when the A-pillar trim is reinstalled.

Fig. 9: Identifying A-Pillar Trim, Shoulder, Grommet And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull the top of the A-pillar trim (A) back by hand to remove the pin (B) from the grommet (C) remaining in the body (D).

NOTE: The edge of the headliner (E) lies between the A-pillar trim and the guide bracket (F) of the trim. The A-pillar trim shouldn't be pulled out too far at a time, or the guide bracket might catch the headliner and bend it.

Fig. 10: Identifying A-Pillar Trim, Pin, Grommet And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the A-pillar trim (A) by hand to detach the remaining clips, then pull the trim up from the dashboard (B).

Fastener Locations

▷ : Clip, 2
(Green)

Fig. 11: Identifying A-Pillar Trim And Dashboard
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the grommet from the body.

NOTE: The upper grommet must be replaced with a new one because the grommet is damaged during removal.

6. If the side curtain airbag has been deployed, replace the A-pillar trim with a new one (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
7. If the side curtain airbag has not been deployed, check the A-pillar trim (A) and note the following:
 - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it if it has any of these types of damage:
 - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
 - Any cracks or stress-whitening in the clip and pin seating surfaces (B)
 - Damaged guide bracket (C)
 - Replace the upper grommet with a new one because it will be damaged during removal.
 - If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 12: Identifying Guide Bracket, Clips And Pin Seating Surfaces

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Before installing the A-pillar trim (A), carefully remove the grommet (B) from the pin (C) on the upper clip.

Fig. 13: Identifying A-Pillar Trim, Grommet And Pin

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Check the overlap between the headliner and A-pillar trim, and if necessary, adjust it (see **CHECKING AND ADJUSTING THE HEADLINER/PILLAR TRIM OVERLAP**).
10. Carefully reinstall the grommet (A) on the pin (B) and seat them on the A-pillar trim (C) as shown.

Fig. 14: Identifying Grommet, Pin And A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Reinstall the A-pillar trim (A).
 1. Insert the bottom of the trim into the dashboard (B).
 2. Place the trim over the A-pillar (C), and fit its upper clip (D), the other clips (E) and the pin (F) into holes (G) in the A-pillar, then lightly push the trim into place.

NOTE:

- Make sure that the side curtain airbag tether (H) is below the clip.
- Make sure the side curtain airbag isn't tucked down under the clips and ribs.
- Apply pressure to the areas of the trim on the upper clip until these clip fittings are felt. If you push too hard, the clip will be damaged, and it will not hold the trim properly.
- Make sure the upper clip portions of the trim don't come off the body by tugging on the trim.

Fig. 15: Identifying A-Pillar, Upper Clip, Other Clips And Pin
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Reinstall the front door opening seal.

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

B-PILLAR UPPER/LOWER TRIM

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend or scratch the trim and panels.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove these items:

- Front door sill trim (see **FRONT DOOR SILL AREA**)
- Rear door sill trim (see **REAR DOOR SILL AREA**)

- Front door opening seal, as needed (see step 4)
 - Rear door opening seal, as needed (see step 3)
2. Slide the front seat fully forward.
 3. Remove the B-pillar lower trim (A).
 1. Detach the lower clips by pulling the middle of the trim back by hand.
 2. While releasing the upper tabs (B), pull the upper portion of the trim back to release the upper hooks (C).

Fastener Locations

▷ : Clip, 2
(Gray)

Fig. 16: Identifying Upper Tabs And Upper Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the front seat belt lower anchor (see **FRONT SEAT BELT REPLACEMENT**).
5. Pull the bottom of the B-pillar upper trim (A) back by hand to detach the lower hooks (B).

Fastener Location

▷ : Clip, 1
(Pink)

Fig. 17: Identifying B-Pillar Upper Trim And Lower Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Detach the upper clip by pulling the top of the B-pillar upper trim. Pull the trim down to release the upper hook (C) from the side curtain airbag B-pillar bracket (D).
7. Pass the front seat belt (A) lower anchor out through a hole in the slider (B), then remove the B-pillar upper trim (C).

Fig. 18: Identifying Upper Hook, Side Curtain Airbag B-Pillar Bracket And B-Pillar Upper Trim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the trim in the reverse order of removal, and note these items:
 - If the clips (A) are damaged or stress-whitened, replace them with new ones.
 - If the side curtain airbag has deployed, replace the B-pillar upper and lower trim and all clips on the trim with new ones (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
 - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it if it has any of these types of damage:
 - Any cracks or deformations in the B-pillar upper trim (B) and the upper hook (C), and any stress-whitened areas in the upper part of the trim
 - Any cracks or deformations in the B-pillar lower trim (D), and any breakages in the part (E) fitted with the B-pillar upper trim
 - Any cracks or stress-whitened areas in the clips seating surfaces (F)
 - Replace any damaged parts with new ones.
 - Make sure the top of the trim overlaps with the headliner correctly (see **CHECKING AND ADJUSTING THE HEADLINER/PILLAR TRIM OVERLAP**).
 - Make sure the pin (G) on the front seat belt shoulder anchor adjuster (H) and the hole (I) on the back of the slider are engaged when installing the B-pillar upper trim.
 - Make sure the trim hook is installed into the side curtain airbag B-pillar bracket securely.
 - Push the clip and hooks into place securely.
 - Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.

Trim inspection

Fig. 19: Identifying Pin, Front Seat Belt Shoulder Anchor Adjuster And Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Slider engagement with shoulder anchor adjuster

Fig. 20: Identifying Pin, Front Seat Belt Shoulder Anchor Adjuster And Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

QUARTER PILLAR TRIM

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- Follow the quarter pillar trim installation procedure carefully; improper installation could cause the side curtain airbag to deploy improperly and possibly cause injury.
- Put on gloves to protect your hands.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to scratch the trim and panels.
- The upper clip in the quarter pillar trim (A) consists of a grommet (B) and a pin (C). The grommet expanded with the pin secures it to the body panel (D). The projections (E) on the pin is broken during removal, so the clip must be replaced with a new one when the trim is reinstalled.

Fig. 21: Identifying Quarter Pillar Trim, Body Panel, Grommet And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove these items:

- Rear door opening seal, as needed (see step 3)
- Tailgate weatherstrip, as needed (see **TAILGATE WEATHERSTRIP REPLACEMENT**)
- Second row seat belt lower anchor (see step 3 **SECOND ROW SEAT BELT REPLACEMENT**)
- Seat belt exit C-pillar cap (see step 4 **SECOND ROW SEAT BELT REPLACEMENT**)
- Seat belt exit D-pillar cap (see step 3 **THIRD ROW SEAT BELT REPLACEMENT**)
- With power tailgate: Left tailgate side trim (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**)

2. Remove the upper portion of the rear side trim panel, as needed (see **REAR SIDE TRIM PANEL REMOVAL/INSTALLATION**).

3. With power tailgate: Remove the pivot bracket mounting bolts, then push the power tailgate rod (A) in the quarter pillar trim (B).

Fastener Locations

▶ : Bolt, 2

Fig. 22: Identifying Power Tailgate Rod And Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Hit the surface of the quarter pillar trim (A) with a rubber mallet. The clip is located in the top of the C-pillar near the "SIDE CURTAIN AIRBAG" mark (B). Hitting the trim surface breaks the projections (C) on the pin (D) and pushes it into the grommet (E) and against the body (F).

NOTE: The clip must be replaced with a new one when the quarter pillar trim is reinstalled.

Fig. 23: Identifying Quarter Pillar Trim, Projections, Pin And Grommet

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Hit the surface of the quarter pillar trim (A) with a rubber mallet. The clip is located in the seat belt exit D-pillar cap opening. Hitting the trim surface breaks the projections (B) on the pin (C) and pushes it into the grommet (D) and against the body (E).

NOTE: **The clip must be replaced with a new one when the quarter pillar is reinstalled.**

Fig. 24: Identifying Quarter Pillar Trim, Projections, Pin And Grommet
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. While pulling the upper portion of the rear side trim panel (A) back, detach the clips (B, C), then release the lower portion of the quarter pillar trim (D) away from the body.

NOTE: The quarter pillar is still fastened with two upper clips located in the middle of it.

Fastener Locations

B ▷ : Clip, 4 (Gray)
 C ▷ : Clip, 1 (Pink)

Fig. 25: Identifying Rear Side Trim Panel, Clips And Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. While pulling the lower portion of the quarter pillar trim (A) away from the body, hit the surface of the quarter pillar trim with a rubber mallet. The clip is located in the rear of the hollow (B) in the trim. Hitting the trim surface breaks the projections (C) on the pin (D) and pushes it into the grommet (E) and against the body (F).

NOTE: The clip must be replaced with a new one when the quarter pillar trim is reinstalled.

Fig. 26: Identifying Quarter Pillar Trim, Projections, Pin And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Slide the upper clip portion (A) of the quarter pillar trim (B) up at a 45° angle to remove the trim from the clip. The clip can be removed once the trim is clear.

Fig. 27: Identifying Upper Clip Portion And Quarter Pillar Trim

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the quarter pillar trim (A). If equipped with the premium sound system, disconnect the D-pillar speaker connector (B). If equipped with power tailgate, pull the power tailgate rod (C) out of the slit (D) in the quarter pillar trim.

**Fig. 28: Identifying Quarter Pillar Trim, D-Pillar Speaker Connector And Power Tailgate Rod**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Hit the remaining upper clip (A) with a rubber mallet. Hitting the clip breaks the projections (B) on the pin (C) and pushes it into the grommet (D) and against the body (E).

NOTE: The clip must be replaced with a new one when the quarter pillar trim is reinstalled.

Fig. 29: Identifying Upper Clip, Projections, Pin, Grommet And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. If the side curtain airbag has not deployed, remove the quarter pillar trim and all the clips on the trim with new ones (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
12. If the side curtain airbag has not deployed, remove the upper clips (A) from the removed quarter pillar trim (B) and discard them. Then check the trim and note the following:
 - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it if it has any of these types of damage:
 - Any cracks, deformations, or stress-whitened areas in the quarter pillar trim
 - Any cracks or stress-whitened areas in the clip seating surfaces (C, D)
 - If any of the lower clips (E) are damaged or stress-whitened, replace them.
 - Replace the upper clips with new ones.

Fig. 30: Identifying Clip Seating Surfaces And Lower Clips
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Before installing the quarter pillar trim (A), whether replaced or reinstalled, temporarily remove the new clips (B).

Fig. 31: Identifying Quarter Pillar Trim And Clips
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Check the overlap between the headliner and quarter pillar trim, and if necessary, adjust it (see **CHECKING AND ADJUSTING THE HEADLINER/PILLAR TRIM OVERLAP**).
15. Carefully reinstall the clips (A) to the quarter pillar trim (B). Make sure that the grommet (C) is nearest to the top of the pin (D) as shown.

Fig. 32: Identifying Clips, Quarter Pillar Trim, Grommet And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Reinstall the quarter pillar trim (A).
 1. If equipped with the premium sound system, reconnect the D-pillar speaker connector (B).
 2. If equipped with power tailgate, pass the power tailgate rod (C) through the slit (D) in the quarter pillar trim.
 3. Place the trim over the C-pillar/D-pillar (E), and fit its upper clips (F), and all of the other clips (G, H) into holes (I) in the body, then lightly push the trim into place.

NOTE:

- Make sure the side curtain airbag isn't tucked down under the clips and ribs.
- Apply pressure to the areas of the trim on the upper clips until these clip fittings are felt. If you push too hard, the clip will be damaged, and it will not hold the trim properly.
- Make sure the upper clip portions of the trim don't come off the body by tugging on the trim.

Fig. 33: Identifying C-Pillar/D-Pillar, Upper Clips, Clips And Holes

Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. With power tailgate: Fasten the pivot bracket (A) on the tailgate.

Fig. 34: Identifying Pivot Bracket With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Reinstall all of the removed parts.

TRIM REMOVAL/INSTALLATION - CARGO AREA

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend or scratch the trim and panels.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the cargo floor lid (A). A

Fig. 35: Identifying Cargo Floor Lid

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the hooks (A) from the rear side trim panel (B), and pull the rear trim panel (C) up by hand to detach the clips, then remove it.

Fastener Locations

▷ : Clip, 4
(Gray)

Fig. 36: Identifying Hooks, Rear Side Trim Panel And Rear Trim Panel

3. Turn the lock knobs (A) 90 °, then remove the tool set holder (B).

Fig. 37: Identifying Lock Knobs And Tool Set Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screws, then remove the cargo lid hinges (A).

Fastener Locations

► : Screw, 2

Fig. 38: Identifying Cargo Lid Hinges

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the cargo rear trim panel (A).

Fig. 39: Identifying Cargo Rear Trim Panel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trim in the reverse order of removal, and note these items:
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips and hooks into place securely.

TRIM REMOVAL/INSTALLATION - REAR SIDE AREA

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

REAR SIDE TRIM PANEL REMOVAL/INSTALLATION

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend or scratch the trim and panels.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove these items:

- Rear door sill trim (see **REAR DOOR SILL AREA**)
- Rear door opening seal, as needed (see step 3)
- Tailgate weatherstrip, as needed (see **TAILGATE WEATHERSTRIP REPLACEMENT**)
- Cargo floor lid (see step 1)
- Rear trim panel (see step 2)
- Cargo lid hinges (see step 4)
- Cargo rear trim panel (see step 5)

2. Raise the third row seat up, and remove the clips from under the third row seat.

Fastener Locations

▷ : Clip, 2

Fig. 40: Identifying Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Fold the third row seat-back forward.
4. Pry out the cover (A) and remove the bolt (B), then remove the tie down hook (C) (two places).

Fig. 41: Identifying Cover, Bolt And Tie Down Hook With torque Specification
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Right side: Pry out the lid (A) and remove the screw in the pull pocket.

Fig. 42: Identifying Lid
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Open the cargo hook (A). Pry out the cover (B) and remove the screw.

Fastener Location

► : Screw, 1

Fig. 43: Identifying Cargo Hook And Cover

TRIM REMOVAL/INSTALLATION - TAILGATE AREA

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Put on gloves to protect your hands.
- Take care not to bend or scratch the trim and panels.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Remove the tailgate upper trim panel (A).
 1. Detach the hooks (B) and tabs (C) from the left tailgate side trim (D) and right tailgate side trim (E).
 2. Pull the tailgate upper trim panel back by hand to detach the clips, then remove it.

Fig. 54: Identifying Hooks, Tabs, Left Tailgate Side Trim And Right Tailgate Side Trim
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the left tailgate side trim (A) and the right tailgate side trim (B).
 1. Pull out the top of the side trim to detach the clips.
 2. Detach the tabs (C) and hooks (D) from the tailgate lower trim panel (E).

Fig. 55: Identifying Left Tailgate Side Trim, Right Tailgate Side Trim, Tabs And Hooks
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the tailgate pull pocket (A).
 1. Pry the hooks (B) with a trim tool.
 2. Carefully pull the edge of the tailgate lower trim panel (C) just beside the tailgate pull pocket by hand, and push out the inside hooks (D).
 3. Pull down the upper edge of the pocket and release the lower tabs (E).
 4. With power tailgate: Disconnect the power tailgate close switch connector (F).

Fig. 56: Identifying Tailgate Pull Pocket, Hooks, Tailgate Lower Trim Panel And Lower Tabs
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the tailgate lights (see TAILGATE LIGHT TEST/REPLACEMENT).
5. Remove the tailgate lower trim panel (A).
 1. Detach the clips (B) beside the tailgate latch.
 2. Pull down the panel to detach all of the clips (C).

Fastener Locations

B, C ▷ : Clip, 16 (Gray)
 D ▷ : Clip, 1 (Green)

Fig. 57: Identifying Tailgate Lower Trim Panel And Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trim and panel in the reverse order of removal, and note these items:
 - Make sure the power tailgate close switch connector is plugged in properly.
 - If the clips are damaged or stress-whitened, replace them with new ones.
 - Push the clips, hooks, and tubs into place securely.

SUNVISOR REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE:

- Take care not to scratch the headliner.
- Be careful not to damage the dashboard and other interior trim.
- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- When using a flat-tip screwdriver, wrap it with protective tape to prevent damage.

1. Using a trim tool, release the tabs (A) of the sunvisor cap (B) from the bracket (C).

Fig. 58: Identifying Tabs, Sunvisor Cap And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the sunvisor (A).
 1. Remove the screws.

2. Remove the sunvisor from the body and holder (B).
3. Disconnect the vanity mirror light connector (C).

Fig. 59: Identifying Sunvisor, Holder And Vanity Mirror Light Connector With Torque Specification

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a flat-tip screwdriver, push the hook (A), and turn the holder (B) 90°, then pull it out.

Fig. 60: Identifying Hook And Holder

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the side curtain airbag has deployed (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**), replace the sunvisor with a new one.
5. If the side curtain airbag has not deployed, to prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect removed sunvisor and replace it if it has any cracks or damage:
 - Any cracks in the sunvisor stay base (A)
 - Any bends or cracks in the sunvisor stay shaft (B)

- Any cracks in the sunvisor base (C)
- Any cracks in the vanity mirror base (D)

Fig. 61: Identifying Vanity Mirror Base, Sunvisor Base, Sunvisor Stay Base And Sunvisor Stay Shaft

6. Install the sunvisor in the reverse order of removal, and make sure the vanity mirror light connector is plugged in properly.

GRAB HANDLE REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

NOTE: Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.

1. Lower the grab handle (A), then pull out the caps (B) by prying up at the notches (C) with a small flat-tip screwdriver.

Fig. 62: Identifying Grab Handle, Caps And Notches
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pinching the clips (A), release the hooks (B), then remove the grab handle (C).

Fig. 63: Identifying Clips, Hooks And Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a pair of pliers, remove all of the clips (A) by pinching its hooks.

Fig. 64: Identifying Clips

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the side curtain airbag has deployed, replace the grab handle with a new one (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
5. If the side curtain airbag has not deployed, to prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect removed pieces and replace them if they have any of these types of damage:
 - Any cracks or damage in the grab handle (A)
 - Any cracks or stress-whitening in the caps (B)

Fig. 65: Identifying Grab Handle And Caps

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the clips (A) to the grab handle (B), then install the caps (C) fully into the clips.

Fig. 66: Identifying Clips, Grab Handle And Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Position the grab handle (A) on the bracket (B), and push on the grab handle until the clips (C) snap into place securely.

HEADLINER REMOVAL/INSTALLATION

Special Tools Required

KTC trim tool set SOJATP2014 *

* Available through the American Honda Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.
- Take care not to bend and scratch the headliner.
- Be careful not to damage the dashboard and other interior trim.

1. Remove these items:

- A-pillar trim, both sides (see **A-PILLAR TRIM**)
- Front seat belt upper anchor, both sides (see step 7 **FRONT SEAT BELT REPLACEMENT**)
- B-pillar lower trim, both sides (see **B-PILLAR UPPER/LOWER TRIM**)
- B-pillar upper trim, both sides (see **B-PILLAR UPPER/LOWER TRIM**)
- Quarter pillar trim, both sides (see **QUARTER PILLAR TRIM**)
- Sunvisors, both sides (see **SUNVISOR REMOVAL/INSTALLATION**)
- Grab handles, four places (see **GRAB HANDLE REMOVAL/INSTALLATION**)
- Rear individual map light (see **REAR INDIVIDUAL MAP LIGHT TEST/REPLACEMENT**)
- Cargo area light (see **TAILGATE LIGHT TEST/REPLACEMENT**)
- Center second row seat belt cover (see step 1 on **SECOND ROW SEAT BELT REPLACEMENT**)
- RES display cover (for some models) (see **REAR CONTROLLER AND SCREEN REMOVAL/INSTALLATION**)
- Roof console (see **INTERIOR LIGHT SWITCH TEST/REPLACEMENT**)

2. Remove the screws, then remove the roof console bezel (A).

Fastener Locations

► : Screw, 4

Fig. 68: Identifying Roof Console Bezel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, remove the remaining roof console clips (A) from the body and the moonroof frame (B).

Fig. 69: Identifying Roof Console Clips And Moonroof Frame

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the roof wire harness connector (A).

Fig. 70: Identifying Roof Wire Harness Connector

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With rear entertainment system: Disconnect the RES wire harness connectors (A) and detach the harness clips (B) from the left A-pillar (C).

Fig. 71: Identifying RES Wire Harness Connectors, Clips And Left A-Pillar
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. With rear entertainment system: Disconnect the RES wire harness connectors (A) from the rear controller and screen (B).

Fig. 72: Identifying RES Wire Harness Connectors, Rear Controller And Screen
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Lower the headliner (A). The vehicle with rear entertainment system is shown; and without rear entertainment system is similar.
 1. Remove the front door opening seals (B), rear door opening seals (C), and tailgate weatherstrip (D) from each roof portion.
 2. With the help of an assistant, detach the rear clips by pulling the rear portion of the headliner down.
 3. With the help of an assistant, release the fasteners (E) by lowering the headliner.

Fig. 73: Identifying Headliner, Front Door Opening Seals, Rear Door Opening Seals And Tailgate Weatherstrip

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. With the help of an assistant, pull the headliner (A) along with the roof wire harness and rear entertainment system wire harness (for some models) out through the tailgate opening. Do not bend the liner. Bending the liner will crease and damage it.

Fig. 74: Identifying Headliner

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If necessary, detach the hooks, then remove the roof side pad (A).

Fastener Locations

▷ : Hook, 2

**Fig. 75: Identifying Roof Side Pad**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. If necessary, remove the cushion tapes (A) fastening the roof subharness (B) to the headliner (C), detach the harness clips (D) and release the harness from the harness protector base (E), then remove them from the headliner.

Fastener Locations

A ▷ : Cushion tape, 8 D ▷ : Clip, 5

**Fig. 76: Identifying Cushion Tapes, Roof Subharness, Headliner, Harness Clips And Protector Base**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. With rear entertainment system: If necessary, remove the cushion tape (A) fastening the RES wire harness (B) to the headliner (C), detach the harness clips (D) and release the harness from the harness protector base (E), then remove them from the headliner.

Fastener Locations

A ▷ : Cushion tape, 5 D ▷ : Clip, 2

Fig. 77: Identifying Cushion Tape, RES Wire Harness, Headliner And Harness Clips
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the headliner in the reverse order of removal, and note these items:
 - If the side curtain airbag has deployed, replace the headliner and removed trim pieces with new ones (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
 - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect removed pieces and replace them if they have any of these types of damage:
 - Any crease or tears in the headliner (A)
 - Any cracks or breakages in the grab handle (B)
 - Any damages around the grab handle holes (C) or sunvisor holes in the headliner
 - Any cracks in the sunvisor stay base (D)
 - Any bends or cracks in the sunvisor stay shaft (E)
 - Any cracks in the sunvisor base (F)
 - Any cracks or breakages in the vanity mirror base(G)
 - Any fasteners (H) and clip bases (I) which have come off the headliner
 - When installing the grab handle, push on the handle against the bracket (J) until the clips (K) snap into place securely.
 - Check if the clips are damaged or stress-whitened, and if necessary, replace them with new ones.
 - Replace the removed cushion tape with new ones.
 - Check that both sides of the headliner are securely attached to the trim.
 - Make sure the headliner overlaps the trim pieces correctly (see **CHECKING AND ADJUSTING THE HEADLINER/PILLAR TRIM OVERLAP**).
 - When reinstalling the headliner through the tailgate opening, be careful not to fold or bend it. Also, be careful not to scratch the body.

SYSTEM DESCRIPTION

SECURITY ALARM SYSTEM

The security alarm system is integrated with the multiplex integrated control system. For the system to arm, the ignition switch must be in the LOCK (0) position, the key must be removed, and the MICU must receive signals that the doors, hood, and tailgate are closed and locked. The alarm can be armed or disarmed at anytime by locking or unlocking the driver's door with the key or pressing the LOCK/UNLOCK button on the transmitter, the alarm can also be armed by locking (with the lock knob) then closing the driver's door.

When everything is closed and locked, the only inputs that are grounded, and have 0 V, are the driver's door lock knob switch (LOCK position), and the audio unit. In other words, all of the other switches are open, and have about 5.0 V in sleep mode or 12 V in awake mode, including the key cylinder switches. The security indicator in the gauge control module begins to flash immediately after the doors, tailgate, and hood are closed and locked, and then, after 20 seconds, the flashing intervals of the security indicator change to indicate that the alarm is fully armed. If the security indicator does not flash, the system is not arming. If the LOCK button is pressed a second time within 5 seconds (Keyless LOCK acknowledgment is turned ON) and the vehicle is completely closed and locked, a beep sounds and parking lights flash one time to confirm the security alarm system is armed.

If one of the switches is misadjusted or shorted internally (0 V), or there is a short in the circuit (0 V), the security system will not arm. A switch that is slightly misadjusted can cause the alarm to sound for no apparent reason. In this case, a significant change in outside air temperature, the vibration of a passing vehicle, or something bumping into the vehicle could cause the alarm to sound. There is no glass breakage or motion detector feature.

If anything is opened or improperly unlocked after the system is armed, the control unit receives a ground signal from that switch, the 5-12 V reference drops to 0 V, and the system sounds the alarm. If the audio unit is disconnected, the input loses its ground, and the input voltage goes to 5-12 V, and the system sounds the alarm. The system sounds the alarm when any of following occur while the security system is armed:

- A door or the tailgate is forced open
- A door is unlocked without using the key or the transmitter
- The hood is opened
- The audio unit (or navigation unit, rear controller and screen) is disconnected
- The transmitter panic is operated
- The ignition switch is turned ON (II)

When the system sounds the alarm, the horns sound and the exterior lights flash for 2 minutes. The alarm can be stopped at any time by unlocking the driver's door with the key or by pressing any button on the transmitter.

Panic Mode

The panic mode sounds the alarm in order to attract attention. When the PANIC button on the transmitter is pressed and held for about 2 seconds, the alarm sounds and the exterior lights flash for about 20 seconds.

The panic mode can be cancelled at anytime by pressing any button on the remote or by turning the ignition switch ON (II). The panic mode will not function if the ignition switch is ON (II).

Keyless Entry System

The keyless entry system is integrated with the multiplex integrated control system. Transmitters 1 and 2 (Identified on the back of each transmitter) are linked to the DPMS, the climate control settings, the custom memory settings (in the MID), the audio, the navigation and the illumination settings. Depending on which transmitter unlocks the vehicle, these settings are chosen.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

Some functions of the security, keyless entry, and power door locks can be customized using the MID keyless memory setting. They include:

- **AUTO DOOR LOCK:** Door locking can be turned off, or turned on when shifting from Park or at a speed above 15mph.
- **AUTO DOOR UNLOCK:** Door unlocking can be turned off, or turned on when shifting to Park or turning the ignition switch OFF.
- **WHENEVER UNLOCKING:** Door unlocking can be set to unlock all doors or only the driver's door on the first push.
- **KEYLESS DOOR LOCK ACKNOWLEDGMENT:** The beep and the front parking lights can be turned on or off when pressing the LOCK/UNLOCK button on the remote.
- **SECURITY RELOCK TIMER:** Select the time (30,60, or 90 sec.) that the doors relock if you unlock the doors with the remote, but do not open any of them.
- **HEADLIGHT AUTO OFF TIMER:** Select time (0,15,30, or 60 sec.) to turn the headlights off after removing the key from the ignition opening, then closing the driver's door.
- **AUTO LIGHT SENSITIVITY:** Automatic lighting sensor sensitivity can be adjusted five steps (MIN/LOW/MID/HIGH/ MAX).
- **INTERIOR LIGHT DIMMING TIMER:** Select the dimming time (15,30, or 60 sec.) of the interior lights after closing the door with the key removed from the ignition.

○ **METER SETUP:**

Language-English/French/Espanol

Outside air temperature-+5 +4 +3+2+10-1 -2 -3 -4 -5

Trip A an average Fuel Reset w/fill-ON/OFF

○ WIPER SETUP:

Wiper action intermittent/with speed

The transmitters can be linked and unlinked to the keyless memory settings by pressing the LOCK and UNLOCK buttons at the same time for about 1 second. The LED on the transmitter blinks twice when unlinked, and once when linked.

The keyless entry system allows you to lock and unlock the vehicle with the transmitter. When you press the LOCK button, all the doors lock (unless any one of the doors is not fully closed or the key is in the ignition switch).

When you press the UNLOCK button the first time, only the driver's door unlocks, if keyless memory setting "WHENEVER UNLOCKING" is set to Driver's Door. The other doors unlock when you press the UNLOCK button a second time. All the doors unlock when you press the UNLOCK button the first time if keyless memory setting "WHENEVER UNLOCKING" is set to All Doors.

NOTE: The doors will not lock with the transmitter if a door is not fully closed, or if the ignition key is in the ignition switch.

If the UNLOCK button is pressed, released, then pressed and held, the windows and the moonroof begin to open. The windows and the moonroof stop if the button is released. The windows and moonroof cannot be closed with the remote. See power windows for more information and troubleshooting.

When the interior lights switch is in the "DOOR" position, the individual map lights will come on when the UNLOCK button is pressed. If a door is not opened, the lights will go off in about 30,60, or 90 seconds (depending on the keyless memory setting "SECURITY RELOCK TIMER"), and the doors will relock. If the doors are locked with the transmitter within 30 seconds, the lights will go off immediately.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Turn the driver's door key cylinder to the LOCK and UNLOCK positions with the ignition key.
4. Check for DTCs with the HDS.

Is DTC B2179 indicated?

YES - Go to step 5.

NO - Intermittent failure, the driver's door key cylinder switch system is OK at this time. Check for loose or poor connections.

5. With the driver's door key cylinder switch in neutral position, select DOOR LOCK from the BODY ELECTRICAL system select menu, and enter the DATA LIST.
6. Check the ON/OFF Information of the Driver's Door Key Cylinder Switch (LOCK) and Driver's Door Key Cylinder Switch (UNLOCK) in the DATA LIST.

Are both information indicators OFF?

YES - Go to step 7.

NO - Go to step 8.

7. Turn the driver's door key cylinder to the LOCK and UNLOCK positions with the ignition key, and check the ON/OFF information of the Driver's Door Key Cylinder Switch (LOCK) and Driver's Door Key Cylinder Switch (UNLOCK) in the DATA LIST.

Are both Driver's Door Key Cylinder Switch (LOCK) and Driver's Door Key Cylinder Switch (UNLOCK) information indicators ON at the same time with the door key cylinder switch in the LOCK or UNLOCK position?

YES - Test the key cylinder switch (see **DOOR KEY CYLINDER SWITCH TEST**). If it is OK, repair the short between the No. 8 BLU and No. 9 LT BLU wires.

NO - Replace the driver's MPCS unit.

8. Disconnect the driver's door lock actuator 10P connector.
9. Check the ON/OFF information of the Driver's Door Key Cylinder Switch (LOCK) and Driver's Door Key Cylinder Switch (UNLOCK) in the DATA LIST.

Are both information indicators OFF?

YES - Faulty driver's door key cylinder switch; replace the driver's door lock actuator assembly.

NO - Go to step 10.

10. Turn the ignition switch to LOCK (0).
11. Disconnect driver's MPCS unit connector A (40P).
12. Check for continuity between body ground and the driver's door lock actuator 10P connector No. 8 and No. 9 terminals individually.

DRIVER'S DOOR LOCK ACTUATOR 10P CONNECTOR

Wire side of female terminals

Fig. 8: Identifying Continuity Between Driver's Door Lock Actuator 10P Connector No. 8 And No. 9 Terminals And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair short to ground in the wire.

NO - Replace the driver's MPCS unit.

DTC B2180: DRIVER'S DOOR LOCK SWITCH LOCK/ UNLOCK SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Lock and unlock the driver's door with the driver's door lock switch.
3. Check for DTCs with the HDS.

Is DTC B2180 indicated?

YES - Go to step 4.

NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections between the driver's MPCS unit and the driver's door lock switch.

4. With the driver's door lock switch in the neutral position, select the DOOR LOCK from the BODY ELECTRICAL system select menu, and enter the DATA LIST.
5. Check the ON/OFF Information of the Driver's Door Lock Switch (LOCK) and Driver's Door Lock

Switch (UNLOCK).

Are both information indicators OFF?

YES - Go to step 6.

NO - Go to step 7.

6. Operate the driver's door lock switch in the LOCK and UNLOCK positions, and check the ON/OFF information of the Driver's Door Lock Switch (LOCK) and Driver's Door LOCK Switch (UNLOCK).

Are both Driver's Door LOCK Switch (LOCK) and Driver's Door LOCK Switch (UNLOCK) information indicators ON at the same time when the door lock switch is in the LOCK or UNLOCK position?

YES - Repair short between the wires.

NO - Replace the driver's MPCS unit.

7. Disconnect the driver's door lock switch 5P connector.
8. Check the ON/OFF information of the Driver's Door Lock Switch (LOCK) and Driver's Door Lock Switch (UNLOCK).

Are both information indicators OFF?

YES - Faulty driver's door lock switch.

NO - Go to step 9.

9. Disconnect driver's MPCS unit connector A (40P).
10. Check for continuity between body ground and the driver's door lock switch 5P connector No. 3 and No. 4 terminals individually.

DRIVER'S DOOR LOCK SWITCH 5P CONNECTOR

Wire side of female terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Replace the driver's MPCS unit.

DTC B2181: DRIVER'S DOOR LOCK KNOB SWITCH LOCK/UNLOCK SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Lock and unlock the driver's door with the door lock knob switch.
4. Check for DTCs with the HDS.

Is DTC B2181 indicated?

YES - Go to step 5.

NO - Intermittent failure, the driver's door lock knob switch system is OK at this time. Check for loose or poor connections.

5. Select DOOR LOCK from the BODY ELECTRICAL system select menu, and enter the DATA LIST.
6. Check the ON/OFF information of the Driver's Door Lock Knob Switch (LOCK) and Driver's Door Lock Knob Switch (UNLOCK) in the DATA LIST.

Does the Driver's Door Lock Knob Switch (LOCK) information indicate ON and Driver's Door Lock Knob Switch (UNLOCK) information indicate OFF with the door lock knob switch is in the LOCK position, and does the Driver's Door Lock Knob Switch (LOCK) information indicate OFF and Driver's Door Lock Knob Switch (UNLOCK) information indicate ON with the door lock knob switch is in the UNLOCK position?

YES - Replace the driver's MPCS unit.

NO - Go to step 7.

7. Disconnect the driver's door lock actuator 10P connector.
8. Check the ON/OFF information of the Driver's Door Knob Switch (LOCK) and Driver's Door Lock Knob Switch (UNLOCK) in the DATA LIST.

Are both information indicators OFF?

YES - Faulty driver's door lock knob switch; replace the driver's door lock actuator assembly.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Disconnect driver's MPCS unit connector A (40P).
11. Check for continuity between body ground and the driver's door lock actuator 10P connector No. 6 and No. 7 terminals individually, individually.

DRIVER'S DOOR LOCK ACTUATOR 10P CONNECTOR

Wire side of female terminals

Fig. 10: Identifying Continuity Between Driver'S Door Lock Actuator 10P Connector No. 6 And No. 7 Terminals And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Replace the driver's MPCS unit.

DTC B2186: FRONT PASSENGER'S DOOR LOCK SWITCH LOCK/UNLOCK SIGNAL ERROR

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in **B-CAN System Diagnosis Test Mode A** (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Lock and unlock the front passenger's door with the door lock switch.
4. Check for DTCs with the HDS.

Is DTC B2186 indicated?

YES - Go to step 5.

NO - Intermittent failure, the front passenger's door lock switch system is OK at this time. Check for loose or poor connections.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

5. With the front passenger's door lock switch in the neutral position, select the DOOR LOCK from the BODY ELECTRICAL system select menu, and enter the DATA LIST.
6. Check the ON/OFF information of the Front Passenger's Door Lock Switch (LOCK) and Front Passenger's Door Lock Switch (UNLOCK).

Are both information indicators OFF?

YES - Go to step 7.

NO - Go to step 8.

7. Operate the front passenger's door lock switch in the LOCK and UNLOCK positions, and check the ON/OFF information of the Front Passenger's Door Lock Switch (LOCK) and Front Passenger's Door Lock Switch (UNLOCK).

Are both the Front Passenger's Door Lock Switch (LOCK) and Front passenger's Door Lock Switch (UNLOCK) information indicators ON at the same time when the door lock switch is in the LOCK or UNLOCK position?

YES - Repair short between the wires.

NO - Replace the front passenger's MPCS unit.

8. Disconnect the front passenger's door lock switch 5P connector.
9. Check the ON/OFF information of the Front Passenger's Door Lock Switch (LOCK) and Front Passenger's Door Lock Switch (UNLOCK).

Are both information indicators OFF?

YES - Faulty front passenger's door lock switch; replace it.

NO - Go to step 10.

10. Turn the ignition switch to LOCK (0).
11. Disconnect front passenger's MPCS unit connector A (28P).
12. Check for continuity between body ground and the front passenger's door lock switch 5P connector No. 3 and No. 4 terminals individually.

FRONT PASSENGER'S DOOR
LOCK SWITCH 5P CONNECTOR

Wire side of female terminals

Fig. 11: Identifying Continuity Between Body Ground And Front Passenger's Door Lock Switch 5P Connector No. 3 And No. 4 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Replace the front passenger's MPCS unit.

SYMPTOM TROUBLESHOOTING

POWER DOOR LOCKS/KEYLESS

1. If the door lock system works properly, but the vehicle does not start, refer to the immobilizer-keyless control unit symptom troubleshooting information (see **SYMPTOM TROUBLESHOOTING INFORMATION**).

NOTE: All functions work with the key out of the ignition switch. Only the panic function will work with the key in the ignition switch and in the LOCK (0) position. There is no keyless function with the ignition turned ON (II).

POWER DOOR LOCKS/KEYLESS SYMPTOM TROUBLESHOOTING CHART

No.	Symptom	Check Items
1	The: doors will not lock or unlock. ⁽¹⁾	• MICU input test (see <u>CONTROL UNIT INPUT TEST</u>) • Driver's door key cylinder switch test (see <u>DOOR KEY CYLINDER SWITCH TEST</u>) • Door lock switch test (see <u>DOOR LOCK SWITCH TEST</u>) • Door lock knob switch test (see <u>DOOR LOCK KNOB SWITCH TEST</u>)
2	The doors will not lock. ⁽¹⁾	• MICU input test (see <u>CONTROL UNIT INPUT TEST</u>) • Door lock knob switch test (see <u>DOOR LOCK KNOB SWITCH TEST</u>)

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

		• Driver's door switch test (check the door switch ON/OFF information with the HDS)
3	The doors will not unlock. ⁽¹⁾	• MICU input test (see <u>CONTROL UNIT INPUT TEST</u>) • Driver's door lock knob switch test (see <u>DOOR LOCK KNOB SWITCH TEST</u>)
4	Keyless operation does not work (LOCK, UNLOCK, PANIC).	Symptom troubleshooting (see <u>KEYLESS OPERATION DOES NOT WORK (LOCK, UNLOCK, PANIC)</u>).
5	Doors will not unlock with the transmitter, but will unlock with the door switch.	Symptom troubleshooting (see <u>DOORS WILL NOT UNLOCK (OR LOCK) WITH THE TRANSMITTER, BUT WILL UNLOCK (LOCK) WITH THE DOOR SWITCH</u>).
6	Doors will not lock with the transmitter, but will lock with the door switch.	Symptom troubleshooting (see <u>DOORS WILL NOT UNLOCK (OR LOCK) WITH THE TRANSMITTER, BUT WILL UNLOCK (LOCK) WITH THE DOOR SWITCH</u>).
7	Doors automatically relock 30,60, or 90 seconds after being unlocked with the transmitter even though a door has been opened.	• Driver's door switch test. • Symptom troubleshooting (see <u>DOORS AUTOMATICALLY RELOCK 30,60, OR 90 SECONDS AFTER BEING UNLOCKED WITH THE TRANSMITTER EVEN THOUGH A DOOR HAS BEEN OPENED</u>).
8	The horn does not sound and/or the headlights do not flash when PANIC button on the transmitter pressed.	Symptom troubleshooting (see <u>THE HORN DOES NOT SOUND AND/OR THE HEADLIGHTS DO NOT FLASH WHEN THE PANIC BUTTON ON THE TRANSMITTER IS PRESSED</u>).
9	Keyless lock or unlock operation will work even though the ignition key is in the ignition switch.	Ignition key switch test (see <u>TEST</u>).

(1) If only one door is not working properly, check that door's lock actuator first, then check the other items listed in this table.

KEYLESS OPERATION DOES NOT WORK (LOCK, UNLOCK, PANIC)**NOTE:**

- Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.
- Before troubleshooting, do the keyless transmitter test (see **TRANSMITTER TEST/REPLACEMENT**).

1. Turn the ignition switch ON (II).
2. Try to start the engine.

Does the engine start?

YES - The immobilizer system is OK, go to step 3.

NO - Go to the immobilizer symptom troubleshooting (see **SYMPTOM TROUBLESHOOTING INDEX**).

3. Turn the ignition switch to LOCK (0).
4. Connect the HDS to the data link connector.
5. Close all doors, then turn the ignition switch ON (II).
6. Enter the BODY ELECTRICAL menu, and check the door switch parameters.

Do all door switches indicate OFF?

YES - Go to step 7.

NO - Faulty door switch, or shorted door switch wire. Repair as necessary.

7. Remove the ignition key from the ignition switch.
8. Measure the voltage between the immobilizer-keyless control unit 7P connector No. 1 terminal and body ground.

IMMOBILIZER-KEYLESS CONTROL UNIT 7P CONNECTOR

Wire side of female terminals

Fig. 12: Identifying Voltage Between Immobilizer-Keyless Control Unit 7P Connector No. 1 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 9.

NO - Check the No. 7 (10 A) fuse in the under-dash fuse/relay box. If the fuse is blown, replace the fuse and repair a short to ground in the wire. If the fuse is OK, repair open in the wire.

9. Disconnect the ignition key switch 6P connector.
10. At the ignition key switch side, check for continuity between the ignition key switch 6P connector No. 1 and No. 2 terminals.

IGNITION KEY SWITCH 6P CONNECTOR

Terminal side of male terminals

Fig. 13: Identifying Continuity Between Ignition Key Switch 6P Connector No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Faulty ignition key switch or short to ground, replace the steering lock assembly.

NO - Go to step 11.

11. Insert the ignition key into the ignition switch.
12. At the ignition key switch side, check for continuity between the ignition key switch 6P connector No. 1 and No. 2 terminals.

IGNITION KEY SWITCH 6P CONNECTOR

Terminal side of male terminals

Fig. 14: Identifying Continuity Between Ignition Key Switch 6P Connector No. 1 And No. 2 Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Faulty ignition key switch, replace the steering lock assembly.

13. Disconnect the immobilizer-keyless control unit 7P connector.
14. Check for continuity between the immobilizer-keyless control unit 7P connector No. 6 terminal and the

ignition key switch 6P connector No. 1 terminal.

IGNITION KEY SWITCH 6P CONNECTOR
Wire side of female terminals

IMMOBILIZER-KEYLESS CONTROL UNIT 7P CONNECTOR
Wire side of female terminals

Fig. 15: Identifying Continuity Between 7P Connector No. 6 Terminal And 6P Connector No. 1 Terminal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

is there continuity?

YES - Go to step 15.

NO - Repair an open in the wire.

15. Check for continuity between the immobilizer-keyless control unit 7P connector No. 6 terminal and body ground.

IMMOBILIZER-KEYLESS CONTROL UNIT 7P CONNECTOR

Wire side of female terminals

Fig. 16: Identifying Continuity Between Immobilizer-Keyless Control Unit 7P Connector No. 6 Terminal And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Replace the immobilizer-keyless control unit.

DOORS WILL NOT UNLOCK (OR LOCK) WITH THE TRANSMITTER, BUT WILL UNLOCK (LOCK) WITH THE DOOR SWITCH

NOTE: Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.

1. Turn the ignition switch to LOCK (0).
2. Remove the ignition key from the ignition switch.
3. Close and lock the doors.
4. Try to lock/unlock the doors with the keyless transmitter.

Do the door lock actuators work normally?

YES - Intermittent failure, the system is OK at this time.

NO - Go to step 5.

5. Open the driver's door.

Does the key-in reminder chime sound?

YES - Faulty ignition key switch, or short to ground on the ignition key switch PNK wire. Repair as necessary.

NO - Go to step 6.

6. Do the transmitter test (see **TRANSMITTER TEST/REPLACEMENT**).

Is the transmitter OK?

YES - Substitute a known-good MICU and recheck.

NO - Replace the transmitter.

THE HORN DOES NOT SOUND AND/OR THE HEADLIGHTS DO NOT FLASH WHEN THE PANIC BUTTON ON THE TRANSMITTER IS PRESSED

NOTE: Before troubleshooting, check the B-CAN DTCs. If any DTC is indicated, troubleshoot the indicated DTC first.

1. Press the PANIC button.

Does the horn sound?

YES - Go to step 3.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

NO - Go to step 2.

2. Press the horn button.

Do the horns sound?

YES - Go to step 3.

NO - Check the horn circuit.

3. Turn the headlight switch ON.

Do the headlights come on?

YES - Go to step 4.

NO - Check the lighting circuit.

4. Do the transmitter test (see **TRANSMITTER TEST/REPLACEMENT**).

Is the transmitter OK?

YES - Substitute a known-good MICU and recheck.

NO - Replace the transmitter.

DOORS AUTOMATICALLY RELOCK 30,60, OR 90 SECONDS AFTER BEING UNLOCKED WITH THE TRANSMITTER EVEN THOUGH A DOOR HAS BEEN OPENED

1. Turn the ceiling light switch to the DOOR position.
2. Turn the ignition switch ON (II).
3. Close all doors.
4. Watch the ceiling light and the door indicator on the gauge control module.

Does the ceiling light and door indicator go off?

YES - Go to step 5.

NO - Repair short to ground in the wire between the MICU and door switch.

5. Open and close each door one at a time.
6. Watch the ceiling light and the door indicator on the gauge control module.

Does the ceiling light and door indicator come on when the door is open, and go off when the door is closed?

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

YES - Substitute a known-good MICU and recheck. If the symptom goes away, replace the original MICU.

NO - Check for open in the wire between the MICU and the door switch. If the wire is OK, replace the door switch.

CONTROL UNIT INPUT TEST

NOTE: Before testing the keyless/power door locks/security system control unit, troubleshoot the multiplex integrated control unit first, using B-CAN system Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

MICU

1. Turn the ignition switch to LOCK (0).
2. Remove the left kick panel (see TRIM REMOVAL/INSTALLATION - DOOR AREAS).
3. Disconnect under-dash fuse/relay box connectors E, F, H, K, N, Q, and P.

NOTE: All connector views are wire side of female terminals.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

* Connector view shown rotated 180° from actual position in the under-dash fuse/relay box.

Fig. 17: Identifying Under-Dash Fuse/Relay Box Connectors E, F, H, K, N, Q, And P
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, make these input tests at the connectors.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 6.

CONTROL INPUT TEST REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
E2	BRN			• Faulty left rear door lock actuator

2008 Acura MDX

		Tailgate outer handle released	Measure the voltage to ground: There should be more than 5 V.	• Faulty tailgate outer handle switch • A short to ground in the wire
(1) Without power tailgate				

Driver's MPCS Unit

- Turn the ignition switch to LOCK (0).
- Remove the driver's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
- Disconnect driver's MPCS unit connectors A(40P) and B (14P).

Fig. 19: Identifying Driver'S MPCS Unit Connectors A(40P) And B (14P)
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary and recheck the system.
 - If the terminals look OK, go to step 17.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Keyless/Power Door Locks/Security System - MDX

17. With the connectors still disconnected, make these input tests at the connectors.

- If any test indicates a problem, find and correct the cause, then recheck the system.
- If all the input tests prove OK, go to step 18.

CONTROL INPUT TEST REFERENCE

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A8	GRY	Under all conditions	Check for continuity between the A8 terminal and the front passenger's MPCS unit connector A (28P) No. 4 terminal: There should be continuity.	• Faulty under-dash fuse/relay box • An open in the wire
			Check for continuity to ground: There should be no continuity.	• Faulty under-dash fuse/relay box • A short to ground in the wire

25. If multiple failures are found on more than one control unit, replace the under-dash fuse/relay box (includes the MICU) (see **REMOVAL AND INSTALLATION**). If input failures are related to a particular control unit, replace the control unit.

DOOR LOCK ACTUATOR TEST

DRIVER'S DOOR AND LEFT REAR DOOR

1. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the actuator (B).

NOTE: The illustration shows the driver's door.

Fig. 22: Identifying 10P Connector And Actuator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check actuator operation by connecting power and ground according to **Fig. 23**. To prevent damage to the actuator, apply battery voltage only momentarily.

Terminal Position	1	2
LOCK	⊕	⊖
UNLOCK	⊖	⊕

Fig. 23: Connecting Power And Ground Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the actuator does not operate as specified, replace it.

FRONT PASSENGER'S DOOR AND RIGHT REAR DOOR

1. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the actuator (B).

NOTE: The illustration shows the front passenger's door.

Fig. 24: Identifying 10P Connector And Actuator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check actuator operation by connecting power and ground according to **Fig. 25**. To prevent damage to the actuator, apply battery voltage only momentarily.

Terminal Position	3	4
LOCK	⊕	⊖
UNLOCK	⊖	⊕

Fig. 25: Connecting Power and Ground Chart

4. If the actuator does not operate as specified, replace it.

DOOR LOCK KNOB SWITCH TEST

DRIVER'S DOOR

1. Remove the driver's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the actuator (B).

Fig. 26: Identifying 10P Connector Terminals And Actuator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals.
 - There should be continuity between the No. 6 and No. 5 terminals when the door lock knob switch is in the LOCK position and no continuity when the switch is in the UNLOCK position.
 - There should be continuity between the No. 7 and No. 5 terminals when the door lock knob switch is in the UNLOCK position and no continuity when the switch is in the LOCK position.
4. If the continuity is not as specified, replace the door lock actuator.

PASSENGER DOORS

1. Remove the passenger's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the actuator (B).

NOTE: The illustration shows the front passenger's door.

Fig. 27: Identifying 10P Connector Terminals And Actuator
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals. There should be continuity between the No. 8 [No. 7] and No. 10 [No. 5] terminals when the door lock knob switch in the UNLOCK position and no continuity when the switch is in the LOCK position.

[] : Left rear door

4. If the continuity is not specified, replace the door lock actuator.

DOOR LOCK SWITCH TEST

1. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 5P connector (A), remove the two screws, then remove the door lock switch (B).

Fig. 28: Identifying 5P Connector Terminals And Door Lock Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals.
 - There should be continuity between the No. 5 and No. 4 terminals when the door lock switch is in the LOCK position.
 - There should be no continuity between the No. 5 and No. 4 terminals when the door lock switch is in the neutral position or UNLOCK position.
 - There should be continuity between the No. 5 and No. 3 terminals when the door lock switch is in the UNLOCK position.
 - There should be no continuity between the No. 5 and No. 3 terminals when the door lock switch is in the neutral position or LOCK position.
 - There should be continuity between the No. 2 (+) and No. 1 (-) terminals (bulb check).
4. If the continuity is not as specified, replace the bulb or switch.

DOOR KEY CYLINDER SWITCH TEST

1. Remove the driver's door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 10P connector (A) from the key cylinder switch (B).

Fig. 29: Identifying 5P Connector Terminals And Key Cylinder Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals.
 - There should be continuity between the No. 9 and No. 5 terminals when the door key cylinder switch is in LOCK position.
 - There should be no continuity between the No. 9 and No. 5 terminals when the door key cylinder switch is in the neutral or UNLOCK position.
 - There should be continuity between the No. 8 and No. 5 terminals when the door key cylinder switch is in UNLOCK position.
 - There should be no continuity between the No. 8 and No. 5 terminals when the door key cylinder switch is in the neutral or LOCK position.
4. If the continuity is not as specified, replace the door key cylinder assembly (see **FRONT DOOR OUTER HANDLE REPLACEMENT**).

HOOD SWITCH TEST

1. Open the hood.
2. Disconnect the 2P connector (A) from the hood switch (B).

Fig. 30: Identifying 2P Connector Terminals And Hood Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals.
 - There should be continuity between the No. 1 and No. 2 terminals when the hood is opened (latch released).
 - There should be no continuity between the No. 1 and No. 2 terminals when the hood is closed (latch pushed down).
4. If the continuity is not as specified, replace the hood latch (see **HOOD LATCH REPLACEMENT**).

KEYLESS BUZZER TEST/REPLACEMENT

1. Remove the rear bumper (see **REAR BUMPER REMOVAL/INSTALLATION**).
2. Disconnect the 2P connector (A) from the keyless buzzer (B).

Fig. 31: Identifying 2P Connector Terminals And Keyless Buzzer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the buzzer by connecting battery power to the No. 1 terminal and ground to the No. 2 terminal. The buzzer should sound.
4. If the buzzer does not sound, replace it.
5. Install the buzzer in the reverse order of removal.

TAILGATE RELEASE ACTUATOR TEST

WITHOUT POWER TAILGATE

1. Remove the tailgate trim panel (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
2. Disconnect the 2P connector (A) from the tailgate release actuator (B).

Fig. 32: Identifying 2P Connector Terminals And Tailgate Release Actuator
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check the actuator by connecting battery power to the No. 2 terminal and ground to the No. 1 terminal. To prevent damage to the actuator, apply battery voltage only momentarily.

The actuator should work.

4. If the actuator does not work, replace the tailgate latch assembly (see **TAILGATE LATCH REPLACEMENT**).

TAILGATE OUTER HANDLE SWITCH TEST/ REPLACEMENT

1. Remove the tailgate trim panel (see **TRIM REMOVAL/INSTALLATION - TAILGATE AREA**).
2. Disconnect the 3P connector (A) from the tailgate outer handle switch (B).

Fig. 33: Identifying 3P Connector Terminals And Tailgate Outer Handle Switch
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the tailgate outer handle switch 3P connector No. 2 and No. 3 terminals.
 - There should be continuity when the tailgate outer handle is pulled.
 - There should be no continuity when the tailgate outer handle is released.
4. If the continuity is not as specified, remove the two bolts and the tailgate outer handle switch (A).

Fig. 34: Identifying Tailgate Outer Handle Switch With Bolts
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the switch in the reverse order of removal.

TRANSMITTER TEST/REPLACEMENT

NOTE:

- If the doors unlock or lock with the transmitter, but the LED on the transmitter does not come on, the LED is faulty; replace the transmitter.
- If any door is open, you cannot lock the doors with the transmitter.
- If you unlocked the doors with the transmitter, but do not open any of the doors within 30,60, or 90 seconds, the doors relock automatically.
- The lock or unlock does not work with the transmitter if the ignition key is inserted in the ignition switch.

WITH HDS

1. Press the lock or unlock button five or six times to reset the transmitter.
 - If the locks work, the transmitter is OK.
 - If any of the transmitter buttons does not work, replace the transmitter, then register the transmitter (see **IMMOBILIZER KEY REGISTRATION**).
 - If the locks don't work, go to step 2.
2. Connect the HDS to the data link connector.
3. Select KEYLESS from the BODY ELECTRICAL menu, then enter the KEYLESS CHECK.

4. Press lock, unlock, trunk, or panic button and check the response on the screen of the HDS.

NOTE: The door lock actuators may or may not cycle when receiving input from the transmitter.

- If KEYLESS ENTRY TRANSMITTER CODE IS RECEIVED is indicated, the transmitter is OK.
 - If DIFFERENT KEYLESS ENTRY TRANSMITTER CODE IS RECEIVED is indicated, the transmitter is not registered to the vehicle, if necessary, manually reprogram the transmitter (see IMMOBILIZER KEY REGISTRATION).
 - If KEYLESS ENTRY TRANSMITTER CODE IS NOT RECEIVED is indicated, go to step 5.
5. Remove the transmitter cover (A) from the transmitter (B), and check for water damage.
 - If you find any water damage, replace the transmitter, then manually reprogram the transmitter (see IMMOBILIZER KEY REGISTRATION).
 - If there is no water damage, go to step 6.

Fig. 35: Identifying Transmitter Cover And Transmitter
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Replace the transmitter battery (A) with a new one, and press lock or unlock button and check the receive condition on the screen of the HDS.
 - If KEYLESS ENTRY TRANSMITTER CODE IS RECEIVED is indicated, the transmitter is OK.
 - If KEYLESS ENTRY TRANSMITTER CODE IS NOT RECEIVED is indicated, go to step 7.

Fig. 36: Identifying Transmitter Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Use a different known-good keyless transmitter assembly and repeat steps 3 and 4.

NOTE: The keyless transmitter does not need to be programmed to the vehicle for this test.

- If DIFFERENT KEYLESS ENTRY TRANSMITTER CODE IS RECEIVED is indicated, replace the keyless transmitter and manually reprogram the transmitter (see **IMMOBILIZER KEY REGISTRATION**).
- If KEYLESS ENTRY TRANSMITTER CODE IS NOT RECEIVED is indicated, the immobilizer-keyless control unit is faulty, replace it and do the immobilizer system registration (see **IMMOBILIZER KEY REGISTRATION**).

WITHOUT HDS

1. Start the engine.
 - If the engine does not start, go to the immobilizer system troubleshooting (see **SYMPTOM TROUBLESHOOTING**).
 - If the engine starts, go to step 2.
2. Press the lock or unlock button five or six times to reset the transmitter.
 - If the locks work, the transmitter is OK.
 - If the locks don't work, go to step 3.
3. Manually program the transmitter (see **IMMOBILIZER KEY REGISTRATION**). If the transmitter does not program, go to step 4.
4. Manually program a known-good transmitter.
 - If you can program the transmitter, replace the original transmitter.

- If you can not program the transmitter, replace the original transmitter, go to step 5.
5. Remove the transmitter cover (A) from the transmitter (B), and check for water damage.
- If you find any water damage, replace the transmitter.
 - If there is no water damage, go to step 6.

Fig. 37: Identifying Transmitter Cover And Transmitter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Replace the transmitter battery (A) with a new one, and try to lock and unlock the doors with the transmitter by pressing the lock or unlock button five or six times.
- If the doors lock and unlock, the transmitter is OK.
 - If the doors don't lock and unlock, the HDS will be required for further diagnosis.

Fig. 38: Identifying Transmitter Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LIFT AND SUPPORT POINTS

NOTE: If you are going to remove heavy components such as the suspension or the fuel tank from the rear of the vehicle, first support the front of the vehicle with tall safety stands. When substantial weight is removed from the rear of the vehicle, the center of gravity can change, causing the vehicle to tip forward on the lift.

VEHICLE LIFT

1. Position the lift blocks (A), under the vehicle's front support points (B) and rear support points (C).

Fig. 25: Identifying Vehicle Support Points
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Raise the lift a few inches, and rock the vehicle gently to be sure it is firmly supported.
3. Raise the lift to its full height, and inspect the vehicle support points for solid contact with the lift blocks.

SAFETY STANDS

To support the vehicle on safety stands, use the same support points (B and C) as for a vehicle lift. Always use safety stands when working on or under any vehicle that is supported only by a jack.

FLOOR JACK

1. When lifting the front of the vehicle, set the parking brake. When lifting the rear of the vehicle, put the shift lever in the P position.
2. Block the wheels that are not being lifted.
3. Position the floor jack under the front jacking bracket (A) or the rear jacking bracket (B). Center the jacking bracket on the jack lift platform (C) and jack up the vehicle high enough to fit the safety stands under it.

Fig. 26: Identifying Vehicle Support Points

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Position the safety stands under the support points and adjust them so the vehicle is level.
5. Lower the vehicle onto the stands.

ENGINE OIL LIFE/MAINTENANCE MINDER

NOTE: To determine the appropriate reset procedure, refer to ENGINE OIL LIFE/MAINTENANCE MINDER RESET INDEX. Only the vehicles listed in this index have an engine oil life or maintenance minder indicator.

ENGINE OIL LIFE/MAINTENANCE MINDER RESET INDEX

Model & Year	Reset Procedure
MDX	
2007-09	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 1</u>
RDX	
2007-08	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 3</u>
2009	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 4</u>
RL	
2005	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 6</u>
2006	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 2</u>
2007-09	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 4</u>
TL	
2004-06	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 2</u>
2007-09	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 5</u>
TSX	
2007-09	<u>ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 5</u>

ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 1

1. Turn ignition switch to ON (II) position.
2. If engine oil life is not displayed, press the SEL/RESET button on steering wheel repeatedly until the multi-information display shows blank, SH-AWD and tire pressure.
3. Press and hold SEL/RESET button for more than 10 seconds. The remaining engine oil life reset mode will be shown on multi-information display.

4. Select RESET by pressing INFO (up or down) button, then press the SEL/RESET button to reset the engine oil life display. The maintenance item code(s) will disappear, and engine oil life will reset to "100". If you want to cancel the oil life reset mode, select CANCEL.

ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 2

Resetting Multi-Information Display

1. Turn the ignition switch to ON (II).
2. Press the SELECT/RESET button repeatedly until the oil life is displayed (if more than 15%) or the maintenance message is displayed (if oil life is less than 15%).

NOTE: If you are resetting the display when the oil life is more than 15%, the maintenance message "SERVICE DUE SOON" will be displayed. Make sure the maintenance items requiring service have been performed before resetting this display.

3. Press and hold the SELECT/RESET button for 10 seconds until you see the maintenance message or "MAINTENANCE RESET". If the maintenance message is displayed, press and hold the SELECT/RESET button again for 10 seconds until you see "MAINTENANCE RESET".
 - To reset the display, press the SELECT/RESET button to select "OK". The next time the ignition switch is turned to "ON", the display will show "OIL LIFE 100%".
 - If you do not want to reset the display, press the <or> side of the INFO button to select "Cancel".

NOTE:

- If the required service is performed and the display is not reset or if the display is reset without performing the service, the system will not show the proper maintenance levels. This can lead to serious mechanical problems because there will be no record of when maintenance is needed.
- If the indicated maintenance service is not performed and the remaining engine oil life is less than 0 percent, "SERVICE PAST DUE" will display, have the service performed immediately and make sure to reset the display as previously described.

G00402110

Fig. 1: Pressing & Holding SELECT/RESET Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Maintenance Main Items

If the message "SERVICE DUE NOW" does not appear more than 12 months after the display is reset, change the engine oil every year.

NOTE:

- Independent of the maintenance messages in the Multi-information Display, replace the brake fluid every 3 years.
- Inspect idle speed every 160,000 miles (256,000 km).
- Adjust the valves during services A, B, 1, 2 or 3 if they are noisy.

2008 Acura MDX

GENERAL INFORMATION Service Reminder Indicators - Acura

Symbol	Maintenance Main Items
A	Replace engine oil Capacity: without oil filter: 4.0 ℓ (4.2 US qt).
B	Replace engine oil and oil filter (see page 8-6). Capacity: with oil filter: 4.3 ℓ (4.5 US qt).
	Rotate tires, and check tire inflation and condition. Follow the pattern shown in the Owner's Manual.
	Check front and rear brakes. • Check pads and discs for wear (thickness), damage, and cracks. • Check calipers for damage, leaks, and tightness of mount bolts.
	Check parking brake adjustment. Number of clicks (6 to 10) when the parking brake lever is pulled with 196 N (20 kgf, 44 lbf) of force.
	Visually inspect the following items: • Check for correct installation and position, check for cracks, deterioration, rust, and leaks. • Check tightness of screws, nuts, and joints. If necessary, retighten.
	Inspect tie rod ends, steering gearbox, and gearbox boots. • Check rack grease and steering linkage. • Check boots for damage and leaking grease. • Check fluid lines for damage and leaks.
	Inspect suspension components • Check bolts for tightness. • Check condition of ball joint boots for deterioration and damage.
	Inspect driveshaft boots. Check boots for cracks and boot bands for tightness.
	Inspect brake hoses and lines including VSA Check the master cylinder, and VSA modulator for damage and leakage.
	Inspect all fluid levels and condition of fluids. • Automatic transmission fluid (ATF-Z1). • Manual transmission fluid (MTF). • Clutch fluid . • Power steering fluid. • Brake fluid. • Windshield washer fluid. • Engine coolant.
	Inspect exhaust system. Check catalytic converter heat shields, exhaust pipes, and muffler for damage, leaks, and tightness.
	Inspect fuel lines and connections. Check for loose connections, cracks, and deterioration; retighten loose connections and replace damaged parts.

NOTE: According to state and federal regulations, failure to do the maintenance items marked with an asterisk (*) will not void the customer's emissions warranties. However, Honda recommends that all maintenance services be done at the recommended interval, to ensure long-term reliability.

Symbol	Maintenance sub Items
1	Rotate tires, and check tire inflation and condition. Follow the pattern shown in the Owner's Manual.
2	Replace air cleaner element. If you drive primarily in dusty conditions, replace every 15,000 miles (24,000 km). Replace dust and pollen filter. • Replace the filter at 15,000 miles (24,000) km intervals if the vehicle is driven mostly in urban areas that have high concentrations of soot in the air from industry and diesel-powered vehicles. • Replace the filter whenever airflow from the heating and cooling/climate control system is less than normal.
	Inspect drive belt. Look for cracks and damage, then check belt deflection by pushing on the belt about 98 N (10 kgf, 22 lbf) midway between the pulleys.
3	Replace automatic transmission fluid. • Driving in mountainous areas at very low vehicle speed requires transmission fluid changes more frequently than recommended by the Maintenance Minder. If you regularly drive your vehicle under this conditions, have the transmission fluid changed at 60,000 miles (96,000 km), then every 30,000 miles (48,000 km). • Capacity: 3.0 ℓ (3.2 US qt); use Honda ATF-Z1. Replace manual transmission fluid (see page 13-10). Capacity: 2.2 ℓ (2.3 US qt); use Honda MTF.
4	Replace spark plugs. Use IZFR6K-11 (NGK) or SKJ20DR-M11 (DENSO). Replace timing belt, if the vehicle is regularly driven in very high temperatures (over 110°F, 43°C), or in very low temperatures (under -20°F, -29°C), replace every 60,000 miles (U.S.)/ 100,000 km (Canada) and inspect water pump. Inspect the valve clearance (cold). • Otherwise adjust only if noisy. • Intake: 0.20—0.24 mm (0.008—0.009 in.); Exhaust: 0.28—0.32 mm (0.011—0.013 in.).
5	Replace engine coolant (see page 10-6). Capacity (including the reserve tank): M/T: 6.3 ℓ (6.7 US qt), A/T: 6.4 ℓ (6.8 US qt); use Honda All Season Antifreeze/Coolant Type 2.

G00402112

ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 3

With Technology Package

1. Turn ignition switch to ON (II) position.
2. Press the SEL/RESET knob on steering wheel until engine oil life is displayed.
3. Press and hold SEL/RESET knob for about 10 seconds. The remaining engine oil life reset mode will be shown on multi-information display.
4. Select RESET by pressing INFO (up or down) button, then press the SEL/RESET button to reset the engine oil life display. The maintenance item code(s) will disappear, and engine oil life will reset to "100". To cancel the oil life reset mode, select CANCEL.

Without Technology Package

1. Turn ignition switch to ON (II) position.
2. Press the Select/Reset knob repeatedly until engine oil life is displayed.
3. Press and hold Select/Reset knob for about 10 seconds. The engine oil life and maintenance item code(s)

will blink.

- 4. Press Select/Reset knob for another 5 seconds. The maintenance item code(s) will disappear, and engine oil life will reset to "100".

ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 4

- 1. Turn ignition switch to ON (II) position.
- 2. If engine oil life minder is not displayed, press the SEL/RESET button on steering wheel repeatedly until oil life minder is displayed.
- 3. To reset engine oil life, press the up or down arrow button on steering wheel to select RESET on display, and press SEL/RESET button. To cancel resetting the oil life reset mode, press the up or down arrow button on steering wheel to select CANCEL on display, and press SEL/RESET button.
- 4. If reset procedure is completed within 30 seconds after selecting the reset mode, the mode will be cancelled automatically.

ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 5

- 1. Ensure all doors are closed. Turn ignition switch to ON (II) position.
- 2. Press the INFO up or down arrow (located on steering wheel) repeatedly until engine oil life is displayed.
- 3. Press and hold the SEL/RESET button for 10 seconds. The multi-information display will ask for a confirmation. If you are sure you want to reset the display, press SEL/RESET button to select OK. If you do not want to reset the display, press the INFO up or down arrow button to select "Cancel".

ENGINE OIL LIFE/MAINTENANCE MINDER - PROCEDURE 6

- 1. Turn ignition switch to ON (II) position.
- 2. If the oil life minder is not displayed, press the SEL/RESET button on the steering wheel repeatedly until it is.
- 3. Press and hold the SEL/RESET button on the steering wheel for 10 seconds. The remaining engine oil life reset mode will be shown on the multi-information display.
- 4. To reset the engine oil life, press the UP or DOWN button on steering wheel to select RESET on the display, and press the SEL/RESET button.
- 5. To cancel resetting the oil life, press the UP or DOWN button on steering wheel to select CANCEL on the display, and press SEL/RESET button.

MAINTENANCE REQUIRED LIGHT

NOTE: To determine the appropriate reset procedure, refer to **MAINTENANCE REQUIRED LIGHT RESET INDEX**. Only the vehicles listed in this index have a **MAINTENANCE REQUIRED** light.

MAINTENANCE REQUIRED - PROCEDURE 1

1. For the first 6000 miles after completion of scheduled maintenance and indicator light reset, the MAINT REQD reminder light will illuminate for 2 seconds when ignition is turned to ON position. Between 6000-7500 miles, the MAINT REQD reminder light will illuminate for 2 seconds, then flash for 8 seconds, and then go out. After exceeding 7500 miles without having scheduled maintenance performed, light will remain on until it is reset.
2. When service has been completed, reset MAINT REQD reminder light. To reset light, ensure ignition switch is in OFF position. Turn ignition switch to ON position, with engine off. Push RESET button on maintenance reminder unit located behind lower dash cover and hold for 3 seconds. See **Fig. 4**. Turn

ignition switch to OFF position. Turn ignition switch to ON position and verify MAINT REQD light has been reset.

View from wire side

G00077867

Fig. 4: Locating Maintenance Reminder Unit (Integra)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. At each 7500 mile service interval, the MAINTENANCE REQUIRED light will change from Green to Yellow. If service is not performed (and light is not reset), the MAINTENANCE REQUIRED light will change from Yellow to Red.
2. When service has been completed, reset MAINTENANCE REQUIRED reminder light. To reset light, turn ignition ON. Push button located under dash to the right of steering column (above gas pedal) and hold for 3 seconds. Turn ignition OFF. Start engine and verify light has been reset.

MAINTENANCE REQUIRED - PROCEDURE 3

1. At each 7500 mile service interval, the MAINTENANCE REQUIRED light will change from Green to Yellow. If service is not performed (and light is not reset), the MAINTENANCE REQUIRED light will change from Yellow to Red.
2. When service has been completed, reset MAINTENANCE REQUIRED reminder light. To reset reminder light, turn ignition off. Insert ignition key in slot provided below tachometer. See **Fig. 5**.

Fig. 5: Resetting Maintenance Required Light
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MAINTENANCE REQUIRED - PROCEDURE 4

1. At 5900-6100 miles MAINT REQ'D light blinks for 10 seconds when the ignition switch is turned to ON (II) position. At 7400-7600 miles MAINT REQ'D light illuminates and stays on while ignition switch is in ON (II) position.
2. To reset MAINT REQ'D light, turn ignition switch to OFF position. Push and hold the Trip or Select and the reset buttons simultaneously. Turn ignition switch to ON (II) position, and continue to hold buttons for more than 10 seconds.

2008 Acura MDX

GENERAL INFORMATION Service Reminder Indicators - Acura

MAINTENANCE REQUIRED - PROCEDURE 5

1. For the first 6,000 miles after Maintenance Required Indicator is reset, will come on for 2 seconds when you turn ignition switch to ON (II). Between 6,000 and 7,500 miles, this indicator will light for 2 seconds when you first turn ignition switch to ON (II) and then flash for 10 seconds. If you exceed 7,500 miles without having scheduled maintenance preformed, this indicator will remain on as a constant reminder.
2. To reset, turn engine OFF. Press and hold Select and Reset buttons on instrument panel, then turn ignition switch to ON (II). Hold buttons for approximately 10 seconds until indicator goes off.

MAINTENANCE REQUIRED - PROCEDURE 6

1. For the first 8000 miles after completion of scheduled maintenance and indicator light reset, the MAINT REQ'D reminder light will illuminate for 2 seconds when ignition is turned to ON (II) position. Between 8000-10,000 miles, the MAINT REQ'D reminder light will illuminate for 2 seconds and then flash for 10 seconds, when ignition is turned on. After exceeding 10,000 miles without having scheduled maintenance performed, light will remain on until it is reset.
2. When service has been completed, reset MAINT REQ'D reminder light. To reset light, turn ignition switch to OFF position. Press and hold SELECT/RESET button located on right side of instrument cluster. While still holding button, turn ignition switch to ON (II) position, with engine off. Hold button until reminder light resets, after about 10 seconds.
3. If MAINT REQ'D reminder light does not reset, ensure headlights, parking lights, or both are turned off when resetting reminder light. The MAINT REQ'D indicator cannot be reset if any of these lights are on. If vehicle is equipped with daytime running lights and lights come on when ignition switch is turned to ON (II) position, daytime running lights must be disabled before indicator light can be reset.

SCHEDULED SERVICE DUE LIGHT

NOTE: To determine the appropriate reset procedure, refer to **SCHEDULED SERVICE DUE LIGHT RESET INDEX**. Only the vehicles listed in this index have a **SCHEDULED SERVICE DUE** light.

SCHEDULED SERVICE DUE LIGHT RESET INDEX

Model & Year	Reset Procedure
Legend	
1988-90	<u>SCHEDULED SERVICE DUE LIGHT - PROCEDURE 1</u>

SCHEDULED SERVICE DUE LIGHT - PROCEDURE 1

1. Every 7500 miles, a SCHEDULED SERVICE DUE warning light will illuminate as a reminder to change oil and oil filter. After servicing is completed, reset warning light.
2. To reset warning light, locate SERVICE RESET button. See **Fig. 6**. With ignition switch in the ON position, press SERVICE RESET button for 3 seconds. To verify reset, turn ignition switch off and on. Light should not come on.

Fig. 6: Identifying Scheduled Service Light Reset Button
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

TIRE PRESSURE MONITOR SYSTEM (TPMS)

NOTE: To determine the appropriate reset procedure, refer to TPMS RESET PROCEDURE INDEX. Only the vehicles listed in this index are equipped with tire pressure monitor system.

TPMS RESET PROCEDURE INDEX

TSX	
2007-09	<u>TPMS RESET - PROCEDURE 1</u>

TPMS RESET - PROCEDURE 1

Tire Pressure Monitor Warning Indicators

NOTE: Tire pressures will increase slightly as the temperature in the tires rises during driving at highway speeds. Pressures will also increase or decrease slightly with changes in outside air temperature. A temperature change of about 50°F (10°C) will change tire pressure by about 1.5 psi (10 kPa). If temperature drops

2008 Acura MDX

GENERAL INFORMATION Service Reminder Indicators - Acura

and then rises, tire pressure could decrease just enough to turn on the low pressure and tire(s) indicators, but later increase enough to turn them off. To resolve a complaint of such intermittent indications, confirm and clear the stored DTC(s) and check the tire pressures. Then explain to customer how temperature changes can affect the system, especially when tire pressures are near the low end of the TPMS normal range at around 24-32 psi (168-220 kPa).

NOTE: On models equipped with PAX tire systems, if a tire is repaired or replaced, the warning indicator (and the mileage counter that supports it) must be reset, no matter how far the vehicle was driven in the run flat mode. See appropriate manufacturer service information.

If low tire pressure indicator and multi-information display indicator(s) are lit continuously due to low pressure in one or more tires, adjust tire inflation to proper pressure as indicated on the tire and loading information placard. The light will remain on until tire pressure is properly set. If warning light is still illuminated or the TPMS indicator is lit continuously, there is a problem in the TPM system. Refer to manufacturer service information.

2008 Acura MDX

2007-09 MAINTENANCE Maintenance - MDX

2007-09 MAINTENANCE**Maintenance - MDX****LUBRICANTS AND FLUIDS**

For details of the lubrication points and type of lubricants to be applied, refer to the illustrated index and various work procedures (such as Assembly/Reassembly, Replacement, Overhaul, Installation, etc.) contained in each section.

LUBRICATION POINTS REFERENCE CHART

Item	Lubrication Points	Lubricant
A	Engine	Acura Motor Oil: American Honda P/N 08798-9023A (5W-20), Honda Canada P/N CA66806 (5W-20) Look for the API certification seal on the oil container as shown below. Make sure it says "For Gasoline Engines." SAE viscosity: See chart.
B	Automatic transmission	Acura Automatic Transmission Fluid (ATF-Z1): American Honda P/N 08200-9001A, Honda Canada P/N CA66689 Always use Acura ATF-Z1. Using a non-Acura ATF can affect shift quality.
C	Transfer assembly	Hypoid gear oil GL4 or GL5 Use a SAE 90 or SAE 80W-90 viscosity hypoid gear oil, API classified GL4 or GL5 only. Viscosity SAE 90: above 0°F (-18°C) SAE 80W-90: below 0°F (-18°C)
D	Rear differential	Acura Automatic Transmission Fluid (ATF-Z1): American Honda P/N 08200-9001 A, Honda Canada P/N CA66689
E	Brake system (including VSA lines)	Acura DOT 3 Brake Fluid: P/N 08798-9008A Always use Acura DOT 3 Brake Fluid. Using a non-Acura brake fluid can cause corrosion and decrease the life of the system.
F	Brake booster clevis pin	Multipurpose grease
G	Battery terminals	
H	Fuel fill door	
I	Hood hinges and hood latch	
J	Door hinges: upper and lower	
K	Tailgate hinges	
L	Caliper piston boot, caliper pins, and boots	Honda Silicone Grease: P/N 08C30-B0234M
		Acura Power Steering Fluid: P/N 08206-9002A

2008 Acura MDX

2007-09 MAINTENANCE Maintenance - MDX

M	Power steering system	Always use Acura Power Steering Fluid. Using any other type of power steering fluid or automatic transmission fluid can cause increased wear and poor steering in cold weather.
N	Air conditioning compressor	Compressor oil: DENSO ND-OIL 8 (P/N 38897-PR7-A01AH or 38899-PR7-A01) for refrigerant HFC-134a (R-134a)
O	Cooling system	Acura Long Life Antifreeze/Coolant Type 2

Fig. 1: Identifying API Certification Seal

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- Lubricate the following areas using the recommended lubricants and fluids.
- In corrosive areas, more frequent lubrication is necessary.

Fig. 2: Identifying Lubricate Applying Area

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GENERAL INFORMATION

MULTI-INFORMATION DISPLAY

The maintenance minder is an important feature of the multi-information display. Based on engine operating conditions and accumulated engine revolutions, the MDX's onboard computer (PCM) calculates the remaining engine oil and automatic transmission fluid life. The system also displays the codes for other scheduled maintenance items needing service.

Fig. 3: Screen Display - Multi-Information
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Service Information

1. The remaining engine oil life (A) is shown as a percentage on the multi-information display. To see the current engine oil life, turn the ignition switch to the ON (II) position, then push and release the Sel/Reset switch repeatedly until the engine oil life displays.

Fig. 4: Screen Display - Engine Oil Life

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. When the ignition switch is in the ON (II) position, and the remaining engine oil life is 6% to 15%, the remaining engine oil life and other scheduled maintenance item(s) needing service are displayed. The maintenance system message "SERVICE DUE SOON" (A) also come on. To cancel the message, press the Info button. The display continues to show the remaining engine oil life (B) and the message indicator (C) until it is reset.
 - Complete list of maintenance main items (D) (see MAINTENANCE MAIN ITEMS).
 - Complete list of maintenance sub items (E) (see MAINTENANCE SUB ITEMS).

Fig. 5: Screen Display - SERVICE DUE SOON

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. When the ignition switch is in the ON (II) position, and the remaining engine oil life is 1 % to 5 %, the maintenance system message "SERVICE DUE NOW" is displayed along with the same maintenance item code(s). If the maintenance system message display is cancelled, a "SERVICE" message appears.

Fig. 6: Screen Display - SERVICE DUE NOW

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. When the ignition switch is in the ON (II) position, and the remaining engine oil life is 0 %, the maintenance system message "SERVICE PAST DUE" is displayed along with the same maintenance item code(s).

**Fig. 7: Screen Display - SERVICE PAST DUE**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the indicated maintenance is not done, the "SERVICE PAST DUE" message shows a negative mileage, for example "-10," on the display. If the negative mileage is between 0 and -9, the message is displayed for only a few seconds when the ignition switch is turned to the ON (II) position. The negative mileage (A) remains displayed after the vehicle is driven more than 10 miles (for USA models) or 10 km (for Canada models) after 0 % oil life is reached, and the display cannot be cancelled. This means the indicated maintenance item(s) should have been done more than 10 miles (or 10 km) ago.

**Fig. 8: Screen Display - SERVICE PAST DUE**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

RESETTING THE MAINTENANCE INFORMATION DISPLAY

NOTE:

- The vehicle must be stopped to reset the display.
- If a required service is done and the display is not reset, or if the maintenance display is reset without doing the service, the system will not show the proper maintenance timing. This can lead to serious mechanical problems because there will be no accurate record of when the required maintenance is needed.
- The engine oil life and the maintenance items can be reset independently only with the HDS.

1. Turn the ignition switch to ON (II) position.
2. If system message(s) are displayed, press the Info switch to cancel the display.
3. Push and release the Sel/Reset switch repeatedly until the engine oil life indicator is displayed.
4. Press and hold the Sel/Reset switch for about 10 seconds, the "OIL LIFE RESET" mode display appears.

NOTE:

- If you are resetting the display when the engine oil life is more than 15 %, make sure any maintenance item(s) requiring service are done before resetting the display.
- To cancel the "OIL LIFE RESET" mode, press the Info switch repeatedly until the "CANCEL" indicator is displayed, then press the Sel/Reset switch.

Fig. 9: Screen Display - OIL LIFE RESET
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Press Info button repeatedly until the "RESET" indicator is displayed, then press the Sel/Reset switch.

The maintenance item code(s) will disappear, and the engine oil life will reset to "100 %."

Fig. 10: Screen Display - Oil Life
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RESETTING INDIVIDUAL MAINTENANCE ITEMS

1. Connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (See Page 11-3)
2. Turn the Ignition Switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the powertrain control module (PCM). If it does not communicate, troubleshoot the DLC circuit (see page 11-218)
4. Select BODY ELECTRICAL with the HDS.
5. Select ADJUSTMENT in the GAUGES MENU with the HDS.
6. Select RESET in the MAINTENANCE MINDER with the HDS.
7. Select the individual maintenance item you wish to reset.

MAINTENANCE MAIN ITEMS

2008 Acura MDX

2007-09 MAINTENANCE Maintenance - MDX

If the message "SERVICE DUE NOW" does not appear more than 12 months after the display is reset, change the engine oil every year.

NOTE:

- Replace the brake fluid every 3 years, independent of the maintenance messages in the multi-information display.
- Inspect idle speed every 160,000 miles (256,000 km).
- Adjust the valves during services A, B, 1, 2, or 3 if they are noisy.

MAINTENANCE MAIN ITEMS

Symbol	Maintenance Main Items
A	Replace engine oil (see <u>ENGINE OIL REPLACEMENT</u>). Engine oil capacity without oil filter: 4.0 L (4.2 US qt)
B	Replace engine oil and oil filter (see <u>ENGINE OIL FILTER REPLACEMENT</u>). Engine oil capacity with oil filter: 4.3 L (4.5 US qt)
	Check front and rear brakes (see <u>COMPONENT LOCATION INDEX</u>). • Check pads and discs for wear (thickness), damage, and cracks. • Check calipers for damage, leaks, and tightness of mounting bolts.
	Check parking brake adjustment (see <u>PARKING BRAKE INSPECTION AND ADJUSTMENT</u>). Number of clicks (9 to 11 when the parking brake pedal is pressed with 294 N (30 kgf, 66 lbf) of force
	Inspect tie-rod ends, steering gearbox, and gearbox boots (see <u>STEERING LINKAGE AND GEARBOX INSPECTION</u>). • Check rack grease and steering linkage. • Check boots for damage and leaking grease. • Check fluid lines for damage or leaks.
	Inspect suspension components (see <u>FRONT SUSPENSION</u>). • Check bolts for tightness. • Check condition of ball joint boots for deterioration and damage.
	Inspect driveshaft boots (see <u>DRIVESHAFT INSPECTION</u>). Check boots for cracks and boot bands for tightness.
	Inspect brake hoses and lines including VSA lines (see <u>BRAKE HOSE AND LINE INSPECTION</u>). Check the master cylinder and VSA modulator for damage and leakage.
	Inspect all fluid levels and condition of fluids. • Engine coolant (see <u>COOLANT CHECK</u>) • Automatic transmission fluid (see <u>ATF LEVEL CHECK</u>) • Rear differential fluid (see <u>REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT</u>)

2008 Acura MDX

2007-09 MAINTENANCE Maintenance - MDX

- Power steering fluid (see **FLUID REPLACEMENT**)
- Brake fluid (see **BRAKE SYSTEM BLEEDING**)
- Windshield washer fluid (see **REAR WINDOW WIPER MOTOR REPLACEMENT**)

Inspect exhaust system (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**)*.
Check catalytic converter heat shields, exhaust pipes, and muffler for damage, leaks, and tightness.

Inspect fuel lines (see **FUEL LINE INSPECTION**)*, and connections (see **FUEL LINE/QUICK-CONNECT FITTING PRECAUTIONS**)*.

Check for loose connections, cracks, and deterioration; retighten loose connections and replace damaged parts.

NOTE: According to state and federal regulations, failure to do the maintenance items marked with an asterisk (*) will not void the client's emissions warranties. However, Acura recommends that all maintenance services be done at the recommended interval, to ensure long-term reliability.

MAINTENANCE SUB ITEMS

MAINTENANCE SUB ITEMS CHART

Number	Maintenance Sub Items
1	Rotate tires, and check tire inflation and condition. Follow the pattern shown in the Owner's Manual.
2	Replace air cleaner element (see <u>AIR CLEANER ELEMENT INSPECTION/REPLACEMENT</u>). If the vehicle is regularly driven in dusty conditions, replace every 15,000 miles (24,000 km).
	Replace dust and pollen filter (see <u>DUST AND POLLEN FILTER REPLACEMENT</u>).
	• If the vehicle is driven mostly in areas that have high concentrations of dust, pollen, or soot in the air, replace the filter at 15,000 miles (24,000 km). • Replace the filter whenever airflow from the heating and air conditioning system is less than normal.
3	Inspect drive belt (see <u>DRIVE BELT INSPECTION</u>). Look for cracks and damage, and inspect auto tensioner; no adjustment is needed.
	Replace automatic transmission fluid (see <u>ATF REPLACEMENT</u>) and transfer fluid (see <u>TRANSFER ASSEMBLY FLUID REPLACEMENT</u>).
	• Automatic transmission fluid capacity: 2.8 L (3.0 US qt), use Acura ATF-Z1 • Transfer fluid capacity: 0.43 L (0.45 US qt), use hypoid gear oil GL4 or GL5
4	Replace spark plugs (see <u>SPARK PLUG INSPECTION</u>). Use IZFR5K11 (NGK) or SKJ20DR-M11 (DENSO).
	Replace timing belt (see <u>TIMING BELT REPLACEMENT</u>). If the vehicle is regularly driven in very high temperatures (over 110°F, 43°C), or in very low temperatures (under -20°F, -29°C), replace every 60,000 miles (USA)/100,000 km (Canada)

2008 Acura MDX

2007-09 MAINTENANCE Maintenance - MDX

	and inspect water pump (see <u>WATER PUMP INSPECTION</u>).
	Inspect the valve clearance (cold) (see <u>VALVE CLEARANCE ADJUSTMENT</u>). • Otherwise adjust only if noisy • Intake: 0.20-0.24 mm (0.008-0.009 in.). Exhaust: 0.28-0.32 mm (0.011-0.013 in.)
5	Replace engine coolant (see <u>COOLANT REPLACEMENT</u>). Capacity (including the reserve tank): 7.3 L (1.93 US gal), use Acura Long Life Antifreeze/Coolant Type 2
6	Replace rear differential fluid (see <u>REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT</u>). • Driving in mountainous areas at very low vehicle speeds or trailer towing results in higher level of mechanical (shear) stress to fluid. This requires differential fluid changes more frequently than recommended by the maintenance minder. If the vehicle is regularly driven in these conditions, have the differential fluid changed at 7,500 miles (12,000 km), then every 15,000 miles (24,000 km). • Capacity: Clutch chambers 2.53 L (2.67 US qt), use Acura ATF-Z1

2007-09 ACCESSORIES AND EQUIPMENT

Moonroof - MDX

COMPONENT LOCATION INDEX

**Fig. 1: Identifying Moonroof Component Location**

Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

CAVITY AND TEST CONDITION CHART

Symptom	Diagnostic procedure
Water leaks from moonroof	1. Check for a clogged drain tube. 2. Check for a gap between the glass weatherstrip and the roof panel. 3. Check for a defective or an improperly installed glass weatherstrip or drain channel. 4. Check for a gap between the drain seal and the roof panel.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Moonroof - MDX

Wind noise from moonroof	Check for excessive clearance between the glass weatherstrip and the roof panel.
Motor noise from moonroof	1. Check for a loose motor. 2. Check for a worn gear or bearing. 3. Check for a deformed cable assembly.
Moonroof glass does not move, but motor turns	1. Check for a defective gear or inner cable. 2. Check for foreign matter stuck between the guide rail and the slider. 3. Check for a loose inner cable. 4. Make sure the cable assembly is attached properly.
Moonroof glass does not move and motor does not turn (glass can be moved with 5 mm hexagonal wrench)	1. Check for a blown fuse. 2. Check for a faulty moonroof switch. 3. Check for a run down battery. 4. Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>). 5. Check for a defective motor control unit.
Moonroof glass does not stop at proper flush closed position.	• Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>). • Check glass position adjustment.
Moonroof glass moves in a jerking motion (moves 40mm (1.57 in.), stops for 0.4 seconds, and repeats)	Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>).
During auto close operation, moonroof glass reverses when no object is trapped	Check for dirt and debris in the track. Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>).
Moonroof glass moves, but there is no AUTO function	Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>).

CIRCUIT DIAGRAM

2007-09 ACCESSORIES AND EQUIPMENT Moonroof - MDX

- If the moonroof works OK manually, but will not work in AUTO, or reverses frequently (pinch detection) do the moonroof calibration (see **RESETTING THE MOONROOF CONTROL UNIT**) before proceeding with the input test.

1. Remove the headliner (see **HEADLINER REMOVAL/INSTALLATION**).
2. Close the driver's door, and keep it closed until the procedure is complete.
3. Turn the ignition switch to LOCK (0).
4. Disconnect the 10P connector (A) from the moonroof control unit (B).

Fig. 4: Identifying Moonroof Control Unit And 10P Connector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Inspect the connector and socket terminals to be sure they are all making good contact.
 - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
 - If the terminals look OK, go to step 6.
6. With the connector still disconnected, make these input tests at the connector.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 7.

CAVITY AND TEST CONDITION CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
4	GRY	Under all conditions	Check for continuity between the No. 4 terminal and the under-dash fuse/relay box connector X (39P) No. 15 terminal, and the No. 4 terminal and the front passenger's MPCS unit connector A (28P) No. 4 terminal: There should be continuity.	An open in the wire

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Moonroof - MDX

7. Reconnect the connector, and make these input tests at the connector.
 - If any test indicates a problem, find and correct the cause, then recheck the system.
 - If all the input tests prove OK, go to step 8.

CAVITY AND TEST CONDITION CHART

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
10	BLK	Under all conditions	Measure the voltage to ground: There should be less than 0.5 V.	• Poor ground (G501) • An open in the wire
1	GRN	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 2 (OP1) (40 A) fuse in the main under-hood fuse box • Blown No. 3⁽¹⁾ fuse in the under-dash fuse/relay box • An open in the wire
6	LT GRN	Moon roof switch in AUTO OPEN or AUTO CLOSE position	Measure the voltage to ground: There should be battery voltage.	• Blown No. 4 (40 A) fuse in the main under-hood fuse box • Blown No. 6 (7.5 A) fuse in the under-dash fuse/relay box • Faulty under-dash fuse/relay box • Faulty moonroof switch • An open in the wire
7	ORN	Moon roof switch in TILT position	Measure the voltage to ground: There should be battery voltage.	
8	PNK	Moon roof switch in CLOSE position	Measure the voltage to ground: There should be battery voltage.	
9	LT BLU	Moonroof switch in OPEN position	Measure the voltage to ground: There should be battery voltage.	
(1) No. 3 (10 A): '07 model No. 3 (15 A): '08 model				

8. If all the input tests are OK and multiple failures are found, replace the moonroof control unit/motor assembly. If the problem is related to the key-off operation, go to the driver's MPCS unit input test (see **DRIVER'S MPCS UNIT INPUT TEST**), and front passenger's MPCS unit input test (see **FRONT PASSENGER'S MPCS UNIT INPUT TEST**).

MOONROOF SWITCH TEST/REPLACEMENT

Special Tools required

KTC trim tool set SOJATP2014

NOTE:

- Use the appropriate tool from the KTC trim tool set to avoid damaging

components.

- Take care not to scratch the roof console and related parts.
- The moonroof can still be operated for about 10 minutes after the ignition switch is turned from the "II" to the "I" or "0" positions, as long as none of the doors have been opened. This provides a convenience to parked occupants while offering a degree of security against unwanted or accidental moonroof operation.

1. Carefully pry the moonroof switch (A) out of the roof console.

Fig. 5: Identifying Moonroof Switch Of Roof Console
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the 7P connector (B) from the moonroof switch.
3. Check for continuity between the terminals in each switch position according to **Fig. 6**.

Terminal Position	1	2	3	6	7	4	5
OPEN	○				○		
CLOSE	○		○				
TILT	○	○				○	○
CLOSE+AUTO	○		○	○			
OPEN+AUTO	○			○	○		

Fig. 6: Checking For Continuity Between Terminals In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, replace the illumination bulb (C) or the switch.
5. Install in the reverse order of removal.

RESETTING THE MOONROOF CONTROL UNIT

NOTE: Do the moonroof control unit reset with all the doors and tailgate closed.

Resetting the moonroof is required when any of the following have occurred.

- The moonroof was moved manually with the battery dead or disconnected.
- The moonroof motor was replaced with a new one.
- Any components related to the moonroof were replaced. -Wind deflector
 - Moonroof glass
 - Moonroof seal
 - Moonroof glass bracket
 - Moonroof cables, etc.

To reset the moonroof control unit, do these steps

1. Close all the doors and the tailgate.
2. Turn the ignition switch to LOCK (0).
3. Press and hold the center of the moonroof switch (tilt), and turn the ignition switch ON (II).
4. Release the moonroof switch and turn the ignition switch to LOCK (0).
5. Repeat steps 3 and 4 an additional four times.
6. Pull and hold the moonroof switch (open) an additional 3 seconds after the moonroof is fully opened.
7. Press and hold the moonroof switch (close) an additional 3 seconds after the moonroof is fully closed.
8. Confirm that the moonroof control unit is reset by using the moonroof AUTO OPEN and AUTO CLOSE function.

2007-09 ACCESSORIES AND EQUIPMENT

Moonroof - MDX

COMPONENT LOCATION INDEX

SYMPTOM TROUBLESHOOTING INDEX

SYMPTOM TROUBLESHOOTING INDEX

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Moonroof - MDX

Symptom	Diagnostic procedure
Water leaks from moonroof	1. Check for a clogged drain tube. 2. Check for a gap between the glass weatherstrip and the roof panel. 3. Check for a defective or an improperly installed glass weatherstrip or drain channel. 4. Check for a gap between the drain seal and the roof panel.
Wind noise from moonroof	Check for excessive clearance between the glass weatherstrip and the roof panel.
Motor noise from moonroof	1. Check for a loose motor. 2. Check for a worn gear or bearing. 3. Check for a deformed cable assembly.
Moonroof glass does not move, but motor turns	1. Check for a defective gear or inner cable. 2. Check for foreign matter stuck between the guide rail and the slider. 3. Check for a loose inner cable. 4. Make sure the cable assembly is attached properly.
Moonroof glass does not move and motor does not turn (glass can be moved with 5 mm hexagonal wrench)	1. Check for a blown fuse. 2. Check for a faulty moonroof switch. 3. Check for a run down battery. 4. Check for a defective motor control unit.
Moonroof glass does not stop at proper flush closed position	1. Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>). 2. Check glass position adjustment.
Moonroof glass moves in a jerking motion (moves 40 mm (1.57 in.), stops for 0.4 seconds, and repeats)	Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>).
During auto close operation, moonroof glass reverses when no object is trapped	Check for dirt and debris in the track. Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>).
Moonroof glass moves, but there is no AUTO function	Reset the moonroof control unit (see <u>RESETTING THE MOONROOF CONTROL UNIT</u>).

GLASS POSITION ADJUSTMENT

The roof panel (A) should be even with the glass weatherstrip (B), to within 0+1/-1 mm (0+0.04/-0.04 in.) all the way around. If not, make the following adjustment:

Fig. 2: Identifying Roof Panel And Glass Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove the bracket cover.
2. With a TORX T25 bit, loosen the bolts on each side, and adjust the glass (A).

Fig. 3: Identifying Glass Bolts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, repeat on the opposite side.

GLASS REPLACEMENT

1. Tilt the glass all the way up.
2. Slide the sunshade all the way back.
3. Pry out the cap (A), remove the screws (B), release the hooks (C), and remove the bracket cover (D). Repeat on opposite side. Use a TORX T25 bit to remove the bolts (E) from the glass brackets (F) on both sides.

Fig. 4: Identifying Cap, Screws, Hooks And Bracket Cover With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the glass (A) by lifting it up. Do not damage the roof panel.

Fig. 5: Identifying Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the glass in the reverse order of removal, and note these items:
 - Apply medium strength type liquid thread lock to the glass mounting bolts before reinstallation.
 - Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).
 - Adjust the glass position alignment (see **GLASS POSITION ADJUSTMENT**).
6. Check for water leaks. Use free-flowing water from a hose without a nozzle. Do not use high-pressure water.

NOTE: It is normal for some water to seep past the moonroof into the moonroof frame, and exit through the drains.

WIND DEFLECTOR REPLACEMENT

1. Open the glass fully.
2. Disconnect the deflector springs (A) from the bushings (B) on both sides.

Fig. 6: Identifying Deflector Springs And Bushings
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the wind deflector (A). A.

Fig. 7: Identifying Wind Deflector
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the deflector in the reverse order of removal.
5. Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).

DRAIN CHANNEL REPLACEMENT

1. Remove the glass (see **GLASS REPLACEMENT**).
2. Move both glass brackets (A) to the position where the moonroof normally pivots down, and remove the screws securing the drain channel (B).

Fig. 8: Identifying Glass Brackets And Drain Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the drain channel (A) from both hooks (B) of the drain channel slider by pulling the drain channel forward.

Fig. 9: Identifying Drain Channel And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the drain channel (A).

Fig. 10: Identifying Drain Channel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the channel in the reverse order of removal, and note these items:
 - Push the drain channel onto the hooks until a faint click is heard.
 - Check the glass position adjustment (see GLASS POSITION ADJUSTMENT).
6. Reset the moonroof control unit (see RESETTING THE MOONROOF CONTROL UNIT).
7. Check for water leaks. Let the water run freely from a hose without a nozzle. Do not use a high-pressure spray.

SUNSHADE REPLACEMENT

1. Remove the drain channel (see DRAIN CHANNEL REPLACEMENT).
2. Slide the sunshade all the way forward.
3. Disconnect both drain channel rods (A) from both glass brackets (B) by pulling the front of them inside, then remove the rods from both drain channel sliders (C) by lifting them up.

Fig. 11: Identifying Drain Channel Rods, Glass Brackets And Drain Channel Sliders

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide both drain channel sliders (A) forward until they contact both glass brackets (B).

Fig. 12: Identifying Drain Channel Sliders And Glass Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the screws, then remove both sunshade slider spacers (A).

Fig. 13: Identifying Sunshade Slider Spacers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. While lifting the front portion of the sunshade (A), move the sunshade forward until you can see both sunshade rear hooks (B). Do not damage the sunshade and hooks.

Fastener Locations

► : Screw, 4

Fig. 14: Identifying Sunshade And Sunshade Rear Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the screws, then remove both hooks.
8. Remove the sunshade (A).

Fig. 15: Identifying Sunshade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove both front sunshade base sliders (A) and both rear sunshade base sliders (B).

Fig. 16: Identifying Front Sunshade Base Sliders And Rear Sunshade Base Sliders

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the sunshade in the reverse order of removal, and check the glass position adjustment (see GLASS POSITION ADJUSTMENT).
11. Reset the moonroof control unit (see RESETTING THE MOONROOF CONTROL UNIT).
12. Check for water leaks. Let the water run freely from a hose without a nozzle. Do not use a high-pressure spray.

MOTOR REPLACEMENT

1. Remove these items:
 - Roof console (see INTERIOR LIGHT SWITCH TEST/REPLACEMENT)
 - Roof console bezel (see step 2 on HEADLINER REMOVAL/INSTALLATION)
2. Put on gloves to protect your hands. Disconnect the connector (A), and remove the bolts, then remove the motor (B).

Fig. 17: Identifying Connector And Motor With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal, and note these items:
 - Make sure the connector is plugged in properly.
 - Reset the moonroof control unit (see RESETTING THE MOONROOF CONTROL UNIT).
 - Check the motor operation.

FRAME AND DRAIN TUBE REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX) and the precautions and procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or service.

1. Remove these items:
 - Headliner (see **HEADLINER REMOVAL/INSTALLATION**)
 - Moonroof glass (see **GLASS REPLACEMENT**)
 - With rear entertainment system: Rear controller and screen (see **REAR CONTROLLER AND SCREEN REMOVAL/INSTALLATION**)
2. Put on gloves to protect your hands. Disconnect the motor connector (A), and detach the moonroof wire harness connector (B) from the moonroof frame.

Fig. 18: Identifying Motor Connector And Moonroof Wire Harness Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the drain tubes (A).

Fig. 19: Identifying Drain Tubes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With an assistant holding the frame (A), remove the bolts and release the rear middle drain tube clip (B), then remove the frame.

Fastener Locations

► : Bolt, 8

Fig. 20: Identifying Frame And Rear Middle Drain Tube Clip With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Front drain tube

5. Remove these items:
 - Front door sill trim (see TRIM REMOVAL/INSTALLATION - DOOR AREAS)
 - Kick panel (see TRIM REMOVAL/INSTALLATION - DOOR AREAS)
 - Driver's dashboard undercover (see DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION)
 - Passenger's dashboard undercover (see PASSENGER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION)
6. Passenger's side: Remove the glove box damper from the pivot on the glove box (see step 3 on GLOVE BOX REMOVAL/INSTALLATION). While holding the glove box, release the glove box stop on each side from the dashboard by pushing them in, then lower the glove box (see step 6 on GLOVE BOX REMOVAL/INSTALLATION).
7. Driver's side: Remove the bolts, then move the under-dash fuse/relay box (A) as needed.

Fastener Locations

► : Bolt, 2

Fig. 21: Identifying Under-Dash Fuse/Relay Box With Torque Specificaiton
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. To remove a front drain valve (A) from the body, tie a string to the top end of the drain tube, then pull the front drain tube (B) down out of the A-pillar. Leave the string in the pillar to use when reinstalling the drain tube.

Fig. 22: Identifying Front Drain Valve And Front Drain Tube
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Drain Tube

9. Remove these items:
 - Rear side trim panel (see **TRIM REMOVAL/INSTALLATION - REAR SIDE AREA**)
 - Left side: Subwoofer box (see **SUBWOOFER/AMPLIFIER UNIT (WITH NAVIGATION)**)
10. Tie a string to the top end of the rear drain tube (A), then pull the drain tube down out of the pillar. Leave the string in the pillar to use when reinstalling the drain tube.

Fig. 23: Identifying Rear Drain Tube

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the frame and drain tube in the reverse order of removal, and note these items:
- Before installing the frame, clear the drain tubes and drain valves using compressed air.
 - When installing, tie the string that was left in the pillar to the top end of the new drain tube and pull it up into the roof.
 - Check the frame seal.
 - Clean the surface of the frame.
 - Make sure the connectors are plugged in properly.
 - When connecting the drain tube, slide it over the frame nozzle at least 10 mm (0.39 in.).
 - Install the tube clip (A) on the drain tube (B) as shown.
 - After all parts are installed, including the headliner, reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).
 - Adjust the glass position alignment (see **GLASS POSITION ADJUSTMENT**).

Fig. 24: Identifying Tube Clip And Drain Tube

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check for water leaks. Let the water run freely from a hose without a nozzle. Do not use a high-pressure spray.

DRAIN CHANNEL SLIDER AND CABLE ASSEMBLY REPLACEMENT

1. Remove the frame (see **FRAME AND DRAIN TUBE REPLACEMENT**).
2. Remove these parts from the frame:
 - Sunshade (see **SUNSHADE REPLACEMENT**)
 - Moonroof motor (see **MOTOR REPLACEMENT**)
3. Disconnect and remove the rear middle drain tube (A).

Fig. 25: Identifying Rear Middle Drain Tube

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Put on gloves to protect your hands. Remove the screw securing the sunshade rear stop (A), and remove it from the frame (B). Release the rear hook of the slide stop (C) by pushing it forward, and pivot the stop up.

Fastener Location

►: Screw, 1

Fig. 26: Identifying Sunshade Rear Stop, Frame And Rear Hook Of Slide Stop

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the slide stop (A) and the drain channel slider (B).

Fig. 27: Identifying Slide Stop And Drain Channel Slider
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pivot the glass bracket (A) down by sliding the link lifter (B) back, then slide the glass bracket back with the link lifter.

Fig. 28: Identifying Glass Bracket And Link Lifter
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Slide the glass bracket (A) along with the cable (B) back, then remove them from the frame (C).

Fig. 29: Identifying Glass Bracket, Cable And Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the slider and cable assembly in the reverse order of removal, and note these items:
 - Damaged parts should be replaced.
 - Apply molybdenum grease to the glass bracket (A) and guide rail portion of the frame (B) indicated by the arrows.
 - Before reinstalling the motor, make sure both link lifters are parallel, and in the tilt-up position.
 - Before reinstalling the motor, install the frame and glass, then check the opening drag (see **CLOSING FORCE AND OPENING DRAG CHECK**).
 - After reinstalling the motor reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).

Fig. 30: Identifying Glass Bracket And Guide Rail Portion Of Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CLOSING FORCE AND OPENING DRAG CHECK

1. Remove the headliner (see **HEADLINER REMOVAL/INSTALLATION**).
2. Closing force check:
 - With a shop towel (A) on the leading edge of the glass (B), attach a spring scale (C) as shown.
 - Have an assistant hold the switch to close the glass while you measure the force required to stop it.
 - Read the force as soon as the glass stops moving, then immediately release the switch and spring scale.

Closing force: 200-290 N (20-30 kgf, 44-66 lbf)

Fig. 31: Identifying Shop Towel, Glass And Spring Scale
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the force is not within specification, remove the moonroof motor (see **MOTOR REPLACEMENT**), then check:
 - The gear teeth and the inner cable for breakage and damage. If the gear teeth are broken, replace the motor. If the inner cable is damaged, remove the frame (see **FRAME AND DRAIN TUBE REPLACEMENT**), and replace the cable (see **DRAIN CHANNEL SLIDER AND CABLE ASSEMBLY REPLACEMENT**).
 - Do the moonroof control unit input test (see **MOONROOF CONTROL UNIT INPUT TEST**). If the motor fails to run or doesn't turn smoothly, replace it.
 - The opening drag. Go to step 4.
4. Opening drag check: Protect the leading edge of the glass with a shop towel (A). Measure the effort required to open the glass using a spring scale (B) as shown.

Fig. 32: Identifying Shop Towel, Glass And Spring Scale
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the load is over 40 N (4 kgf, 9 lbf), check:
 - The side clearance and glass position adjustment (see **GLASS POSITION ADJUSTMENT**).
 - For broken or damaged sliding parts. If any sliding parts are damaged, replace them.
6. Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**) after reinstalling the moonroof motor.

2007-09 ACCESSORIES AND EQUIPMENT

Multiplex Integrated Control System - MDX

COMPONENT LOCATION INDEX

Fig. 1: Identifying Multiplex Integrated Control System Component Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GENERAL TROUBLESHOOTING INFORMATION

TROUBLESHOOTING CAN CIRCUIT RELATED PROBLEMS

NOTE: Check the powertrain control module (PCM) for DTCs and troubleshoot PCM (see GENERAL TROUBLESHOOTING INFORMATION) or F-CAN loss of communication errors first.

Using the HDS (Preferred method)

1. Go to **B-CAN SYSTEM DIAGNOSIS TEST MODE A** to check for "Connected units" and DTCs .
2. If no DTCs are retrieved, go to **B-CAN SYSTEM DIAGNOSIS TEST MODE C** or **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE D** .

Without HDS (Use only if the HDS is unavailable)

1. Check for communication circuit problems using B-CAN System Diagnostic Test (see **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A**).
2. Check for DTCs.
3. Sort, and then troubleshoot the DTCs in this order:
 1. Battery voltage DTCs
 2. Internal error DTCs
 3. Loss of communication DTCs (beginning with the lowest number first; for example, if B1008 and B1011 are retrieved, troubleshoot B1008 first). Refer to loss of communication cross reference chart.
 4. Signal error DTCs
4. If no DTCs are retrieved, use B-CAN System Diagnostic Test Mode 2 to check all inputs related to the failure (see step 10 on **TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE 1 AND TEST MODE 2 (WITHOUT THE HDS)**).

How to display DTCs on the gauge control module

1. Set the multiplex in Test Mode 1 (see **TEST MODE 1**).
2. While in Test Mode 1, the DTCs which have been detected and stored individually by various B-CAN units, will be shown one by one on the multi-information display on the gauge control module when the communication between the MICU and the gauge control module is normal. To scroll through the DTCs, press the select/reset button.

Fig. 2: Gauge Control Module DTCS Display
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

3. The unit that has stored the code can be identified by the number shown on the multi-information display (MID).

MULTI-INFORMATION DISPLAY (MID) CODE REFERENCE

Unit	Code (Control Unit I.D. Number)
MICU	10
Relay control module	11
Rear MICU	12
Power tailgate control unit	31
Driver's MPCS unit	35
Gauge control module	50
Climate control unit	51
Combination switch control unit	70
HandsFreeLink control unit	94
Power seat control unit	95
Immobilizer-keyless control unit	96
AcuraLink control unit (XM receiver)	97

How to clear the DTC

While in DTC indication status, press and hold down the select/reset button for more than 10 seconds.

Loss of Communication DTC cross-reference chart

When an electronic control unit (ECU) is unable to communicate with the other ECUs on the CAN circuit, the other control units will set loss of communication DTCs. Use this chart to find the control unit that is not communicating.

1. Find the Transmitting Control Unit that is in the same row as all of the loss of communication DTCs retrieved.
2. Do the input test for the transmitting control unit.

SYSTEM DESCRIPTION

MICU CONTROL FUNCTIONS

The MICU (built into the under-dash fuse/relay box) is one of the B-CAN system components. The MICU controls many systems related to the body controller area and security system, and also works as a gateway to diagnose the other B-CAN connected ECUs with the HDS.

The MICU also controls the function of these circuits:

Refer to each system circuit diagram for details.

- Entry lights control (individual map lights and ceiling light)
- Exterior lights control (including the daytime running lights control and back-up lights)
- Interlock system
- Keyless entry
- Power door locks
- Security alarm
- Turn signal/hazard warning lights
- Tailgate actuator
- Automatic lighting
- Impact sensing door lock release
- Door mirror switch

- IMOCD(S-NET)

Body Controller Area Network (B-CAN) and Fast Controller Area Network (F-CAN)

The body controller area network (B-CAN) and the fast controller area network (F-CAN) share information between multiple electronic control units (ECUs). B-CAN communication moves at a slower speed (33.33 kbps) for convenience related items and for other functions. F-CAN information moves at a faster speed (500 kbps) for "real time" functions such as fuel and emissions data. To allow both systems to share information, the gauge control module translates information from B-CAN to F-CAN and from F-CAN to B-CAN.

Fig. 3: Body Controller Area Network (B-Can) And Fast Controller Area Network (F-CAN) Diagram
 Courtesy of AMERICAN HONDA MOTOR CO., INC.

- The single wire method is used between the units not requiring the communication to move at a fast

speed.

- Using a single wire method reduces the number of the wires used on the body controller area network.

GATEWAY FUNCTION

The gauge control module acts as a gateway to allow both systems to share information, the gauge control module translates information from B-CAN to F-CAN and from F-CAN to B-CAN.

Fig. 4: Gateway Function Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

NETWORK "LOSS OF COMMUNICATION" ERROR CHECKING FUNCTION

The ECUs on the CAN circuit send messages to each other. If there are any malfunctions on the network, the odo/trip display on the gauge control module can indicate the error messages by entering the gauge self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**). There are three types of messages as follows:

Error Code List

ERROR CODE LIST

Error code	Type of communication line(s) error
Error 1	F-CAN communication
Error 2	B-CAN communication
Error 12	F-CAN and B-CAN communication

Example: Error 1

Fig. 5: Error Message Display

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Self-diagnostic Function

By connecting the HDS to the data link connector (DLC), the HDS can retrieve the diagnostic results from the MICU via a diagnostic BUS called the K-LINE. The K-LINE is different from the CAN line, and connected to the CAN related ECUs. The MICU is a gateway between the HDS and B-CAN related ECUs, and sends B-CAN diagnostic results to the HDS. When performing a function test with the HDS, the HDS sends an output signal through the K-LINE to the MICU. The MICU either relays the request to another ECU, or commands the function itself.

Fig. 6: Self-Diagnostic Block Diagram

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Wake-up and Sleep Function

The multiplex integrated control system has "wake-up" and "sleep" functions to decrease parasitic draw on the battery when the ignition switch is in LOCK (0) position.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

- In the sleep mode, the MICU stops functioning (communication and CPU control) when it is not necessary for the system to operate.
- As soon as any operation is requested (for example, a door is unlocked), the related control unit in the sleep mode immediately wakes up and begins to function.
- When the ignition switch is turned to LOCK (0), and the driver's door is opened, then closed, there is a delay about 40 seconds before the control unit goes from the wake-up mode to the sleep mode.
- The sleep mode will not function if any door is opened or if the ignition switch is turned ON (II).
- The draw is reduced from 2.6 A to less than 35 mA when in the sleep mode.

NOTE: **Sleep and Wake-up Mode Test (see SLEEP AND WAKE-UP MODE TEST).**

Fail-safe Function

To prevent improper operation, the MICU has a fail-safe function. In the fail-safe mode, the output signal is fixed when any part of the system malfunctions (for example, a faulty control unit or communication line).

Each control unit has a hardware fail-safe function that fixes the output signal when there is a CPU malfunction, and a software fail-safe function that ignores the signal from a malfunctioning control unit, which allows the system to operate normally.

Hardware Fail-safe Control

Fail-safe function

When a CPU problem or a abnormal power supply voltage is detected, the MICU moves to the hardware fail-safe mode, and each system output load is set to the pre-programmed fail-safe value.

Software Fail-safe Control

When any of the data from the B-CAN circuit cannot be received within a specified time, or an unusual combination of the data is recognized, the MICU moves to the software fail-safe mode. The data that cannot be received is forced to a pre-programmed value.

Power Supply Voltage Monitoring Function

The MICU monitors the power supply voltage (back-up voltage). If the voltage goes below 10 V, the MICU sends an MICU message and will not store DTCs.

POWER SUPPLY VOLTAGE MONITORING FUNCTION INPUT AND OUTPUT REFERENCE

	Input	Output
MICU	Battery voltage	
B-CAN		MICU message

Entry Lights Control System (Ceiling Lights, Ignition Key Light)

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

The MICU controls the ceiling light and ignition key light ON/OFF based upon the input signals from each switch.

ENTRY LIGHTS CONTROL SYSTEM INPUT AND OUTPUT REFERENCE

	Input	Output
MICU	IG1 power supply Ignition key switch Driver's door switch Front passenger's door switch Left rear door switch Right rear door switch	Interior lights Ignition key light
B-CAN	Driver's door lock knob switch (LOCK) Keyless LOCK/UNLOCK signal Tailgate latch switch	

Back-up Lights

The MICU controls the back-up lights based upon the ignition switch (IG1) and the transmission range switch (R) signals.

BACK-UP LIGHTS INPUT AND OUTPUT REFERENCE

	Input	Output
MICU	Ignition switch (ACC) Transmission range switch (R)	Back-up lights

Turn Signal/Hazard Warning Lights

The MICU controls the turn signal/hazard warning lights based upon the input signals from the turn signal switch and the hazard warning switch.

TURN SIGNAL/HAZARD WARNING LIGHTS INPUT AND OUTPUT REFERENCE

	Input	Output
MICU	Hazard warning switch	Turn signal lights (left) Turn signal lights (right)
B-CAN	Turn signal switch (left) Turn signal switch (right)	

Collision Detection Signal (CDS)

The MICU controls the door lock actuators based upon the IG1 and the SRS signals.

COLLISION DETECTION SIGNAL (CDS) INPUT AND OUTPUT REFERENCE

	Input	Output
MICU	IG1 power supply	Door lock actuators (LOCK/UNLOCK) Tailgate release actuator (UNLOCK)

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

B-CAN	Front impact sensor Side impact sensor (first) Side impact sensor (second) SRS unit rollover signal	
-------	--	--

Automatic Lighting System

The MICU controls the automatic lighting system based upon the IG1, IG2, automatic lighting sensor signals, and B-CAN signals.

AUTOMATIC LIGHTING SYSTEM INPUT AND OUTPUT REFERENCE

	Input	Output
MICU	Ignition switch (IG1) Ignition switch (IG2) Automatic lighting sensor signal	Headlight back-up signal
B-CAN	Headlight switch (AUTO) Vehicle speed pulse signal Engine speed signal	AUTOLT messages

Headlight Washer Operation

The MICU controls the headlight washer system based upon the headlight switch and washer switch signals.

HEADLIGHT WASHER OPERATION INPUT AND OUTPUT REFERENCE

	Input	Output
MICU	Windshield washer switch	
B-CAN		Headlight washer messages

Key Interlock

The MICU controls the key interlock solenoid based upon the ignition switch (ACC), the transmission range switch, and the park-pin switch signals.

KEY INTERLOCK INPUT AND OUTPUT REFERENCE

	Input	Output
MICU	Ignition switch (ACC) Transmission range switch (P) Park-pin switch	Key interlock solenoid

Power Door Locks (Unlock all doors and tailgate at the same time)

The MICU controls the door lock actuators based upon the input signals of each switch.

MICU	Ignition key switch Driver's door switch	Door lock actuators (LOCK) Door lock actuators (UNLOCK) Driver's door lock actuator (UNLOCK) Tailgate release actuator (UNLOCK)
B-CAN	Driver's door lock knob switch (UNLOCK)	

HDS Inputs and Commands

Certain inputs happen so quickly that the HDS can not update fast enough. Hold the switch that is being tested while monitoring the Data List. This should give the HDS time to update the signal on the Data List.

Because the HDS software is updated to support the release for newer vehicles it is not uncommon to see system function tests that are not supported.

Make sure that the most current software is loaded.

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A

Check the PCM for DTCs and troubleshooting PCM (see **GENERAL TROUBLESHOOTING INFORMATION**) or F-CAN loss of communication errors first, then perform this diagnosis if the symptom is related to the B-CAN system.

Perform this diagnosis first if the symptom is related to the B-CAN system.

NOTE: Always turn the ignition switch within 3 seconds when prompted in the DTC troubleshooting procedures .

1. Check the symptom against this list of B-CAN related systems:

- Gauge control module
- Exterior lights
- Turn signals
- Entry light control
- Interior lights
- Safety indicators
- Rear window defogger
- HandsFreeLink
- Horns (security and panic)
- Chimes (key-in, seat belt, lights-on and parking brake)
- Power windows
- Power window/moonroof timer
- Wiper/washer
- Security
- Keyless entry
- Power door locks
- Climate control
- Key interlock
- Dash light brightness
- Driving position memory
- Power tailgate
- XM radio

- Immobilizer

Is the symptom related to the B-CAN system?

YES - Go to step 2.

NO - Go to the system troubleshooting for the system with the symptom.

2. Connect the HDS, then turn the ignition switch ON (II).

Fig. 7: Connecting HDS

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. From the BODY ELECTRICAL system select menu, select UNIT INFORMATION, and then select CONNECTED UNIT listed to see if it is communicating with the HDS.
 - MICU
 - Gauge control module
 - Combination switch control unit
 - Relay control module
 - Power seat control unit
 - HandsFreeLink control unit
 - Driver's MPCS unit
 - Rear MICU
 - AcuraLink control unit (XM receiver)
 - Power tailgate control unit
 - Climate control unit
 - Immobilizer-keyless control unit

NOTE:

- If the unit is communicating with the HDS, DETECT will be displayed.
- If the unit is not communicating, "Not Available" will be displayed.

Are all control units communicating with the HDS?

YES - Go to step 4.

NO - If any of the control unit are not communicating, go to **B-CAN System Diagnosis Test Mode B** (see). If all units are not communicating or only the MICU is communicating, go to **DTC B1000 troubleshooting** .

4. Select the system that has the problem from BODY ELECTRICAL system select menu, then select DTCs.

Are any DTCs indicated?

YES - Go to step 5.

NO - If the problem is related to one of the following items, go to **B-CAN System Diagnosis Test Mode C** , if the system does not stop or turn off. Go to **Troubleshooting - B-CAN System Diagnosis Test Mode D** if the system does not run or turn on.

- Exterior lights
- Turn signals
- Entry light control
- Interior lights
- Horns (security and panic)
- Power windows
- Wiper/washer
- Power door locks

If the problem is related to one of the following items, go to the troubleshooting for that individual system.

- Gauge control module
- Safety indicators
- Chimes (key-in, seat belt and lights-on)
- Rear window defogger (climate control)
- Security
- Keyless entry
- Climate control
- Key interlock
- Dash lights brightness
- Audio system
- Navigation

- Driving position memory
 - HandsFreeLink
 - Power tailgate
 - Immobilizer
5. Record all DTCs, and sort them by DTC type.
 6. Troubleshoot the DTC(s) in this order:
 - Battery voltage DTCs.
 - Internal error DTCs.
 - Loss of communication DTCs. Begin troubleshooting with the lowest number first (Example: if DTC B1008 and B1011 are retrieved, begin by troubleshooting B1008). Refer to loss of communication DTC cross reference chart (see [LOSS OF COMMUNICATION DTC CROSS-REFERENCE CHART](#)).
 - Signal error DTCs.

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE B

Perform this diagnosis if any of the control units are not communicating (Not Available is displayed in the HDS) as found by the B-CAN System Diagnosis Test Mode A (see [TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A](#)).

1. Using the HDS, select the system that has the symptom from BODY ELECTRICAL.
2. Select DTCs, and then check for loss of communication DTCs. Refer to loss of communication DTC cross reference chart.

Are any loss of communication DTCs indicated?

YES - Go to step 3.

NO - Replace the MICU.

3. Perform the input test for the unit not communicating with the HDS.

NOTE: **Troubleshoot Rear MICU loss of communication DTCs before troubleshooting AcuraLink control unit (XM receiver) the power tailgate control unit, and the power seat control unit DTC.**

UNIT NOT COMMUNICATING - INPUT TEST REFERENCE

Unit not communicating
MICU (see MICU INPUT TEST)
Gauge control module (see GAUGE CONTROL MODULE INPUT TEST)
Relay control module (see RELAY CONTROL MODULE INPUT TEST)
Driver's MPCS unit (see DRIVER'S MPCS UNIT INPUT TEST)

Combination switch control unit (see WIPER/WASHER SWITCH (COMBINATION SWITCH CONTROL UNIT) INPUT TEST)

Immobilizer-keyless control unit (see IMMOBILIZER-KEYLESS CONTROL UNIT INPUT TEST)

Rear MICU (see REAR MICU INPUT TEST)

Power seat control unit (see POWER SEAT CONTROL UNIT INPUT TEST)

Power tailgate control unit (see CONTROL UNIT INPUT TEST/REPLACEMENT)

Climate control unit troubleshooting (see CLIMATE CONTROL UNIT TROUBLESHOOTING)

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE C

Perform this diagnosis if a component that is controlled by the B-CAN system does not stop or turn off.

NOTE:

- If the component does not turn ON, go to B-CAN System Diagnosis Test Mode D .
- See the B-CAN system unit input/output index for a list of input and output devices and the control units that monitor the input and controls the output devices (see SYSTEM DESCRIPTION).
- Always turn the ignition switch within 3 seconds when prompted in the DTC troubleshooting procedures .

1. Check for DTCs by selecting the TEST MODE menu from the HDS.

Are any DTCs indicated?

YES - Go to B-CAN System Diagnosis Test Mode A (see).

NO - Go to step 2.

2. Turn OFF the switch that controls the malfunctioning component.
3. Select DATA LIST from the TEST MODE menu, and check the input of the switch that controls the component.

Does the HDS indicate the switch is OFF?

YES - Go to step 4.

NO - Go to step 6.

4. In DATA LIST, check the output signal of the malfunctioning component.

Is the output signal OFF?

YES - Go to step 5.

NO - Replace the control unit that controls the device that will not turn OFF.

5. Check the relay if applicable, then check for a short in the wire between the relay and the component, the relay and control unit, or the component and control unit.

Are the relay and the wire harness OK?

YES - Replace the control unit that controls the component that will not turn OFF.

NO - Replace the relay or repair the wire harness.

6. Check the switch, then check for a short in the wire between the switch and the control unit that monitors the switch.

Is the switch and wire harness OK?

YES - Replace the control unit that monitors the switch.

NO - Replace the switch or repair the wire harness.

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE D

Perform this diagnosis if a component that is controlled by the B-CAN system does not run or come on.

NOTE:

- If the component does not turn off or stop, go to **B-CAN System Diagnosis Test Mode C** .
- See the B-CAN system unit input/output index for a list of input and output devices and the control units that monitor the input and controls the output devices (see **SYSTEM DESCRIPTION**).
- Always turn the ignition switch within 3 seconds when prompted in the DTC troubleshooting procedures .

1. Check the fuse of the malfunctioning output device.

Is the fuse OK?

YES - Go to step 2.

NO - Replace the fuse and recheck.

2. Check for DTCs by selecting the TEST MODE menu from the HDS.

Are any DTCs indicated ?

YES - Go to **B-CAN System Diagnosis Test Mode A** .

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

NO - Go to step 3.

3. Turn ON the switch that controls the malfunctioning component.
4. Select DATA LIST from the TEST MODE menu, and check output signal for the malfunctioning component.

Is there an output signal?

YES - Go to step 5.

NO - Go to step 9.

5. Check the relay and ground, then check for an open or a short in the circuit for the malfunctioning component.

Are the relay and circuit OK ?

YES - Go to step 6.

NO - Replace the relay or repair the wire circuit.

6. Perform the function test for the malfunctioning component.

Does the output device pass the function test?

YES - Go to step 7.

NO - Replace the component.

7. With the malfunctioning output device connected, connect a voltmeter between the malfunctioning output device and body ground on the wire that the control unit uses to control the output device circuit.
8. Select MISC. TEST from the TEST MODE menu, and do the forced operation test of the malfunctioning component.

Is there a change in voltage (12 V to 0 V or 0V to 12 V)?

YES - Replace the component.

NO - Replace the control unit that controls the malfunctioning component.

9. Select DATA LIST from the TEST MODE menu, and make sure the switch signal input for the malfunctioning system indicates a change when operated.

Does the switch input indicate ON when the switch is ON?

YES - Replace the control unit that controls the malfunctioning component.

NO - Go to step 10.

10. Check the switch and its ground (if applicable), then check for an open or a short in the wire between the switch and the control unit that monitors it.

Are the switch and the wire harness OK?

YES - Replace the control unit that monitors the switch.

NO - Replace the switch or repair the wire harness.

TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE 1 AND TEST MODE 2 (WITHOUT THE HDS)

Special Tools Required

MPCS (MCIC) service connector 07WAZ-001010A

TEST MODE 1

Check the PCM for DTCs and troubleshoot PCM (see **GENERAL TROUBLESHOOTING INFORMATION**) or F-CAN loss of communication errors first, then perform this diagnosis if the HDS is not available.

1. Check the No. 7 (10 A) and No. 21 (7.5 A) fuses in the under-dash fuse/relay box.

Are the fuses OK?

YES - Go to step 2.

NO - Find and repair the cause of the blown fuse.

2. Remove the left kick panel (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**).
3. Turn the ignition switch ON (II), and move the ceiling light switch to the middle (door) position.
4. Connect the MPCS service connector (A) to the MCIC socket (B) in the under-dash fuse/relay box.

Fig. 8: Identifying MPCS Service Connector And MCIC Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Wait 5 seconds, and watch the ceiling lights. When the ceiling lights flash quickly once, and then go off, the system is in Test Mode 1.
6. Check for B-CAN DTCs indicated by the gauge control module LCD display while still in Test Mode 1. Push the odometer select/reset button to display the next code. After you get to the last code, the display shows END. If no DTCs are stored, the display will read NO.

Are any DTCs indicated?

YES - Go to Step 7.

NO - Go to Step 10.

7. Record all DTCs and sort them.
8. Troubleshoot the DTCs in this order:
 - Battery voltage DTCs
 - Internal error DTCs
 - Loss of communication DTCs (begin with the lowest number first; for example, if B1008 and B1011 are retrieved, troubleshoot B1008 first). Refer to loss of communication DTC cross reference chart (see **LOSS OF COMMUNICATION DTC CROSS-REFERENCE CHART**).
 - Signal error DTCs
9. Clear the DTCs by pressing and holding the select/ reset button for about 10 seconds. You will hear a beep to confirm the codes have been cleared. Operate the devices that failed, and recheck for codes.

Test Mode 2

10. Remove the MPCS service connector from the under-dash fuse/relay box socket for 5-10 seconds, then re-insert it to enter Mode 2. When the system enters Mode 2, the ceiling light will flash two times quickly and then go off.

NOTE: If the MPCS connector is disconnected for too short or too long of a time,

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

or the ignition switch is turned OFF, the system will return to Test Mode 1.

11. The following tables list the circuits that can be checked in Test Mode 2. Operate the switch that is most closely related to the problem. If the circuit is OK, the ceiling lights will blink once. If the circuit is faulty, there will be no indication.

MICU

MICU REFERENCE

Item
Driver's door switch (OPEN)
Front passenger's door switch (OPEN)
Left rear door switch (OPEN)
Right rear door switch (OPEN)
Audio security ground (when disconnected)
Mirror select switch (LEFT, CENTER, RIGHT)
Mirror switch (LEFT, RIGHT, UP, DOWN)
* The front passenger's and door lock knob switches must be in the locked position when beginning the test.

RELAY CONTROL MODULE

RELAY CONTROL MODULE REFERENCE

Item
Windshield wiper switch (AUTO STOP/PARK)
Hood switch (OPEN)

COMBINATION SWITCH CONTROL UNIT

COMBINATION SWITCH CONTROL UNIT REFERENCE

Item
Turn signal switch (LEFT)
Turn signal switch (RIGHT)
Combination light switch (ON; each position)
Dimmer switch (ON)
Passing switch (ON)
Windshield wiper switch (ON)
Intermittent wiper dwell timer
Windshield washer switch (ON)
Fog light switch (ON)
Rear window wiper switch (ON)
Rear window washer switch (ON)

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

REAR MICU

REAR MICU REFERENCE

Item
Tailgate latch switch (ON)
Tailgate outer handle switch (Without power tailgate) (ON)

DRIVER'S MPCS UNIT

DRIVER'S MPCS UNIT REFERENCE

Item
Power window master switch (Driver's window UP)
Power window master switch (Driver's window DOWN)
Power window master switch (Driver's window AUTO UP)
Power window master switch (Driver's window AUTO DOWN)
Power window master switch (Front passenger's window UP)
Power window master switch (Front passenger's window DOWN)
Power window master switch (Front passenger's window AUTO UP)
Power window master switch (Front passenger's window AUTO DOWN)
Power window master switch (Left rear window UP)
Power window master switch (Left rear window DOWN)
Power window master switch (Right rear window UP)
Power window master switch (Right rear window DOWN)
Driver's door key cylinder switch ⁽¹⁾ (LOCK)
Driver's door key cylinder switch ⁽¹⁾ (UNLOCK)
Driver's door lock switch (LOCK)
Driver's door lock switch (UNLOCK)
Driver's door lock knob switch (LOCK)
Driver's door lock knob switch (UNLOCK)
Left rear door lock knob switch ⁽²⁾ (UNLOCK)
Driving position memory switches (1,2, memo)
Left rear power window switch (UP)
Left rear power window switch (DOWN)
Fuel fill door opener switch (ON)
(1) A second key is necessary to check the key cylinder inputs. Be sure to rotate the key cylinder switch two times to each position (lock and lock, unlock and unlock) to ensure the door lock knob switch is in the appropriate position.
(2) The left rear door lock knob switches must be in the locked position when beginning the test.

GAUGE CONTROL MODULE

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

GAUGE CONTROL MODULE REFERENCE

Item
Parking brake switch (ON; parking brake applied)
Cruise control main SET/RESUME/CANCEL switch (ON; switch pressed)
Transmission range switch (P, R, N, D)
Washer fluid level switch (fluid removed) (Canada)
Brake fluid level switch (fluid removed)
Illumination control switches (+, -)
MID switches (Select/Reset, < INFO, INFO >)

POWER SEAT CONTROL UNIT

POWER SEAT CONTROL UNIT REFERENCE

Item
Power seat slide switch (FORWARD, BACKWARD)
Power seat front up-down switch (UP, DOWN)
Power seat rear up-down switch (UP, DOWN) Power seat recline switch (FORWARD, RECLINE)
Power tilt/telescopic steering switch (UP, DOWN, PUSH, PULL)

FRONT PASSENGER'S MPCS UNIT

FRONT PASSENGER'S MPCS UNIT REFERENCE

Item
Front passenger's door lock knob switch ⁽¹⁾ (UNLOCK)
Right rear door lock knob switch ⁽¹⁾ (UNLOCK)
Front passenger's door lock switch (LOCK)
Front passenger's door lock switch (UNLOCK)
Front passenger's power window switch (UP, DOWN, AUTO)
Right rear power window switch (UP, DOWN)
(1) The front passenger's and right rear door lock knob switches must be in the locked position when beginning the test.

Do the map lights indicate proper switch operation?

YES - Go to function and input test for the system related to the failure.

NO - Repair the open, short, or replace the faulty switch.

SLEEP AND WAKE-UP MODE TEST

1. Shift to the sleep mode:

Turn the ignition switch to LOCK (0), and close the driver's door. If the MICU receives no signals from the inputs listed below, it will go into sleep mode in less than 40 seconds.

Driver's door lock switch (LOCK or UNLOCK)

Driver's door key cylinder switch (LOCK or UNLOCK)

Front passenger's door lock switch (LOCK or UNLOCK)

Tailgate latch switch (Tailgate closed)

Hazard warning switch (OFF)

Power tailgate outer handle switch

Power tailgate inside switch

Power tailgate opener switch

2. Confirm the sleep mode:

Measure the frequency on the B-CAN communication line (LT GRN wires); there should be 0 Hz in the sleep mode. Check the parasitic draw at the battery while shifting into the sleep mode; amperage should change from about 2.6 A to less than 35 mA.

3. Shift to the wake up mode:

When the ignition switch is turned ON (II), the MICU, and all B-CAN system components wake up. When any switch in the multiplex integrated control system is turned on, a message is sent to the related control unit(s) to command the desired function. After confirming the sleep mode, look in the following table for the switch most related to the problem. Operate that switch and see if its control unit wakes up.

NOTE: If any control unit is faulty and will not wake up, several circuits in the system will malfunction at the same time. In the table below, the control unit is followed by a list of the switches and input signals that can wake it up.

Door switches (door open)

Driver's door lock switch (LOCK or UNLOCK)

Driver's door lock knob switch (LOCK or UNLOCK)

Driver's door key cylinder switch (LOCK or UNLOCK)

Front passenger's door lock switch (LOCK or UNLOCK)

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

Front passenger's door lock knob switch (LOCK or UNLOCK)

Left rear door lock knob switch

Right rear door lock knob switch

Tailgate latch switch (Tailgate open)

Hood switch (hood open)

Hazard warning switch (ON)

Combination light switch (Parking, Headlight, Dimmer, Passing ON)

Ignition key switch (key inserted)

DTC TROUBLESHOOTING

DTC B1000: COMMUNICATION BUS LINE ERROR

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0), and then back ON (II).
3. Wait for 6 seconds or more.

2008 Acura MDX

2007-09 ACCESSORIES AND EQUIPMENT Multiplex Integrated Control System - MDX

4. Check for DTCs with the HDS.

Is DTC B1000 indicated?

YES - Go to step 5.
